valves

Needle Valve

Low Pressure, Single Ferrule 15,000 psi (1034 bar)

10V2 and SW Series (“SpeedBite”)

Principle of Operation:

The Low Pressure (15,000 psi maximum), otherwise known as “SpeedBite” Needle Valves are designed for applications between traditional compression fittings and the Parker Autoclave Engineers’ Medium Pressure Cone and Thread products that are designed for high flow and high pressure. SpeedBite Valves are engineered for use with annealed ASTM A269 316 (and similar) Stainless Steel tubing designed by Parker Autoclave Engineers to a controlled hardness. SpeedBite valves employ a bite-type compression style single ferrule that is manually “set”. 1-1/4 rotation from tube grip forces the ferrule into tapered seat and causes the leading edge of ferrule to bite into the tubing, creating a shoulder for positive mechanical support of the tubing. When correctly installed, connection strength far exceeds the burst pressure of the tubing utilized.

Low Pressure Valve Features:

Temperature Rated -100°F (-73°C) to 650°F (343°C)

- Designed for use with Low Pressure “SpeedBite” single ferrule compression fittings and tubing
- 10V2 Series valve design provides for a 1/8" tube size connection
- SW Series valves are constructed for tube sizes from 1/4" to 1/2" OD
- UNS S31600 cold worked 316 SS body construction as standard. (Optional materials available)
- Non-rotating stem prevents stem/seat galling
- Metal-to-metal seating achieves bubble-tight shut-off, longer stem/seat life, greater durability for repeated on/off cycles and excellent corrosion resistance. These valves can be used with liquid and gas.
- PTFE packing below stem threads provides dependable stem and body sealing. Optional packing materials available.
- Choice of Vee (Shutoff) or Regulating (Flow Control) stem tips
- Optional N-Dura Stem and/or Replaceable Seat Coating or Stellite material option for severe service available
- Available in five body patterns

Traceability is ensured by use of heat and purchase order codes etched on valve body that also includes model number, MAWP rating, and material type references. All valves include compression sleeve and gland nut unless requested otherwise. Parker Autoclave Engineers’ valves are complemented by a complete line of low pressure fittings, tubing, check valves, relief valves, and line filters.

All Parker Autoclave Engineers products are designed in accordance with ASME B31.3 Chapter IX High Pressure Piping standards.

ENGINEERING YOUR SUCCESS.

10V2 and SW Series: Pressures to 15,000 psi (1034 bar)

Tube Outside Diameter Size (inches)	Connection Type	Orifice Size Inches (mm)	Rated C_v^*	Pressure Rating psi (bar) @Room Temperature**
1/8 (10V2 Series)	W125	0.094 (2.39)	0.12	15,000 (1034)
1/4	SW250	0.188 (4.77)	0.65	15,000 (1034)
3/8	SW375	0.250 (6.35)	0.95	15,000 (1034)
1/2	SW500	0.375 (9.52)	1.90	10,000 (690)

Notes

* C_v values shown are for 2-way straight valve pattern. For 2-way angle patterns, increase C_v value 50%.

** Maximum Allowable Working Pressures decrease as temperatures increase see pressure/temperature rating guide in Technical Information section.

Formula for converting C_v to volumetric flow can be found in Technical Information section

10V2 and SW Series Flow Curve for Vee and Regulating Stem Valves

To ensure proper fit use Parker Autoclave tubing

Valve Packing Options:

Standard Parker Autoclave valves with PTFE packing may be operated from 0° (-18°C) to 450°F (232°C). Extreme temperature packing for service from -100°F (-73°C) to 650°F (343°C) by adding the following suffixes to catalog order number.

B Cryogenic trim materials and PTFE required when below 0°F (-18°C) -100°F (-73°C).

TG Standard valve with PTFE glass packing -100°F (-73°C) to 600°F (316°C). (See also -B option above when below 0°F (-18°C))

GY Standard valve with Graphite Yarn packing to 650°F (343°C).

Parker Autoclave Engineers does not recommend compression sleeve connections below -100°F (-73°C) or above 650°F (343°C). For additional valve options, contact your Sales Representative. (See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Ordering Guide:

Common valve option details can be found on pages 6 & 7. The part number and option ordering matrix is given below. 10V/SW Series "SpeedBite" valves are furnished complete with connection components, unless otherwise specified.

Building a Part Number: <i>Example: SW4071</i>						
Example Part Number:	SW	4	07	1	-	XX
Ordering Parameters/Options:	Valve Series	Outside Diameter Tube Size	Stem/Seat Type	Body Pattern		Options
Table Reference: (see below)	A	B	C	D		E

A - Valve Series	
10V	Low Pressure Needle Valve (1/8" Tube Size only)
SW	Low Pressure Needle Valve

B - Outside Diameter Tube Size	
2	1/8" (10V only)
4	1/4"
6	3/8"
8	1/2" (10,000 psi maximum)

C - Stem/Seal Type (see page 6 for optional Stem Types)	
07	Non-Rotating Vee Stem (on-off service)
08	Non-Rotating Regulating Stem (tapered tip for regulating and shutoff)
87	Vee Stem with Replaceable Seat
88	Regulating Stem with Replaceable Seat

Notes:
 Valve Manuals can be found on our website at www.Autoclave.com.
 Connection, Running and Seating Torques can be found in the product manual or in our Tools and Installation Catalog Section
 Valves that have not been cycled for a substantial period of time may require higher initial actuation torque.
 Speedbite connections are set by making 1-1/4 turns from WRENCH tight (point beyond finger tight where torque to tighten suddenly increases and sleeve begins to grip tubing.) Installation instructions can be found in Tools & Installation brochure.

*Replaceable seat option is sold with two (2) seat surfaces 180° apart.

D - Body Pattern	
1	Two-Way Straight
2	Two-Way Angle
3	Three-Way, Two on Pressure
4	Three-Way, One on Pressure
5	Three-Way, Two Stem Manifold Valve

E - Options (choose as many as necessary)	
For additional valve options see pages 6-7 or contact factory.	
B	All 316 SS materials required when below 0°F (-18°C)
TG	PTFE Glass (25%) Packing (to 600°F)
GY	Graphite Packing (to 650°F)
HC	Hastelloy C-276***
MO	Monel***

Note: Contact factory for 1/16" tube size or see MVE Series. Pneumatic and electric actuators are available for these valves, see associated brochures for details.

316 SS valve bodies are cold worked and not suitable for use in NACE (ISO 15156) applications. If required, contact factory for options.

*** Special Materials often have reduced MAWP ratings, see Technical brochure for assistance and for additional material options.

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Basic Repair Kits for 316 SS Material:

Basic Repair Kit for 316 SS Material					
Stem Type		Outside Diameter Tube:			
		1/8" (10V2 Series)	1/4"	3/8"	1/2"
2 Way Straight / 2 Way Angle / 3 Way	VEE	R10V207	RSW407	RSW607	RSW807
	REG	R10V208	RSW408	RSW608	RSW808
2 Way, Replaceable Seat and Stem	VEE	R10V2872	RSW4872	RSW6872	RSW8872
	REG	R10V2882	RSW4882	RSW6882	RSW8882
3 Way, 2 Stem Manifold	VEE	R10V2075	RSW4075	RSW6075	RSW8075
	REG	R10V2085	RSW4085	RSW6085	RSW8085
When ordering for valves bought with additional suffix options, please include those exact suffix codes when ordering repair kit. (Example: the stem for a manual valve is manufactured differently for a pneumatically actuated valve and the repair kit must include the exact actuator suffix codes). Valve Manuals can be found on our website at www.Autoclave.com . Connection, Running and Seating Torques can be found in the product manual or in our Tools and Installation Catalog Section

Material of Construction:

Item #	Description	Material
1	Hex Nut	300 Series SS
2	Thrust Washer	17-4 PH
3	Stem Sleeve	304 SS
4	Vee Stem (3/8" SW shown)	316 SS
5	Packing Gland	AMPCO 18
6	Thrust Washer	17-4 PH
7	Packing Washer	AMPCO 45
8	Bottom Washer	316 SS
9	Handle Assembly	316 SS
10	Fill HD Screw, #10-24	18-8 SS
11	Locking Device	302 SS
12	Packing	PTFE
13	Valve Body, (3/8" SW shown)	CW 316/316L SS
•	Replaceable Seat	17-4 PH

Typical spare parts found in Repair Kits (• indicates part not shown)

Panel Hole Sizes:

Valve Size	Inches			
	A	B	Screw Size	G
10V2	1.12	.22	#10-24	.62
4 and 6	1.25	.22	#10-24	.75
8	1.375	.22	#10-24	1.00

Use suffix -PM for extra mounting hardware

Needle Valve Panel Mount

Valve Options: (For Actuator Options please reference specific Actuator brochure)

Pneumatic Valve Actuators:

The need to control process and vent valves from a remote location makes air operated valves a vital component to many processing operations. All Parker Autoclave Engineers' valves are available with piston type actuators. Five sizes of air actuators (light, mini-light, medium, heavy duty or extra heavy, single and double stage) are offered to meet the service requirements of Parker Autoclave Engineers' Low, Medium and High Pressure needle valves. Both air-to-open (normally closed) and air-to-close (normally open) designs are included in the product line. Optional air to open AND close actuators available upon request. Please see our Pneumatic Valve Actuator Brochure to help size the proper actuator for your application.

Electric Valve Actuators:

Remotely controlling process flow at high pressure enhances safety and lowers labor costs. Parker Autoclave Engineers developed a flow control valve available in several models including weatherproof and explosionproof options.

The Electrically Actuated Shut-off/Flow Regulating Actuator (FRC Series) is available for all sizes of 10V2 and SW Series "SpeedBite" valves up to full working pressure. Explosion proof version is rated for hydrogen service and can withstand wide process temperature ranges.

Stem Options:

Most Parker Autoclave Engineers' valves are available with either Vee (on-off) or Regulating (Flow Control) Stems in our standard valve body seat or with our optional replaceable seat as shown below:

VEE Stem

The Vee stem is used for direct on-off, metal-to-metal shut-off with quick-opening flow characteristics.

Regulating Stem

In some applications, more precise flow control is required than is possible with a Vee stem. For these cases, Autoclave offers a non-rotating, two-piece regulating stem which can be used for both control and shut-off. While it is not as precise as the control associated with the MicroMetering stem, especially with smaller flows, it does offer substantially better control than the Vee stem.

Replaceable Seat (with Vee Stem)

Replaceable seat option is only available with Right-Angle Style body. Replaceable seat is supplied as standard with an additional seat - rotate to use second side. Can be used with either stem type. Options include Stellite material or N-Dura coating to increase service life.

Valve Options: (For Actuator Options please reference specific Actuator brochure)

High/Low Temperature Extension:

Not typically needed for 10V2/SW Series valves as temperature range does not exceed the barriers below, but option is shown for consideration.

- HT High Temperature
- LT Low Temperature

Valve Series	Outside Diameter Tube Size (inches)	Dimensions "A" inches (mm)
10V2 & SW (this option not typically needed)	1/8"	5.38 (137)
	1/4"	5.50 (140)
	3/8"	5.50 (140)
	1/2"	6.31 (160)

HT option code includes Graphite (-GY) packing
 LT option code includes 316 SS Trim material and PTFE packing

ES Stem Extender:

Stem extenders are offered for High and Low temperature operation or to extend through panel or barricade.

To order valve with Stem Extender, add "ES-" and length (6", 12", 18", 24") to beginning of valve part number e.g. ES12-SW6071. Other lengths to special order.

To order Stem Extender only, provide valve model prefix e.g. ES12-SW6. Handle not included – use same provided with original valve.

Needle Valve Clam Shell Handle Lockout:

(order separately using part numbers shown below, padlock not included)

Clam Shell Handle locks are provided to lockout valves in open or closed position preventing unauthorized personnel from actuating valve during shutdown or emergency situations. This clamshell design is available in four (4) sizes dependent on handle length:

- P/N AE004855 – 1" to 2.5" handle length
- P/N 90088 – 2.5" to 5.0" handle length
- P/N 90194 – 6.5" to 10" handle length
- P/N AE004350 – 8" to 13" handle length

Needle Valve

Medium Pressure Cone & Thread 20,000 psi (1380 bar)

15SM and 20SM Series

Principle of Operation:

SM Series Valves are designed specifically for use with matching orifice Medium Pressure Cone & Thread Fittings and Tubing for the most efficient flow path possible using Cone & Thread style connections. Designed for a maximum of 20,000 psi MAWP using high tensile strength UNS S31600 cold worked 316 Stainless Steel material as standard, we include larger ID tubing rated to 15,000 psi (15SM valves) for even higher flow rate capability.

Medium Pressure Valve Features:

Temperature Rated -423° to 1200°F (-252° to 650°C) with associated packing/material options

- Designed for use with Medium Pressure cold worked 316/316L stainless steel tubing as standard
- 15SM Series Hi-Flow valves available in sizes from 9/16" to 1-1/2" (See matched-bore tubing)
- 20SM Series valves available in sizes from 1/4" to 1" (See matched-bore tubing)
- UNS S31600, CW 316 Stainless Steel body construction as standard. See Technical brochure for additional material options
- Non-rotating stem prevents stem/seat galling
- Metal-to-Metal seating achieves bubble-tight shut-off, longer stem/seat life, greater durability for repeated on/off cycles and excellent corrosion resistance. These valves can be used with liquid or gas.
- PTFE packing below stem threads provides dependable stem and body sealing. Optional packing materials available.
- Choice of Vee (shutoff) or Regulating (Flow Control) stem tips
- Replaceable Seat Option available with Right Angle 2-way body style
- Optional N-Dura Stem and Seat coating or Stellite material option for severe service available
- Pneumatic and Electric Actuator Options available - see page 8 for more details

Traceability is ensured by use of heat and purchase order codes etched on valve body that also includes model number, MAWP rating, and material type references. All valves include connection collar and gland nut unless requested otherwise. Parker Autoclave Engineers' valves are complemented by a complete line of Medium Pressure Cone & Thread fittings, tubing, check valves, relief valves, and line filters.

Note: SM Series fully replaces 20SC, 20SV, and 15SV Series. 15SM Series replaces 10SM Series. 20SM and 15SM repair kits are used to repair these valve types.

All Parker Autoclave Engineers products are designed in accordance with ASME B31.3 Chapter IX High Pressure Piping standards.

ENGINEERING YOUR SUCCESS.

SM Series Needle Valve: Pressures to 20,000 psi (1379 bar)

Tube Outside Diameter Size (inches)	Connection Type	Orifice Size Inches (mm)	Rated C_v^*	Pressure Rating psi (bar) @Room Temperature**
1/4 (20SM4)	SF250CX20	0.125 (3.18)	0.31	20,000 (1379)
3/8 (20SM6)	SF375CX20	0.219 (5.56)	0.75	20,000 (1379)
9/16 (20SM9)	SF562CX20	0.312 (7.92)	1.30	20,000 (1379)
3/4 (20SM12)	SF750CX20	0.438 (11.13)	2.50	20,000 (1379)
1 (20SM16)	SF1000CX20	0.562 (14.27)	4.40	20,000 (1379)
9/16 (15SM9)	SF562CX10	0.359 (9.12)	1.75	15,000 (1034)
3/4 (15SM12)	SF750CX10	0.516 (13.10)	2.80	15,000 (1034)
1 (15SM16)	SF1000CX10	0.688 (17.48)	5.20	15,000 (1034)
1 1/2 (15SM24)	SF1500CX	0.937 (23.80)	14	15,000 (1034)

Notes

* C_v values shown are for 2-way straight valve pattern. For 2-way angle patterns, increase C_v value 50%. (Based on water). Formula for converting C_v to volumetric flow can be found in Technical Information section.

** Maximum Allowable Working Pressures decrease as temperatures increase - see pressure/temperature rating guide in Technical Information section.

SM Series Flow Curve for Vee and Regulating Stem Valves

To ensure proper fit use Parker Autoclave tubing

Valve Packing Options:

Standard Parker Autoclave Engineers valves with PTFE packing may be operated from 0°F (-18°C) to 450°F (232°C). High and Cryogenic temperature packing and/or extended stuffing box are available for service from -423°F (-252°C) to 1200°F (650°C) by adding the following suffixes to catalog order number:

- B Cryogenic trim materials and PTFE packing required when below 0°F (-18°C) to -100°F (-73°C)
- LT Extended packing option with PTFE packing and Cryogenic trim materials to -423°F (-252°C)
- TG Standard valve with PTFE-Glass packing -100°F (-73°C) to 600°F (316°C) (See also -B option above when below 0°F (-18°C))
- GY Standard valve with Graphite Yarn packing 32°F (0°C) to 800°F (427°C). Used when selecting HT option. **(Note: 3/4" valve rated 8000 psi (552 bar) and 1" rated 6000 psi (412 bar) max with Graphite Yarn packing.)**
- HT Extended stuffing box valve with Graphite Braided Yarn packing to 1200°F (650°C)

For the effect on max pressure due to High Temperatures, please see "Technical Brochure" in main catalog.

Note: Refer to Tools, Installation & Operation catalog for proper connection, packing, seating & running torques.

Ordering Guide:

For complete information on available stem types, optional connections and additional valve options, see pages 8-9 or contact your Sales Representative. SM Series valves are furnished complete with connection components, unless otherwise specified.

Building a Part Number: Example: 20SM4071

Example Part Number:	20SM	4	07	1	XX
Ordering Parameters/Options:	Valve Series	Outside Diameter Tube Size	Stem/Seat Type	Body Pattern	Options
Table Reference: (see below)	A	B	C	D	E

A - Valve Series

15SM	15,000 psi Medium Pressure Needle Valve (9/16" thru 1 1/2" sizes)
20SM	20,000 psi Medium Pressure Needle Valve (1/4 thru 1" sizes)

B - Outside Diameter Tube Size

4	1/4" (20SM only)
6	3/8" (20SM only)
9	9/16"
12	3/4"
16	1"
24	1-1/2" (15SM only)

C - Stem/Seal Type (see page 8 for optional stem types)

07	Non-Rotating Vee Stem (on-off service)
08	Non-Rotating Regulating Stem (tapered tip for regulating and shutoff)
87	Vee Stem with Replaceable Seat (angle valve only)
88	Regulating Stem with Replaceable Seat (angle valve only)

Notes:

Valve Manuals can be found on our website at www.Autoclave.com. Connection, Running and Seating Torques can be found in the product manual or in our Tools and Installation Catalog Section. Valves that have not been cycled for a substantial period of time may require higher initial actuation torque.

*Replaceable seat option is sold with two (2) seat surfaces 180° apart.

D - Body Pattern

1	Two-Way Straight
2	Two-Way Angle
3	Three-Way, Two on Pressure
4	Three-Way, One on Pressure
5	Three-Way, Two Stem Manifold Valve

E - Options (choose as many as necessary)

For additional valve options see pages 8 & 9 or contact factory.	
B	Low temperature service below 0°F (-18°C) (included in LT code)
LT	Low Temperature Extension (to -423°F) (includes PTFE packing)
TG	PTFE Glass (25%) Packing (to 600°F)
GY4	Graphite Yarn Packing (to 800°F)
HT4	High Temperature Extension (to 1200°F) (includes GY packing)
K	Antivibration Gland replaces standard gland
*SOG	NACE Material, Hardness Verification/Certificate
HYG	Hydrogen/Helium upgrade/Seat Testing
... 2507	UNS 32750, 2507 Super Duplex Wetted Materials
... IN625	UNS N06625 Inconel 625 Wetted Materials
... HC	UNS N10276 Hastelloy C276 Wetted Materials
Pneumatic and Electric Actuator Options - see individual brochures for Suffix Codes Other materials available upon request. See Technical Brochure for list of common material options.	

Notes:

316 SS valve bodies are cold worked and not suitable for use in NACE (ISO 15156) applications. If required, contact factory for options.

* SOG suffix also changes CW 316 SS Body material to Annealed 316 SS suitable for NACE service, Pressure reduction of 60% possible

*** Special Materials often have reduced MAWP ratings, see Technical brochure for assistance and for additional material options.

4 - GY packing increases friction on stem which can limit max pressure in larger valves (3/4" is limited to 8,000 psi and 1" is limited to 6000 psi)

Note: use of optional material only changes "wetted parts" to selected material. Items like collars and glands remain CW 316/316L SS. Use **-SOG** (Includes hardness check for NACE) or **-AP** suffix

Panel Hole Size:

Needle Valve Panel Mount

Valve Size	Inches			
	A	B	Screw Size/Thread	D
4 & 6	1.25	.22	10 - 24	.75
9	1.375	.22	10 - 24	1.00
12	1.75	.22	10 - 24	1.12
16	2.50	.22	10 - 24	1.62
24	N/A	N/A	N/A	N/A
Panel Mount Screw Length -1/4" min. (2 each required) (PM option no longer available)

H* - Dimension is with stem in closed position
 All dimensions for reference only and subject to change • For prompt service, Parker Autoclave stocks select products. Consult factory.

Valve Options:

Pneumatic Valve Actuators:

The need to control process and vent valves from a remote location makes air operated valves a vital component to many processing operations. All Parker Autoclave Engineers' valves are available with piston type actuators. Five sizes of air actuators (light, mini-light, medium, heavy duty or extra heavy, single and double stage) are offered to meet the service requirements of Parker Autoclave Engineers' Low, Medium and High Pressure needle valves. Both air-to-open (normally closed) and air-to-close (normally open) designs are included in the product line. Optional air to open AND close actuators available upon request. Please see our Pneumatic Valve Actuator Brochure to help size the proper actuator for your application.

Electric Valve Actuators:

Remotely controlling process flow at high pressure enhances safety and lowers labor costs. Parker Autoclave Engineers developed a flow control valve available in several models including weatherproof and explosionproof options.

The Electrically Actuated Shut-off/Flow Regulating Actuator (FRC Series) is available for most of our SM Series Valves through 9/16" tubing size and full working pressure. Explosion proof version is rated for hydrogen service and can withstand wide process temperature ranges.

Stem Options:

Most Parker Autoclave Engineers' valves are available with either Vee (on-off) or Regulating (Flow Control) Stems in our standard valve body seat or with our optional replaceable seat as shown below. For severe service stem (and replaceable seat if ordered) can be offered with N-Dura Diamond-Like coating (-CS suffix or -CSS (coated stem & seat)) or made from Stellite (-SS or -SSRS (Stellite stem, replaceable seat)).:

VEE Stem

The Vee stem is used for direct on-off, metal-to-metal shut-off with quick-opening flow characteristics.

Regulating Stem

In some applications, more precise flow control is required than is possible with a Vee stem. For these cases, Autoclave offers a non-rotating, two-piece regulating stem which can be used for both control and shut-off. While it is not as precise as the control associated with the MicroMetering stem, especially with smaller flows, it does offer substantially better control than the Vee stem.

**Replaceable Seat
(with Vee Stem)**

Replaceable seat option is only available with Right-Angle Style body. Replaceable seat is supplied as standard with an additional seat - rotate to use second side. Can be used with either stem type. Options include Stellite material or N-Dura coating to increase service life.

Valve Options:

High/Low Temperature Extension:

Used in extreme temperature applications to move packing from flow stream with heatsink to moderate temperature.

- HT High Temperature (over 800°F (427°C))
- LT Low Temperature (under -100°F (-73°C))

Valve Series	Outside Diameter Tube Size (inches)	Dimensions "A" inches (mm)
15SM and 20SM	1/4"	5.50 (140)
	3/8"	5.50 (140)
	9/16"	6.31 (160)
	3/4"	6.31 (160)
	1"	6.31 (160)
	1-1/2"	13.1 (333)

HT option code includes Graphite (-GY) packing
 LT option code includes 316 SS Trim material and PTFE packing

ES Stem Extender:

Stem extenders are offered for High and Low temperature operation or to extend through panel or barricade.

To order valve with Stem Extender, add "ES-" and length (6", 12", 18", 24") to beginning of valve part number e.g. ES12-20SM6071. Other lengths to special order.

To order Stem Extender only, provide valve model prefix e.g. ES12-20SM6. Handle not included – use same provided with original valve.

Needle Valve Clam Shell Handle Lockout:

(order separately using part numbers shown below, padlock not included)

Clam Shell Handle locks are provided to lockout valves in open or closed position preventing unauthorized personnel from actuating valve during shutdown or emergency situations. This clamshell design is available in four (4) sizes dependent on handle length:

- P/N AE004855 – 1" to 2.5" handle length
- P/N 90088 – 2.5" to 5.0" handle length
- P/N 90194 – 6.5" to 10" handle length
- P/N AE004350 – 8" to 13" handle length

Assembly Instructions

SM Series Medium Pressure Needle Valve - Pressures to 20,000 psi (1379 bar)

SM Medium Pressure Connection: Step by Step Assembly Instructions

Step 1	Step 2	Step 3																				
																						
<p>Insert Coned and Threaded Nipple through Gland (Typical Tee Fitting Assembly consisting of Fitting Body, Collar, Gland, and Coned and Threaded Nipple or Tube End.)</p>	<p>Thread Collar turning (Reverse Threaded to prevent rotation during torque process) onto Coned and Threaded Nipple end.</p>	<p>For proper Collar placement, thread Collar onto Nipple leaving 1 to 2 full threads exposed on Fitting side of Collar. Lubricate Gland Threads with anti-seize compound and tube tip with process compatible lubricant (do not use metal-flake type)</p>																				
Step 4	Step 5	SM Medium Pressure Gland Torque

1-1/2" MP-15Ksi	200 (272)																					
<p>Insert Tube/Gland assembly into Fitting body, turning clockwise approximately 4-5 threads (if unable to turn full distance by hand, look for misalignment issues with tubing and correct for proper seal).</p>	<p>Use Torque Wrench to properly set (see chart in next frame) Cone & Thread Connections. (Available with wrench adapters in Tools and Installation brochure)</p>	<p>For torques and optional materials (lower pressures), see Tools and Installation Catalog 02-0149SE</p>																				

Needle Valve

High Pressure Cone & Thread 60,000 psi, 100,000 psi, 150,000 psi

30SC, 43SC, 30VM, 40VM, 60VM, 100VM,
and 150V Series

Principle of Operation:

Since 1945, Parker Autoclave Engineers (PAE) has designed and built premium quality valves, fittings and tubing. Our valves are designed specifically for use with High or Ultra High Pressure Fittings and Tubing for the most efficient flow path possible using Cone & Thread style connections. Designed in accordance with ASME 31.3 Chapter IX High Pressure Piping standards.

High Pressure Valve (to 60,000 psi) Features:

- Temperature Rated -423° to 1200°F (-252° to 650°C) with options
- Manufactured with UNS S31600 cold worked 316 stainless steel made to PAE proprietary standard
- Various designs cover valve sizes 1/4" to 1" that use the "F" Series Connections (see Tools & Installation)
- Non-Rotating stem prevents stem/seat galling
- Metal-to-metal seating achieves bubble-tight shut-off, longer stem/seat life in abrasive flow, greater durability for repeated on/off cycles and excellent corrosion resistance
- For dependable stem and body sealing 30SC, 43SC, and 30VM valves are furnished with PTFE packing; the 40VM and 60VM valves feature nylon/leather/nylon packing below threads and all can be used on liquids and gases
- Choice of Vee (Shutoff) or Regulating (Flow Control) stem tips available with optional N-Dura or Stellite material options for severe service

Series 100VM: Pressures to 100,000 psi (6900 bar) features:

- Cold-worked type 316 or 15-5PH stainless steel body with aluminum bronze packing gland and on-rotating stem
- Nylon/leather/nylon packing below stem threads
- Sizes from 1/4" to 9/16" that use the "F***C100" Series Connections (see Tools & Installation)

Series 150V: Pressures to 150,000 psi (10340 bar) features:

- Cylindrical body of high strength 15-5PH stainless steel with aluminum bronze packing gland. Tool steel non-rotating stem with replaceable seat of nickel maraging steel. Stem must be actuated with torque wrench see page 22 for torque values
- Wedge-type PTFE and leather packing below stem threads with beryllium-copper Parker Autoclave Anti-Extrusion Back up Rings
- Designed for use with 5/16" 150 Ksi tubing only, Vee stem tip (Shutoff) only

Parker Autoclave Engineers valves are complemented by a complete line of high pressure fittings and tubing. Traceability is ensured by use of heat and purchase order codes etched on valve body that also include model number, MAWP rating, and material type references. All valves include connection collar and gland nut unless requested otherwise.

ENGINEERING YOUR SUCCESS.

30SC/43SC Series: Pressures to 43,000 psi (2965 bar)

For use with 1" High Pressure Tubing w/.438" ID

Tube Outside Diameter Size (inches)	Connection Type	Orifice Size Inches (mm)	Rated C_v^*	Pressure Rating psi (bar) @Room Temperature**
1 (30SC Series)	F1000C43	0.438 (11.12)	2.6	30,000 (2068)
1 (43SC Series)	F1000C43	0.438 (11.12)	2.6	43,000 (2965)

Notes

* C_v values shown are for 2-way straight valve pattern. For 2-way angle patterns, increase CV value 50%. (Based on water). Formula for converting C_v to volumetric flow can be found in Technical Information section.

** Maximum Allowable Working Pressures decrease as temperatures increase - see pressure/temperature rating guide in Technical Information section.

30SC and 43SC Series Flow Curve for Vee and Regulating Stem Valves

To ensure proper fit use Parker Autoclave tubing

Valve Packing Options:

Standard Parker Autoclave Engineers valves with PTFE packing may be operated from 0°F (-17.8°C) to 450°F (232°C). High and Cryogenic temperature packing and/or extended stuffing box are available for service from -423°F (-252°C) to 1200°F (650°C) by adding the following suffixes to catalog order number:

- B** Cryogenic trim materials and PTFE packing required when below 0°F (-18°C) to -100°F (-73°C)
- LT** Extended stuffing box valve with PTFE packing and Cryogenic trim materials to -423°F (-252°C)
- TG** Standard valve with PTFE-Glass packing -100°F (-73°C) to 600°F (316°C) (See also -B option above when below 0°F (-18°C))
- GY** Standard valve with Graphite Yarn packing 32°F (0°C) to 800°F (427°C). Used when selecting HT option. (Note: 1" valve using graphite yarn packing has significant increase in torque needed to actuate valve at pressure. Contact factory with application detail for assistance.)
- HT** Extended stuffing box valve with Graphite Yarn packing to 1200°F (650°C)

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Ordering Guide:

For complete information on available stem types, optional connections and additional valve options, see pages 26-27 or contact your Sales Representative. 30SC & 43SC Series valves are furnished complete with connection components, unless otherwise specified. See High Pressure Fittings and Tubing brochure for compatible products.

Building a Part Number: Example: 30SC16071

Example Part Number:	30SC	16	07	1	XX
Ordering Parameters/Options:	Valve Series	Outside Diameter Tube Size	Stem/Seat Type	Body Pattern	Options
Table Reference: (see below)	A	B	C	D	E

A - Valve Series	
30SC	High Pressure Needle Valve
43SC	High Pressure Needle Valve

B - Outside Diameter Tube Size	
16	1"

C - Stem/Seat Type	
07	Non-Rotating Vee Stem (on-off service)
08	Non-Rotating Regulating Stem (tapered tip for regulating and shutoff)
87	Vee Stem with Replaceable Seat (angle valve only)
88	Regulating Stem with Replaceable Seat (angle valve only)

Notes: Valves that have not been cycled for a substantial period of time may require higher initial actuation torque.

Valve Manuals can be found on our website at www.Autoclave.com, Connection, Running and Seating Torques can be found in the product manual or in our Tools and Installation Catalog Section.

D - Body Pattern	
1	Two-Way Straight
2	Two-Way Angle
3	Three-Way, Two on Pressure
4	Three-Way, One on Pressure
5	Three-Way, Two Stem Manifold Valve

E - Options	
K	Antivibration Gland (replaces standard gland)
B	All 316 SS Materials required when below 0°F (-18°C) (included in LT)
LT	Low Temperature Extension (to -423°F) (includes PTFE packing)
TG	PTFE Glass (25%) Packing (to 600°F)
GY	Graphite Yarn Packing (to 800°F) [GY Packing increases Handle Torque, contact factory]
HT	High Temperature Extension (to 1200°F) (includes GY packing)

Pneumatic Actuator Options - see Actuator brochure for Suffix Codes

Other materials available upon request. See Technical Brochure for list of common options. See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.

Material of Construction:

Item #	Description	Material
1	Lock Nut	316 SS
2	Hex Socket Set Screw	300 Series SS
3	Locking Device	302 SS
4	Round Screw, #10-24	300 Series SS
5	Packing Washer	AMPCO 45
6	Packing	Teflon
7	Bottom Washer	316 SS
8	One Piece Stem	316 SS
9	Thrust Washer	17-4 PH
10	Handle	304 SS
11	Hub	316 SS
12	Sleeve	316 SS
13	Packing Gland	AMPCO 45
14	Thrust Washer	17-4 PH
15	Valve Body	316 SS

Typical spare parts found in Repair Kits

Panel Hole Sizes:

Valve Size	Inches			
	A	B	Screw Size	G
16	2.50	.22	#10-24	1.62

Use suffix **-PM** for extra mounting hardware

Needle Valve Panel Mount

Basic Repair Kits for 316 SS Material:

Stem Type		Basic Repair Kit for 316 SS Material	
		Outside Diameter Tube:	
		30SC 1"	43SC 1"
2 Way Straight, 2 Way Angle 3 Way 2 On-Pressure, 3 Way 1 On-Pressure	VEE	R30SC1607	R43SC1607
	REG	R30SC1608	R43SC1608
2 Way, Replaceable Seat and Stem	VEE	R30SC16872	R43SC16872
	REG	R30SC16882	R43SC16882
3 Way, 2 Stem Manifold	VEE	R30SC16075	R43SC16075
	REG	R30SC16085	R43SC16085

When ordering for valves bought with additional suffix options, please include those exact suffix codes when ordering repair kit. (Example: the stem for a manual valve is manufactured differently for a pneumatically actuated valve and the repair kit must include the exact actuator suffix codes).
Valve Manuals can be found on our website at www.Autoclave.com,
Connection, Running and Seating Torques can be found in the product manual or in our Tools and Installation Catalog Section.

All dimensions for reference only and subject to change • For prompt service, Parker Autoclave stocks select products. Consult factory.

30VM Series: Pressures to 30,000 psi (2068 bar)

Larger Orifice and Higher Cv than 60VM valves

Tube Outside Diameter Size (inches)	Connection Type	Orifice Size Inches (mm)	Rated C _v *	Pressure Rating psi (bar) @Room Temperature**
1/4	F250C	0.094 (2.39)	0.12	30,000 (2068)
3/8	F375C	0.125 (3.18)	0.23	30,000 (2068)
9/16	F562C	0.125 (3.18)	0.33	30,000 (2068)

Notes

* C_v values shown are for 2-way straight valve pattern. For 2-way angle patterns, increase CV value 50%. (Based on water). Formula for converting Cv to volumetric flow can be found in Technical Information section.

** Maximum Allowable Working Pressures decrease as temperatures increase - see pressure/temperature rating guide in Technical Information section.

30VM Series Flow Curve for Vee and Regulating Stem Valves

To ensure proper fit use Parker Autoclave tubing

Valve Packing Options:

Standard Parker Autoclave Engineers valves with PTFE packing may be operated from 0°F (-17.8°C) to 450°F (232°C). High and Cryogenic temperature packing and/or extended stuffing box are available for service from -423°F (-252°C) to 1200°F (650°C) by adding the following suffixes to catalog order number:

- B** Cryogenic trim materials and PTFE packing required when below 0°F (-18°C) to -100°F (-73°C)
- LT** Extended stuffing box valve with PTFE packing and Cryogenic trim materials to -423°F (-252°C)
- TG** Standard valve with PTFE-Glass packing -100°F (-73°C) to 600°F (316°C) (See also -B option above when below 0°F (-18°C))
- GY** Standard valve with Graphite Yarn packing 32°F (0°C) to 800°F (427°C). Used when selecting HT option.
- HT** Extended stuffing box valve with Graphite Yarn packing to 1200°F (650°C)

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Ordering Guide:

For complete information on available stem types, optional connections and additional valve options, see pages 26-27 or contact your Sales Representative. 30VM Series valves are furnished complete with connection components, unless otherwise specified. See High Pressure Fittings and Tubing brochure for compatible products.

Building a Part Number: Example: 30VM4071

Example Part Number:	30VM	4	07	1	XX
Ordering Parameters/Options:	Valve Series	Outside Diameter Tube Size	Stem/Seat Type	Body Pattern	Options
Table Reference: (see below)	A	B	C	D	E

A - Valve Series	
30VM	High Pressure Needle Valve

B - Outside Diameter Tube Size	
4	1/4"
6	3/8"
9	9/16"

C - Stem/Seal Type	
07	Non-Rotating Vee Stem (on-off service)
08	Non-Rotating Regulating Stem (tapered tip for regulating and shutoff)
87	Vee Stem with Replaceable Seat (angle valve only)
88	Regulating Stem with Replaceable Seat (angle valve only)

D - Body Pattern	
1	Two-Way Straight
2	Two-Way Angle
3	Three-Way, Two on Pressure
4	Three-Way, One on Pressure
5	Three-Way, Two Stem Manifold Valve

E - Options	
K	Antivibration Gland (replaces standard gland)
B	All 316 SS Materials required when below 0°F (-18°C) (included in LT)
LT	Low Temperature Extension (to -423°F) (includes PTFE packing)
TG	PTFE Glass (25%) Packing (to 600°F)
GY	Graphite Yarn Packing (to 800°F)
HT	High Temperature Extension (to 1200°F) (includes GY packing)
SOG	NACE MR0175 Material, Hardness Verification/Certificate
HYG	Hydrogen/Helium Upgrade/Seat Testing

Notes: Valve Manuals can be found on our website at www.Autoclave.com. Connection, Running and Seating Torques can be found in the product manual or in our Tools and Installation Catalog Section. Valves that have not been cycled for a substantial period of time may require higher initial actuation torque.

*Replaceable seat option is sold with two (2) seat surfaces 180° apart.

Pneumatic Actuator Options - see Actuator brochure for Suffix Codes
Other materials available upon request. See Technical Brochure for list of common options.
See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.

Material of Construction:

Item #	Description	Material
1	Hex Nut	300 Series SS
2	Thrust Washer	17-4 PH
3	Stem Sleeve	316 SS
4	Vee Stem, (3/8" 30VM shown)	316 SS
5	Packing Washer	AMPCO 45
6	Packing	PTFE
7	Bottom Washer	316 SS
8	Handle	316 SS
9	Packing Gland	AMPCO 45
10	Locking Device	302SS
11	Screw #10	18-8 SS
12	Valve Body	316 SS
13	Replaceable Seat	17-4PH
14	Seat Retainer	316 SS

Typical spare parts found in Repair Kits

Panel Hole Sizes:

Valve Size	Inches			
	A	B	Screw Size	G
4 and 6	1.38	.22	#10-24	1.00
9	1.38	.22	#10-24	1.00

Use suffix **-PM** for extra mounting hardware

Needle Valve Panel Mount

Basic Repair Kits for 316 SS Material:

Stem Type		Basic Repair Kit for 316 SS Material	
		Outside Diameter Tube:	
		1/4", 3/8", 9/16"	
2 Way Straight, 2 Way Angle 3 Way 2 On-Pressure, 3 Way 1 On-Pressure	VEE	R30VM7	
	REG	R30VM8	
2 Way, Replaceable Seat and Stem	VEE	R30VM872	
	REG	R30VM882	
3 Way, 2 Stem Manifold	VEE	R30VM075	
	REG	R30VM085	

When ordering for valves bought with additional suffix options, please include those exact suffix codes when ordering repair kit. (Example: the stem for a manual valve is manufactured differently for a pneumatically actuated valve and the repair kit must include the exact actuator suffix codes).
Valve Manuals can be found on our website at www.Autoclave.com,
Connection, Running and Seating Torques can be found in the product manual or in our Tools and Installation Catalog Section.

40VM Series: Pressures to 40,000 psi (2760 bar)

For use with 9/16" High Pressure Tubing w/ .250" ID

Tube Outside Diameter Size (inches)	Connection Type	Orifice Size Inches (mm)	Rated C_v^*	Pressure Rating psi (bar) @Room Temperature**
9/16	F562C40	0.109 (2.77)	0.28	40,000 (2760)

Notes

* C_v values shown are for 2-way straight valve pattern. For 2-way angle patterns, increase CV value 50%. (Based on water). Formula for converting C_v to volumetric flow can be found in Technical Information section.

** Maximum Allowable Working Pressures decrease as temperatures increase - see pressure/temperature rating guide in Technical Information section.

40VM Series Flow Curve for Vee and Regulating Stem Valves

To ensure proper fit use Parker Autoclave tubing

Valve Packing Options:

Standard Parker Autoclave Engineers valves with nylon/leather/nylon packing may be operated from 40°F (4.4°C) to 230°F (110°C). Extended temperature packing is available for service from -423°F (-252°C) to 1200°F (650°C) by adding the following suffixes to catalog order number:

- B** Cryogenic trim materials and PTFE packing required when below 0°F (-18°C) to -100°F (-73°C)
- LT** Extended stuffing box valve with PTFE packing and Cryogenic trim materials to -423°F (-252°C)
- *TG** Standard valve with PTFE-Glass packing -100°F (-73°C) to 600°F (316°C) (See also -B option above when below 0°F (-18°C))
- GY** Standard valve with Graphite Yarn packing 32°F (0°C) to 800°F (427°C). Used when selecting HT option.
- HT** Extended stuffing box valve with Graphite Yarn packing to 1200°F (650°C)

Note: *40VM and 60VM TG packing options supplied with PEEK/PTFE Glass/PEEK

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Ordering Guide:

For complete information on available stem types, optional connections and additional valve options, see pages 26-27 or contact your Sales Representative. 40VM Series valves are furnished complete with connection components, unless otherwise specified. See High Pressure Fittings and Tubing brochure for compatible products.

Building a Part Number: Example: 40VM9071

Example Part Number:	40VM	9	07	1	XX
Ordering Parameters/Options:	Valve Series	Outside Diameter Tube Size	Stem/Seat Type	Body Pattern	Options
Table Reference: (see below)	A	B	C	D	E

A - Valve Series	
40VM	High Pressure Needle Valve

B - Outside Diameter Tube Size	
9	9/16"

C - Stem/Seat Type	
07	Non-Rotating Vee Stem (on-off service)
08	Non-Rotating Regulating Stem (tapered tip for regulating and shutoff)
87	Vee Stem with Replaceable Seat (angle valve only)
88	Regulating Stem with Replaceable Seat (angle valve only)

D - Body Pattern	
1	Two-Way Straight
2	Two-Way Angle (required with replaceable seat option)
3	Three-Way, Two on Pressure
4	Three-Way, One on Pressure
5	Three-Way, Two Stem Manifold Valve

E - Options	
K	Antivibration Gland (replaces standard gland)
B	All 316 SS Materials required when below 0°F (-18°C) (included in LT)
LT	Low Temperature Extension (to -423°F) (includes PTFE packing)
TG	PTFE Glass (25%) Packing (to 600°F)
GY	Graphite Yarn Packing (to 800°F)
HT	High Temperature Extension (to 1200°F) (includes GY packing)

Notes: Valve Manuals can be found on our website at www.Autoclave.com. Connection, Running and Seating Torques can be found in the product manual or in our Tools and Installation Catalog Section. Valves that have not been cycled for a substantial period of time may require higher initial actuation torque.

*Replaceable seat option is sold with two (2) seat surfaces 180° apart.

Actuator Options - see Actuator brochure for Suffix Codes
Other materials available upon request. See Technical Brochure for list of common options.
See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.

Material of Construction:

Item #	Description	Material
1	Hex Nut	300 Series SS
2	Thrust Washer	17-4 PH
3	Stem Sleeve	304 SS
4	Vee Stem, (9/16" 40VM shown)	316 SS
5	Thrust Washer	17-4 PH
6	Backup Washer	17-4 PH
7	Packing	Nylon
8	Packing Washer	17-4 PH
9	Handle, 3"	Aluminum
10	Packing Gland	AMPCO 45
11	Locking Device	302 SS
12	Screw, #10	18-8 SS
13	Packing	Leather
14	Replaceable Seat	17-4 PH
15	Valve Body	316 SS
16	Seat Retainer	316 SS

Typical spare parts found in Repair Kits

Panel Hole Sizes:

Valve Size	Inches			
	A	B	Screw Size	G
4 and 6	1.38	.22	#10-24	1.00
9	1.38	.22	#10-24	1.00

Use suffix **-PM** for extra mounting hardware

60VM Series: Pressures to 60,000 psi (4137 bar) Temperatures from -423°F to 1200°F (-253°C to 650°C)

Tube Outside Diameter Size (inches)	Connection Type	Orifice Size Inches (mm)	Rated C _v *	Pressure Rating psi (bar) @Room Temperature**
1/4	F250C	0.062 (1.57)	0.08	60,000 (4137)
3/8	F375C	0.062 (1.57)	0.09	60,000 (4137)
9/16	F562C	0.0789 (1.98)	0.14	60,000 (4137)

Notes

* C_v values shown are for 2-way straight valve pattern. For 2-way angle patterns, increase CV value 50%. (Based on water). Formula for converting C_v to volumetric flow can be found in Technical Information section.

** Maximum Allowable Working Pressures decrease as temperatures increase - see pressure/temperature rating guide in Technical Information section.

60VM Series Flow Curve for Vee and Regulating Stem Valves

To ensure proper fit use Parker Autoclave tubing

Valve Packing Options:

Standard Parker Autoclave Engineers valves with nylon/leather/nylon packing may be operated from 40°F (4.4°C) to 230°F (110°C). Extended temperature packing is available for service from -423°F (-252°C) to 1200°F (650°C) by adding the following suffixes to catalog order number:

- B** Cryogenic trim materials and PTFE packing required when below 0°F (-18°C) to -100°F (-73°C)
- LT** Extended stuffing box valve with PTFE packing and Cryogenic trim materials to -423°F (-252°C)
- *TG** Standard valve with PTFE-Glass packing -100°F (-73°C) to 600°F (316°C) (See also -B option above when below 0°F (-18°C))
- GY** Standard valve with Graphite Yarn packing 32°F (0°C) to 800°F (427°C). Used when selecting HT option.
- HT** Extended stuffing box valve with Graphite Yarn packing to 1200°F (650°C)

Note: 40VM and *60VM TG packing options supplied with PEEK/PTFE Glass/PEEK

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Ordering Guide:

For complete information on available stem types, optional connections and additional valve options, see pages 26-27 or contact your Sales Representative. 60VM Series valves are furnished complete with connection components, unless otherwise specified. See High Pressure Fittings and Tubing brochure for compatible products.

Building a Part Number: Example: 60VM4071

Example Part Number:	60VM	4	07	1	XX
Ordering Parameters/Options:	Valve Series	Outside Diameter Tube Size	Stem/Seat Type	Body Pattern	Options
Table Reference: (see below)	A	B	C	D	E

A - Valve Series

60VM	High Pressure Needle Valve
------	----------------------------

B - Outside Diameter Tube Size

4	1/4"
6	3/8"
9	9/16"

C - Stem/Seat Type

07	Non-Rotating Vee Stem (on-off service)
08	Non-Rotating Regulating Stem (tapered tip for regulating and shutoff)
87	Vee Stem with Replaceable Seat (angle valve only)
88	Regulating Stem with Replaceable Seat (angle valve only)

Notes: VValve Manuals can be found on our website at www.Autoclave.com. Connection, Running and Seating Torques can be found in the product manual or in our Tools and Installation Catalog Section. Valves that have not been cycled for a substantial period of time may require higher initial actuation torque.

*Replaceable seat option is sold with two (2) seat surfaces 180° apart.

D - Body Pattern

1	Two-Way Straight
2	Two-Way Angle
3	Three-Way, Two on Pressure
4	Three-Way, One on Pressure
5	Three-Way, Two Stem Manifold Valve

E - Options

K	Antivibration Gland (replaces standard gland)
B	All 316 SS Materials required when below 0°F (-18°C) (included in LT)
LT	Low Temperature Extension (to -423°F) (includes PTFE packing)
TG	PTFE Glass (25%) Packing (to 600°F)
GY	Graphite Yarn Packing (to 800°F)
HT	High Temperature Extension (to 1200°F) (includes GY packing)
SOG	NACE MR0175 Material, Hardness Verification/Certificate
HYG	Hydrogen/Helium Upgrade/Seat Testing

Actuator Options - see individual brochures for Suffix Codes

Other materials available upon request. See Technical Brochure for list of common options. See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.

100VM & 150V Series: Pressures to 150,000 psi (10350 bar)

Tube Outside Diameter Size (inches)	Connection Type	Orifice Size Inches (mm)	Rated C _v *	Pressure Rating psi (bar) @Room Temperature**
1/4 (100VM)	F312C150	0.062 (1.57)	0.09	100,000 (10350)
5/16 (100VM)	F312C150	0.062 (1.57)	0.09	100,000 (10350)
3/8 (100VM)	F312C150	0.062 (1.57)	0.09	100,000 (10350)
9/16 (100VM)	F562C	0.188 (4.75)	0.65	100,000 (10350)
5/16 (150V)	F312C150	0.062 (1.57)	0.06	150,000 (10342)

Notes

* C_v values shown are for 2-way straight valve pattern. For 2-way angle patterns, increase C_v value 50%. (Based on water)

** For complete temperature ratings see pressure/temperature rating guide in Technical Information section.

100VM and 150V Series Flow Curve for Vee Stem Valves

100VM Series

Note: 100VM9 Series comes with a T-Handle. To ensure proper fit use Parker Autoclave tubing

Valve Packing Options:

Standard Parker Autoclave Engineers valves with nylon/leather/nylon packing may be operated from 40°F (4.4°C) to 230°F (110°C).

Note: Stem must be actuated with 15/16" hex size torque wrench (offered in Tools and Installation Catalog)

Shut-off torque = 32 ft-lbf (force in excess could damage stem)
Running torque = 26 ft-lbf

150V Series

To ensure proper fit use Parker Autoclave tubing

Ordering Guide:

For complete information on available stem types, optional connections and additional valve options, see pages 26-27 or contact your Sales Representative. 100VM Series valves are furnished complete with connection components, unless otherwise specified.

Building a Part Number: Example: 100VM4071

Example Part Number:	100VM	4	07	1	XX
Ordering Parameters/Options:	Valve Series	Outside Diameter Tube Size	Stem/Seat Type	Body Pattern	Options
Table Reference: (see below)	A	B	C	D	E

A - Valve Series

100VM	High Pressure Needle Valve
150V	High Pressure Needle Valve (5/16" 150Ksi tubing only)

D - Body Pattern

1	Two-Way Straight
2	Two-Way Angle (Required for 150V valves)

B - Outside Diameter Tube Size

4	1/4"
5	5/16"
6	3/8"
9	9/16" (this size requires -155 material option)

E - Options

Pneumatic Actuator Options - see Actuator brochure for Suffix Codes	
-155	15-5 PH material (mandatory for size 9 valve)

Notes: Valve Manuals can be found on our website at www.Autoclave.com. Connection, Running and Seating Torques can be found in the product manual or in our Tools and Installation Catalog Section. Valves that have not been cycled for a substantial period of time may require higher initial actuation torque.

C - Stem/Seat Type

07	Non-Rotating Vee Stem (on-off service)
87	Vee Stem with Replaceable Seat (angle valve only)

Material of Construction (100VM):

Item #	Description	Material
1	Hex Nut, #10-32	316 SS
2	Thrust Washer	17-4 PH
3	Stem Sleeve	304 SS
4	Vee Stem, (3/8" 100VM shown)	MP35N
5	Packing Gland	AMPCO 45
6	Thrust Washer	17-4 PH
7	Backup Washer	15-5 PH
8	Packing Washer	Berylco
9	Packing	Nylon
10	Packing	Leather
11	Handle	316 SS
12	Screw, #10	18-8 SS
13	Locking Device	302 SS
14	Packing	Nylon
15	Packing Washer	Berylco
16	Body, (3/8" 100VM shown)	316 SS
•	Replaceable Seat	17-4 PH
•	Seat Retainer	316 SS

Typical spare parts found in Repair Kits

Panel Hole Sizes:

Valve Size	Inches			
	A	B	Screw Size	G
4 and 6	2.25	.22	#10-24	1.12
9	1.75	.22	#10-24	1.12

Use suffix **-PM** for extra mounting hardware

Needle Valve Panel Mount

Material of Construction (150V):

Item #	Description	Material
1	Hex Nut, 7/16-14	300 Series SS
2	Stem Retainer	316 SS
3	Stem Sleeve	AMPCO 45
4	Packing Gland	MP35N
5	Dowel Pin, 5/16"	Steel
6	Stem	Tool Steel
7	Packing Washer	E52100 Steel
8	Collar	316 SS
9	Seat Nut	630 SS
10	Gland	316 SS
11	Hex Nut, 7/16 - 14	300 Series SS
12	Stop Segment	Carbon Steel
13	Screw, #10	300 Series SS
14	Locking Device	302 SS
15	Spacer	304 SS
16	Bottom Washer	Tool Steel
17	Seat	NI Maraging Steel
18	Body, (5/16" 150VM shown)	4340
19	Wedge Ring	Berylco
20	Packing	PTFE
21	Packing	Leather
22	Wedge Ring	Berylco

Typical spare parts found in Repair Kits

Note:

150V Shutoff torque = 32 ft-lbf (Force in excess could damage stem)

150V Running torque = 26 ft-lbf

Basic Repair Kits for 316 SS Material:

Stem Type		Basic Repair Kit for 316 SS Material		
		Valve Type		
		100VM4 to 6	100VM9	150V
2 Way Straight, 2 Way Angle 3 Way 2 On-Pressure, 3 Way 1 On-Pressure (All sizes)	VEE	R100VM407 R100VM507 R100VM607	R100VM907	N/A
2 Way, Replaceable Seat and Stem	VEE	R100VM872	R100VM9872	R150V5072

When ordering for valves bought with additional suffix options, please include those exact suffix codes when ordering repair kit. (Example: the stem for a manual valve is manufactured differently for a pneumatically actuated valve and the repair kit must include the exact actuator suffix codes).
Valve Manuals can be found on our website at www.Autoclave.com,
Connection, Running and Seating Torques can be found in the product manual or in our Tools and Installation Catalog Section.

100VM & 150V Series Dimensions:

2-Way Straight		Catalog Number			
Stem Type	VEE	100VM

G - Packing Gland mounting hole drill size • G1 - Bracket mounting hole size • H* - Dimension is with stem in closed position
 All dimensions for reference only and subject to change • For prompt service, Parker Autoclave stocks select products. Consult factory.

Valve Options: (For Actuator Options please reference specific Actuator brochure)

Pneumatic Valve Actuators:

The need to control process and vent valves from a remote location makes air operated valves a vital component to many processing operations. All Parker Autoclave Engineers' valves are available with piston type actuators. Five sizes of air actuators (light, mini-light, medium, heavy duty or extra heavy, single and double stage) are offered to meet the service requirements of Parker Autoclave Engineers' Low, Medium and High Pressure needle valves. Both air-to-open (normally closed) and air-to-close (normally open) designs are included in the product line. Optional air to open AND close actuators available upon request. Please see our Pneumatic Valve Actuator Brochure to help size the proper actuator for your application.

Electric Valve Actuators:

Remotely controlling process flow at high pressure enhances safety and lowers labor costs. Parker Autoclave Engineers developed a flow control valve available in several models including weatherproof and explosionproof options.

The Electrically Actuated Shut-off/Flow Regulating Actuator (FRC Series) is available for most of our Needle Valves through 9/16" tubing size and up to 60,000 psi maximum pressure. Explosion proof version is rated for hydrogen service and can withstand wide process temperature ranges.

Stem Options:

Most Parker Autoclave Engineers' valves are available with either Vee (on-off) or Regulating (Flow Control) Stems in our standard valve body seat or with our optional replaceable seat as shown below:

VEE Stem

The Vee stem is used for direct on-off, metal-to-metal shut-off with quick-opening flow characteristics.

Regulating Stem

In some applications, more precise flow control is required than is possible with a Vee stem. For these cases, Autoclave offers a non-rotating, two-piece regulating stem which can be used for both control and shut-off. While it is not as precise as the control associated with the MicroMetering stem, especially with smaller flows, it does offer substantially better control than the Vee stem.

Replaceable Seat (with Vee Stem)

Replaceable seat option is only available with Right-Angle Style body. Replaceable seat is supplied as standard with an additional seat - rotate to use second side. Can be used with either stem type. Options include Stellite material or N-Dura coating to increase service life.

Valve Options: (For Actuator Options please reference specific Actuator brochure)

High/Low Temperature Extension:

Required with extreme temperatures to remove packing from contact with flow stream.

- HT High Temperature (over 800°F (427°C))
- LT Low Temperature (under -100°F (-73°C))

Valve Series	Outside Diameter Tube Size (inches)	Dimensions "A" inches (mm)
30SC 30VM 40VM 43SC 60VM	1/4"	6.00 (152)
	3/8"	6.00 (152)
	9/16"	6.00 (152)
	1"	9.42 (239)

HT option code includes Graphite (-GY) packing
LT option code includes 316 SS Trim material and PTFE packing

ES Stem Extender:

Stem extenders are offered for High and Low temperature operation or to extend through panel or barricade.

To order valve with Stem Extender, add "ES-" and length (6", 12", 18", 24") to beginning of valve part number e.g. ES12-60VM6071. Other lengths to special order.

To order Stem Extender only, provide valve model prefix e.g. ES12-60VM6. Handle not included – use same provided with original valve.

Needle Valve Clam Shell Handle Lockout:

(order separately using part numbers shown below, padlock not included)

Clam Shell Handle locks are provided to lockout valves in open or closed position preventing unauthorized personnel from actuating valve during shutdown or emergency situations. This clamshell design is available in four (4) sizes dependent on handle length:

- P/N AE004855 – 1" to 2.5" handle length
- P/N 90088 – 2.5" to 5.0" handle length
- P/N 90194 – 6.5" to 10" handle length
- P/N AE004350 – 8" to 13" handle length

Needle Valve

NPT (Pipe Style) Threaded Connection 15,000 psi (1034 bar)

10P and 15P Series

Principle of Operation:

P Series (Pipe Style) Needle Valves are made available for those customers that prefer using pipe instead of high pressure instrumentation tubing for pressures up to 15,000 psi MAWP. Designed using high tensile strength cold worked 316 Stainless Steel material and “ANPT” (Aerospace version - compatible with all ANSI B1.20.1 NPT connections) thread form. Use only with similar valves, fittings and pipe capable of same or lower pressures.

Pipe Valve Features:

- P Series valve design provides in-line pipe connections for 1/4" to 1" pipe sizes.
- UNS S31600 cold worked 316 Stainless Steel material as standard. See Technical brochure for additional material options.
- Non-rotating stem prevents stem/seat galling
- Metal-to-metal seating achieves bubble-tight shut-off, longer stem/seat life in abrasive flow, greater durability for repeated on/off cycles and excellent corrosion resistance. These valves can be used in liquid or gas applications.
- PTFE packing below stem threads provide dependable stem and body sealing. Optional packing materials available.
- Choice of Vee or Flow Regulating stem tips. N-Dura Coating or Stellite® material option for severe service
- Operating temperature range from -423° to 400°F (-252° to 204°C) (Limit of PTFE sealant tape)

Parker Autoclave Engineers valves are complemented by a complete line of fittings, needle and ball valves, relief and check valves.

Note:

NPT Pipe Thread Connections:

NPT threads must be sealed using a high quality PTFE tape (3 wraps minimum) and/or thread sealant paste product suitable for process temperatures. Refer to thread sealant manufacturer’s instructions for application instructions. A good thread lubrication product (metal flake style) capable of process temperatures is also necessary to prevent thread galling.

Sealing performance may vary based on many factors such as pressure, temperature, media, thread quality, thread material, proper engagement, and proper use of thread sealant.

End user should limit the number of times an NPT fitting is assembled and disassembled as thread deformation during assembly will result in deteriorating seal quality over time.

All Parker Autoclave Engineers products are designed in accordance with ASME B31.3 Chapter IX High Pressure Piping standards.

ENGINEERING YOUR SUCCESS.

P Series Needle Valve: Pressures to 15,000 psi (1034 bar)

Tube Outside Diameter Size (inches)	Connection Type	Orifice Size Inches (mm)	Rated C_v^*	Pressure Rating psi (bar) @Room Temperature**
1/4	NPT	0.203 (5.16)	0.63	15,000 (1034)
3/8	NPT	0.219 (5.56)	0.75	15,000 (1034)
1/2	NPT	0.312 (7.92)	1.30	15,000 (1034)
3/4	NPT	0.438 (11.13)	2.50	10,000 (689)
1	NPT	0.562 (14.27)	4.40	10,000 (689)

Notes

* C_v values shown are for 2-way straight valve pattern. For 2-way angle patterns, increase CV value 50%. (Based on water). Formula for converting C_v to volumetric flow can be found in Technical Information section.

** Maximum Allowable Working Pressures decrease as temperatures increase - see pressure/temperature rating guide in Technical Information section.

P Series Flow Curves for Vee and Regulating Style Stems

Valve Packing Options:

Standard Parker Autoclave Engineers valves with PTFE packing may be operated from 0°F (-18°C) to 450°F (232°C). High and Cryogenic temperature packing and /or extended stuffing box are available for service from -423°F (-252°C) to 800°F (427°C) by adding the following suffixes to catalog order number:

- B** Cryogenic trim materials and PTFE packing required when below 0°F (-18°C) to -100°F (-73°C)
- LT** Extended stuffing box valve with PTFE packing and Cryogenic trim materials to -423°F (-252°C)
- TG** Standard valve with PTFE-Glass packing -100°F (-73°C) to 600°F (316°C) (See also -B option above when below 0°F (-18°C))
- GY** Standard valve with Graphite Braided Yarn packing 32°F (0°C) to 800°F (427°C).

† Parker Autoclave Engineers recommends pipe connections be operated between -423°F (-252°C) and 400°F (204°C) (Temperature limit of PTFE sealant tape). For additional valve options, contact your Sales Representative.

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Ordering Guide:

For complete information on available stem types, optional connections and additional valve options, see Needle Valve Options section or contact your Sales Representative.

Building a Part Number: Example: 15P4071

Example Part Number:	15P	4	07	1	XX
Ordering Parameters/Options:	Valve Series	Outside Diameter Tube Size	Stem/Seat Type	Body Pattern	Options
Table Reference: (see below)	A	B	C	D	E

A - Valve Series

10P	10,000 psi P Series (Pipe Valve) Needle Valve (use with 3/4" and 1")
15P	15,000 psi P Series (Pipe Valve) Needle Valve

B - Pipe Connection Size

4	1/4" Female NPT
6	3/8" Female NPT
8	1/2" Female NPT
12	3/4" Female NPT
16	1" Female NPT

C - Stem/Seal Type (see page 8 for optional stem type description)

07	Non-Rotating Vee Stem (on-off service)
08	Non-Rotating Regulating Stem (tapered tip for regulating and shutoff)

Notes: Valve Manuals can be found on our website at www.Autoclave.com. Connection, Running and Seating Torques can be found in the product manual or in our Tools and Installation Catalog Section. Valves that have not been cycled for a substantial period of time may require higher initial actuation torque.

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

D - Body Pattern

1	Two-Way Straight
2	Two-Way Angle
3	Three-Way, Two on Pressure
4	Three-Way, One on Pressure
5	Three-Way, Two Stem Manifold Valve

E - Options (select as many as necessary)

For additional valve options see pages 8 & 9	
PM	Panel Mount, additional screw is supplied
B	Low temperature service below 0°F (-18°C) (included in LT code)
LT	Extended packing option with PTFE packing & cryogenic materials
TG	PTFE Glass (25%) Packing (to 600°F)
GY	High Temperature Graphite Yarn Packing to 800°F
*SOG	NACE Material, Hardness Verification/Certificate
***2507	UNS 32750 2507 Super Duplex Wetted Materials
***IN625	UNS N06625 Inconel 625 Wetted Materials

Pneumatic and Electric Actuator Options - see individual brochures for Suffix Codes
Other materials available on request See Technical Brochure for common options and MAWP ratings

Notes: 316 SS valve bodies are cold worked and not suitable for use in NACE (ISO 15156) applications. If required, contact factory for options.

* SOG suffix also changes CW 316 SS Body material to Annealed 316 SS suitable for NACE service, Pressure reduction to 10,000 psi is typical.

*** Special Materials often have reduced MAWP ratings, see Technical brochure for assistance and for additional material options

Basic Repair Kits for 316 SS Material:

Basic Repair Kit for 316 SS Material

Stem Type		Pipe Size:				
		1/4"	3/8"	1/2"	3/4"	1"

Valve Options:

(For Actuator Options please reference specific Actuator brochure)

Pneumatic Valve Actuators:

The need to control process and vent valves from a remote location makes air operated valves a vital component to many processing operations. All Parker Autoclave Engineers' valves are available with piston type actuators. Five sizes of air actuators (light, mini-light, medium, heavy duty or extra heavy, single and double stage) are offered to meet the service requirements of Parker Autoclave Engineers' Low, Medium and High Pressure needle valves. Both air-to-open (normally closed) and air-to-close (normally open) designs are included in the product line. Optional air to open AND close actuators available upon request. Please see our Pneumatic Valve Actuator Brochure to help size the proper actuator for your application.

Electric Valve Actuators:

Remotely controlling process flow at high pressure enhances safety and lowers labor costs. Parker Autoclave Engineers developed a flow control valve available in several models including weatherproof and explosionproof options.

The Electrically Actuated Shut-off/Flow Regulating Actuator (FRC Series) is available for most of our Needle Valves through 1/2" pipe connection sizes and up to 15,000 psi maximum pressure. They can withstand wide process temperature ranges.

Stem Options:

Most Parker Autoclave Engineers' valves are available with either Vee (on-off) or Regulating (Flow Control) Stems in our standard valve body as shown below. For severe service stem (and replaceable seat if ordered) can be offered with N-Dura Diamond-Like coating (-CS suffix or -CSS (coated stem & seat)) or made from Stellite (-SS or -SSRS (Stellite stem, replaceable seat)).

VEE Stem

The Vee stem is used for direct on-off, metal-to-metal shut-off with quick-opening flow characteristics.

Regulating Stem

In some applications, more precise flow control is required than is possible with a Vee stem. For these cases, Autoclave offers a non-rotating, two-piece regulating stem which can be used for both control and shut-off. While it is not as precise as the control associated with the MicroMetering stem, especially with smaller flows, it does offer substantially better control than the Vee stem.

Valve Options: (For Actuator Options please reference specific Actuator brochure)

High/Low Temperature Extension:

Required with extreme temperatures to remove packing from contact with flow stream.

-LT Low Temperature (under -100°F (-73°C))

Valve Series	Outside Diameter Tube Size (inches)	Dimensions "A" inches (mm)
10P Series 15P Series	1/4"	5.50 (140)
	3/8"	6.00 (152)
	1/2"	6.60 (168)
	3/4"	7.75 (197)
	1"	9.30 (236)

LT option code includes 316 SS Trim material and PTFE packing

ES Stem Extender:

Stem extenders are offered for High and Low temperature operation or to extend through panel or barricade.

To order valve with Stem Extender, add **"ES-"** and length (6", 12", 18", 24") to beginning of valve part number e.g. ES12-15P6071. Other lengths to special order.

To order Stem Extender only, provide valve model prefix e.g. ES12-15P6. Handle not included – use same provided with original valve.

Needle Valve Clam Shell Handle Lockout:

(order separately using part numbers shown below, padlock not included)

Clam Shell Handle locks are provided to lockout valves in open or closed position preventing unauthorized personnel from actuating valve during shutdown or emergency situations. This clamshell design is available in four (4) sizes dependent on handle length:

- P/N AE004855 – 1" to 2.5" handle length
- P/N 90088 – 2.5" to 5.0" handle length
- P/N 90194 – 6.5" to 10" handle length
- P/N AE004350 – 8" to 13" handle length

Needle Valve

VRMM MicroMetering Series 60,000 psi (4140 bar)

10VRMM, 15PVRMM (NPT), 30VRMM, 60VRMM Series

Principle of Operation:

MicroMetering valves are designed for applications where more precise control of small flow is required than is possible with a standard regulating stem. Barrel and Thimble micrometer design permits settings to be repeated.

Metering is controlled by a finely tapered stem acting in a precisely mated replaceable seat. Very fine stem position is achieved utilizing a 40 TPI thread. The Barrel and Thimble are calibrated for proper metering at the factory.

These valves are designed for metering only and cannot be used as a shutoff valve. Minimum flow is factory set and occurs at “0” position. **DO NOT OPERATE THE VALVE BELOW THE ZERO POSITION OR DAMAGE WILL RESULT.** When shutoff action is required, a pressure matching shutoff valve is recommended.

MicroMetering Valve Features:

- Barrel and Thimble design permits repeatable settings
- Barrel divisions every 0.025"
- 25 Thimble divisions, each representing 0.001" stem travel. One revolution = 0.025" stem travel.
- Operating Temperatures vary per model but can range from -100° to 800°F (-73° to 427°C)
- UNS S31600 cold worked type 316 stainless steel body. Stem and seat are cold-worked type 316 stainless steel.
- Packing below stem threads is PTFE for the 10VRMM, 15PVRMM and 30VRMM valves and nylon-leather for the 60VRMM. For packing options, see Technical Information Section.
- Speedbite “W” Series compression sleeve connections are used on the 10VRMM Series. Operating temperatures are limited from -100° to 650°F
- 1/4" NPT connections (ANPT Aerospace version) are used on 15PVRMM Series. Operating temperatures are limited from -100°F to 400°F
- Parker AE High Pressure Cone & Thread connections are used on both the 30VRMM and 60VRMM Series
- Electric Flow Control Actuators are available for all VRMM Style Valves. See Actuator Section of Catalog for suffix code options.

Parker Autoclave Engineers valves are complemented by a complete line of fittings, tubing, check valves and line filters. Traceability is ensured by use of heat a purchase order codes etched on valve body that also include model number, MAWP rating, and Material Type references. All valves include connection sleeve/collar and gland nut as appropriate.

All Parker Autoclave Engineers products are designed in accordance with ASME B31.3 Chapter IX High Pressure Piping standards.

ENGINEERING YOUR SUCCESS.

MicroMetering Series: Pressures to 60,000 psi (4137bar)

15PVRMM "NPT" version shown above

Valve Series	Tube Outside Diameter Size (inches)	Connection Type	Orifice Size Inches (mm)	Rated C_v^*	Pressure Rating psi (bar) @Room Temperature**
10VRMM	1/8	W125	0.62 (1.57)	.004	15,000 (1034)
15PVRMM	1/4	NPT	0.62 (1.57)	.004	15,000 (1034)
30VRMM	1/4	F250C	0.62 (1.57)	.004	30,000 (2069)
60VRMM	1/4	F250C	0.62 (1.57)	.004	60,000 (4137)
60VRMM	3/8	F375C	0.62 (1.57)	.004	60,000 (4137)

Notes

** For complete temperature ratings see pressure/temperature rating guide in Technical Information section.

MicroMetering (VRMM) Series Flow Curve

To ensure proper fit use Parker Autoclave tubing
NPT valve option will not have connection collar and gland nut as shown above.

Valve Packing Options:

Standard Parker Autoclave Engineers 10VRMM, 15PVRMM and 30VRMM Series valves with PTFE packing may be operated to 450°F (232°C). 60VRMM series valves with nylon/leather/nylon packing may be operated from 40°F (4°C) to 230°F (110°C).

***TG** Standard valve with PTFE glass packing -100° to 600°F (-73° to 316°).

GY Standard valve with graphite braided yarn packing to 32° to 800°F (0° to 427°).

B Cryogenic trim materials and PTFE packing required when below 0°F (-18°C) to -100°F (-73°C).

Note: *60VRMM valves with -TG option supplied with PEEK/PTFE Glass/PEEK packing

Parker Autoclave Engineers does not recommend Low Pressure Speedbite sleeve connections below -100°F (-73°C) or above 650°F (343°C). NPT Pipe Connections can be used from -100° to over 400°F (-72 to 204°C) (dependent on sealant temperature range). See needle valve options for stem and seat coating for erosive service.

Ordering Guide:

For complete information on available stem types, optional connections and additional valve options, see Needle Valve Options section or contact your Sales Representative. VRMM Series valves are furnished complete with connection components, unless otherwise specified.

Notes

NPT Pipe Thread Connections:

NPT threads must be sealed using a high quality PTFE tape (3 wraps minimum) and/or thread sealant paste product suitable for process temperature.

Refer to thread sealant manufacturer's instructions for application instructions. A good thread lubrication product (metal flake style) capable of process temperatures is also necessary to prevent thread galling.

Sealing performance may vary based on many factors such as pressure, temperature, media, thread quality, thread material, proper engagement, and proper use of thread sealant.

End user should limit the number of times an NPT fitting is assembled and disassembled as thread deformation during assembly will result in deteriorating seal quality over time.

Panel Hole Sizes:

Valve Size	Inches			
	A	B	Screw Size	G
10VRMM	.63 *	.22	#10-24	0.75
15PVRMM	1.38	.22	#10-24	1.0
30VRMM	1.38	.22	#10-24	1.0
60VRMM (both sizes)	1.38	.22	#10-24	1.0

*10VRMM Valve has only one mounting screw. Dimension shown is from stem center to panel hole center.
10VRMM Thimble must be removed to mount on panel.

Needle Valve Panel Mount

Valve Options: (For Actuator Options please reference specific Actuator brochure)

Electric Valve Actuators:

Parker Autoclave Engineers has developed an electric actuator capable of fine, multi-turn, control.

This actuator is designed specifically for our VRMM Series valves to facilitate remote control of these high pressure low flow metering valves. 4-20mA (-C4 suffix) or 0-10VDC (-C10 suffix) control signal options are available.

High Temperature Extension:

Required for extreme temperatures

-HT High Temperature (over 600°F to 800°F maximum)

Valve Series	Outside Diameter Tube Size (inches)	Dimensions "A" inches (mm)
10VRMM	1/8"	5.38 (137)
15PVRMM	1/4"	6.00 (152)
30VRMM	3/8"	6.00 (152)
60VRMM	3/8"	6.00 (152)

HT option code includes Graphite (-GY) packing

Needle Valve Clam Shell Handle Lockout:

(order separately using part numbers shown below, padlock not included)

Clam Shell Handle locks are provided to lockout valves in open or closed position preventing unauthorized personnel from actuating valve during shutdown or emergency situations. This clamshell design is available in four (4) sizes dependent on handle length:

- P/N AE004855 – 1" to 2.5" handle length
- P/N 90088 – 2.5" to 5.0" handle length
- P/N 90194 – 6.5" to 10" handle length
- P/N AE004350 – 8" to 13" handle length

Needle Valve

Manifold Block and Bleed

MVBB, 20DBNV, Wellhead Gauge & Bleed/Vent Valves

Pressure to 30,000 psi (2070 bar)

Principle of Operation:

Parker Autoclave Engineers Manifold Valves are available in compact Single and Double Block & Bleed manifold designs using Cone & Thread style and NPT connections. Designed for a maximum of 30,000 psi MAWP using high tensile strength UNS S31600 cold worked 316 Stainless Steel material as standard.

MVBB Single Block & Bleed Manifold Valve Features:

- MVBB Series valve design provides large valve performance in a small package
- Tubing sizes: 1/4" and 3/8" Pipe Size: 1/2" NPT
- Single Block & Bleed design

DBNV Double Block & Bleed Manifold Valve Features:

- Connection specific Non-Rotating Vee Stems matching material selection, (Rotating Stem Vent valve)
- Tubing Sizes from 1/4" to 3/4" Medium Pressure and 9/16" High Pressure (API Type III Connection)
- -423° to 1000°F (-252° to 540°C) Temperature Range

GV Series Wellhead Gauge Valve Features:

- One Inlet, 3 Outlet ports, standard using 9/16" HP (API Type III connection), other sizes available
- 30,000 psi MAWP capable, 20,000 psi MAWP NACE capable
- Use with BV Series Bleed Valve (below) in any outlet port to create Block and Bleed valve

BV Series Bleed/Vent Valve Features:

- 3/8" and 9/16" connections to match GV Series Gauge Valves above (API type III connection available)
- Vent port tapped (1/8" NPT) for plumbing to safe area
- Vent Valve can be rated to 30,000 psi in closed position, 15,000 psi in open position.

All Parker Autoclave Engineers products are designed in accordance with ASME B31.3 Chapter IX High Pressure Piping standards.

ENGINEERING YOUR SUCCESS.

MVBB Series: Pressures to 20,000 psi (1380 bar)

Single Block & Bleed Needle Type Manifold Valve

Principle of Operation:

Parker Autoclave Engineers series MVBB block and bleed needle valve is a two stem manifold valve providing an economical and convenient method of isolating and venting or pressurization when calibrating pressure transmitters and gauges.

The valve utilizes Parker Autoclave Engineers Mini Valve packing and stem design making it compact and easy to use. The valve can be surface or panel mounted for safe operation. Manifold style valves reduce the number of fittings and space required for installation.

MVBB Single Block & Bleed Manifold Valve Features:

- MVBB Series valve design provides large valve performance in a small package
- Tubing sizes: 1/4" and 3/8". Pipe size: 1/2" NPT
- UNS S31600, CW 316 Stainless Steel body construction as standard. Additional Material options including NACE approved (SOG) materials are available.
- Rising stem/barstock body design
- Metal-to-metal seating achieves bubble-tight shut-off, longer stem/seat life in abrasive flow, greater durability for repeated on/off cycles and excellent corrosion resistance
- PTFE Glass packing provides dependable stem and body sealing with temperatures from -100° to 650°F (-70° to 340°C)
- Stem and packing gland design have been selected to achieve extended thread cycle life and reduced handle torque

Traceability of the materials used is ensured by use of heat and purchase order codes etched on valve body that also includes model number, MAWP rating, and material type references. All MVBB valves include connection collar and gland nut unless requested otherwise. Parker Autoclave Engineers' valves are complemented by a complete line of Medium Pressure Cone & Thread fittings, tubing, check valves, relief valves, and line filters that provide a reliable bubble tight seal for dependable performance in gas or liquid service.

Tube Outside Diameter Size (inches)	Connection Type	Orifice Size Inches (mm)	Rated C_v^*	Pressure Rating psi (bar) @Room Temperature**
1/4	SF250CX (1/4" MP)	0.094 (2.4)	0.20	20,000 (1380)
3/8	SF375CX (3/8" MP)	0.094 (2.4)	0.20	20,000 (1380)
1/2	NPT	0.094 (2.4)	0.20	15,000 (1035)

Notes

** For complete temperature ratings see pressure/temperature rating guide in Technical Information section.

To ensure proper fit use Parker Autoclave tubing

Valve Packing Options:

Standard Parker Autoclave Engineers valves with PTFE packing may be operated to 450°F (232°C). For additional temperatures, see options below and include suffix code in part number of valve selected:

- TG** Standard valve with PTFE-Glass packing -100° to 650°F (-70 to 340°C)
- B** Cryogenic trim materials and PTFE packing required when below 0°F to -100°F (-73°C)

Note: Refer to the Tools, Installation, Operation and Maintenance catalog for proper connection, packing, seating & running torques.

Ordering Guide:

MVBB Series valves are furnished complete with connection components, unless otherwise specified. Valve options on page 15 do not apply for MVBB Manifold Valves.

Building a Part Number: Example: 20MVBB6

Example Part Number:	20MVBB	6	XX
Ordering Parameters/Options:	Valve Series	Outside Diameter Tube Size	Options
Table Reference: (see below)	A	B	C

A - Valve Series

20MVBB	20,000 psi Mini MVBB Block & Bleed Valve
15MVBB	15,000 psi Mini MVBB Block & Bleed Valves

B - Tubing OD or Pipe Size

#	1/4" MP (20MVBB option only)
6	3/8" MP (20MVBB option only)
P8	1/2" Pipe NPT only (only applicable for 15MVBB Valve Series)

E - Options (Multiple Options can be chosen)

TG	PTFE Glass (25%) Packing (to 650°F)
B	Low Temperature service required below 0°F (-18°C)
K	Antivibration Gland (replaces standard gland)
*SOG	NACE Material, Hardness Verification/Certificate
**2507	UNS 32750, 2507 Super Duplex Wetted Materials
***IN625	UNS N06625 Inconel 625 Wetted Materials

Notes:

For 1/4" MP (typically 4 code) option leave part code blank. ie; 20MVBB
316 SS valve bodies are cold worked and not suitable for use in NACE (ISO 15156) applications. If required, contact factory for options.

* SOG suffix also changes CW 316 SS Body material to Annealed 316 SS suitable for NACE service, Pressure reduction of 60% possible

*** Special Materials often have reduced MAWP ratings, see Technical brochure for assistance and for additional material options

Basic MVBB Repair Kits:

MVBB Valves are easily repaired. Add "**R**" to front of valve catalog number for proper repair kit (example: R20MVBB)

Include any catalog number suffix marked on original part when ordering repair kit. (ie; R20MVBB6-SOG)

Material of Construction:

Item #	Description	Material
1	Spring Pin	18-8 SS
2	Handle	316 SS
3	Stem	316 SS
4	Packing Gland	316 SS
5	Body	316 SS

20DBNV Series: Pressures to 20,000 psi (1379 bar)

Double Block & Bleed Needle Type Manifold Valve

Principle of Operation:

Parker Autoclave Engineers DBNV double block and bleed needle valve provides true double valve isolation with a third vent valve in between for venting or bleeding, meeting both the API and OSHA valve definitions. Typically used as an interface with other components, usually pressure measurement transmitters, gauges and switches but can also be used for chemical injection, reducing leak points typical of a multi-valve fabrication.

A Double Block & Bleed valve can provide isolation in both the upstream and downstream directions, even in high-pressure or high-temperature situations. Isolation is important in cases where leakage through a valve could have major consequences.

DBNV Double Block & Bleed Manifold Valve Features:

- 20DBNV Series valve design provides large valve performance in a small package
- Tubing sizes: 1/4" to 3/4" Medium Pressure
- Rising stem/barstock body design typical of SM Series Valves
- Metal-to-metal seating achieves bubble-tight shut-off, longer stem/seat life in abrasive flow, greater durability for repeated on/off cycles and excellent corrosion resistance
- PTFE packing below stem threads provide dependable stem and body sealing. Optional packing materials available.
- Non-Rotating Stems prevent stem/seat galling
- Temperature Rated -423° to 1200°F (-252° to 650°C) with options
- Manufactured with UNS S31600 cold worked 316 stainless steel made to PAE proprietary standard

Parker Autoclave Engineers DBNV Manifold valves are complemented by a complete line of high pressure fittings and tubing. Traceability is ensured by use of heat and purchase order codes etched on valve body that also include model number, MAWP rating, and material type references. All valves include connection collar and gland nut unless requested otherwise.

Tube Outside Diameter Size (inches)	Connection Type	Orifice Size Inches (mm)	Rated C_v^*	Pressure Rating psi (bar) @Room Temperature**
1/4	SF250CX (1/4" MP)	0.093 (2.36)	0.10	20,000 (1379)
3/8	SF375CX (3/8" MP)	0.093 (2.36)	0.27	20,000 (1379)
9/16	SF562CX (9/16" MP)	0.312 (7.92)	0.65	20,000 (1379)
3/4	SF750CX20 (3/4" MP)	0.438 (11.2)	2.52	20,000 (1379)
1/4	F250C (1/4" HP)	0.093 (2.36)	0.08	20,000 (1379)
9/16	F562C (9/16" HP)	0.093 (2.36)	0.27	20,000 (1379)

Notes

** For complete temperature ratings see pressure/temperature rating guide in Technical Information section.

To ensure proper fit use Parker Autoclave tubing

Valve Packing Options:

Standard Parker Autoclave Engineers valves with PTFE packing may be operated from 0°F (-17.8°C) to 450°F (232°C). High and Cryogenic temperature packing and/or extended stuffing box are available for service from -423°F (-252°C) to 1200°F (650°C) by adding the following suffixes to catalog order number:

- B** Cryogenic trim materials and PTFE packing required when below 0°F (-18°C) to -100°F (-73°C)
- LT** Extended stuffing box valve with PTFE packing and Cryogenic trim materials to -423°F (-252°C)
- TG** Standard valve with PTFE-Glass packing -100°F (-73°C) to 600°F (316°C) (See also -B option above when below 0°F (-18°C))
- GY** Standard valve with Graphite Yarn packing 32°F (0°C) to 800°F (427°C). Used when selecting HT option.
Note: 3/4" valve using graphite yarn packing has significant increase in torque needed to actuate valve at pressure. Contact factory with application detail for assistance.
- HT** Extended stuffing box valve with Graphite Yarn packing to 1200°F (650°C)

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Ordering Guide:

For complete information on available end connections, see end connections options below. 20DBNV valves are furnished complete with tube connections.

Building a Part Number: *Example: 20DBNVM4M4-XX*

Example Part Number:	20DBNV	M4	M4	-	XX
Ordering Parameters/Options:	Valve Series	Tube Connection	Vent Connection		Options
Table Reference: (see below)	A	B	C		D

A - Valve Series

20DBNV	20,000 psi Double Block and Bleed Series Needle Valve
--------	---

B - Tube Connection (see chart below)

M4	SF250CX (1/4" MP)
M6	SF375CX (3/8" MP)
M9	SF562CX20 (9/16" MP)
M12	SF750CX (3/4" MP)
H9	F562C (9/16" HP) (API Type III connection)

C - Vent Connection

M4	SF250CX (1/4" MP) - 20,000 psi MAWP
M6	SF375CX (3/8" MP)
P4	1/4" Female NPT - 15,000 psi MAWP

D - Options (See additional options on page 15)

K	Antivibration Gland (replaces standard gland)
B	Cryogenic Trim materials required when below 0°F (-18°C) (included in LT)
LT	Low Temperature Extension (to -423°F) (includes PTFE packing)
TG	PTFE Glass (25%) Packing (to 600°F)
GY	Graphite Yarn Packing (to 800°F) [GY Packing increases Handle Torque, contact factory]
HT	High Temperature Extension (to 1200°F) (includes GY packing)
*SOG	NACE Material, Hardness Verification/Certificate
**2507	UNS 32750, 2507 Super Duplex Wetted Materials
***IN625	UNS N06625 Inconel 625 Wetted Materials

Notes:

316 SS valve bodies are cold worked and not suitable for use in NACE (ISO 15156) applications. If required, contact factory for options.

* SOG suffix also changes CW 316 SS Body material to Annealed 316 SS suitable for NACE service, Pressure reduction of 60% possible

*** Special Materials often have reduced MAWP ratings, see Technical brochure for assistance and for additional material options

Basic DBNV Repair Kits:

DBNV Valves are easily repaired. Add "R" to front of valve catalog number for proper repair kit (example: R20DBN-VH9M4).

Include any catalog number suffix marked on original part when ordering repair kit. (ie; R20DBNVH9M4-SOG).

Material of Construction:

G - Packing Gland mounting hole drill size • H* - Dimension is with stem in closed position • * 3/4" Mounting Holes are parallel (at top of valve) using dimensions given.
 Panel mounting drill size: 0.22" all valves • All dimensions for reference only and subject to change • For prompt service, Parker Autoclave stocks select products. Consult factory.

For complete information on available options, contact your Sales representative. 20DBNV Series valves are furnished with connection components unless otherwise specified.

Oil & Gas Wellhead Gauge/Bleed Valve:

API 6A Single Block Gauge Valve with Optional Bleed Valve

Pressures to 30,000 psi (2070 bar)

Principle of Operation:

Parker Autoclave Engineers Wellhead Gauge valve was designed using the API Type III connection (9/16" HP) and materials suitable for use in NACE (SOG) defined corrosive applications. The 9/16" HP connection - designed for non-NACE 30,000 psi application, when used with Annealed 316 SS instead of our standard cold worked 316 SS, is suitable to 20,000 psi MAWP. Standard Material Medium Pressure connections hold MAWP to 20,000 psi.

The 30GV is a single block valve with one inlet and 3 shared outlet connections. A separate Bleed Valve (20BV or 30BV) optioned with the same 9/16" HP Male connection as explained above, can be used in any of these ports to provide the bleed function if required. The other ports can be used with Pressure Gauge (PAE H-Style) and/or Pressure or Temperature Transmitter.

Bleed/Vent Valve can also be used to evacuate trapped air from pressure systems up to 30,000 psi (2070 bar)

Wellhead Gauge Features:

- One inlet, three outlet of same size and type
- Metal-to-metal bubble tight shut-off
- PTFE packing below stem threads provides dependable sealing
- UNS S31600 cold worked 316 SS as standard (optional annealed materials available)

Bleed Valve Features:

- One piece hex body construction allows easy installation
- Vent port tapped 1/8" NPT for plumbing to safe area
- Tee handle for easy operation
- Positive blow out prevention on stem
- "Adapter Male" * One Piece Male Medium or High Pressure connection, sized as required
- *Adapter Male connection is made to include the matching gland thread as well as the collar spacing and the typical tubing cone tip to form a one-piece connection.

Warning: Vent Outlet position is not controllable once torqued or damage will occur.

Notes

* Rating shown is in closed position.

@ For Explanation of ASM Connection, see Adapter Section in Catalog

BV Valve Rating @ 15,000 psi (1035 bar) in open position.

Glands and collars included in all standard assemblies. Consider using "-WO" suffix when using BV Bleed Valve and/or H-Style Gauge that won't require use.

Ordering Guide:

Catalog number is created based on customer selection of product parameters, see below for example.

GV Series Wellhead Gauge Valve

Building a Part Number: <i>Example: 30GV9078-XXX</i>						
Example Part Number:	30GV	9	07	8	-	XXX
Ordering Parameters/Options:	Valve Series	Outside Diameter Tube Size	Stem Type	Body Pattern		Options
Table Reference: (see below)	A	B	C	D		E

A - Valve Series	
20GV	Wellhead Gauge Valve
30GV	Wellhead Gauge Valve

B - Outside Diameter Tube Size	
6	3/8"
9	9/16"

C - Stem Type	
00	One Piece Vee Stem
07	Non-Rotating Vee Stem

D - Body Pattern	
8	4 Ports, 1 Inlet, 3 Outlets

E - Options	
WO	"With Out" Collar and Gland in all connectons
K	Antivibration Gland (replaces standard gland)
B	Cryogenic Trim materials required when below 0°F (-18°C) (included in LT)
TG	PTFE Glass (25%) Packing (to 600°F)
*SOG	NACE Material, Hardness Verification/Certificate
***HC	UNS N10276 Hastelloy C276, Wetted Materials (Annealed)
***IN625	UNS N06625 Inconel 625 Wetted Materials (Annealed)
***2507	UNS 32750, 2507 Super Duplex Wetted Materials (Annealed)

Notes:

316 SS valve bodies are cold worked and not suitable for use in NACE (ISO 15156) applications. If required, contact factory for options.

* SOG suffix also changes CW 316 SS Body material to Annealed 316 SS suitable for NACE service, Pressure reduction of 60% possible

*** Special Materials often have reduced MAWP ratings, see Technical brochure for assistance and for additional material options

		1.50 (38)	1.50 (38.10)	1.50 (38.10)	1.50 (38.10)

Notes:
*Adapter Male connection is made to include the matching gland thread and collar spacing along with typical tubing tip to form one-piece connection. "Warning" Rotation position is not controllable once torqued or damage will occur.
Bleed Valve max pressure is reduced to 15,000 psi when in OPEN position due to outlet connection

All dimensions for reference only and subject to change • For prompt service, Parker Autoclave stocks select products. Consult factory.

Material of Construction:

Item #	Description	Material
1	Handle	Aluminum
2	Spring Pin	18-8 SS
3	O-Ring	FKM
4	Body	316 SS
5	Hex Socket Set Screw	300 Series SS
6	Stem	316 SS

Note: No Repair Kit available for this item

Valve Options:

High/Low Temperature Extension:

This option is only available on 20DBNV Double Block & Bleed Valves.

- HT High Temperature (over 800°F (427°C))
- LT Low Temperature (under -100°F (-73°C))

Valve Series	Outside Diameter Tube Size (inches)	Dimensions "A" inches (mm)	Vent Stem Extension (Not Shown)
20DBNV	1/4"	6.16 (157)	5.68 (144)
	3/8"	6.16 (157)	5.68 (144)
	9/16"	6.62 (160)	5.68 (144)

HT option code includes Graphite (-GY) packing
 LT option code includes 316 SS Trim material and PTFE packing

Needle Valve Clam Shell Handle Lockout:

(order separately using part numbers shown below, padlock not included)

Clam Shell Handle locks are provided to lockout valves in open or closed position preventing unauthorized personnel from actuating valve during shutdown or emergency situations. This clamshell design is available in four (4) sizes dependent on handle length:

- P/N AE004855 – 1" to 2.5" handle length
- P/N 90088 – 2.5" to 5.0" handle length
- P/N 90194 – 6.5" to 10" handle length
- P/N AE004350 – 8" to 13" handle length

Needle Valve

Yoke Series: Large Bore, Reduced Torque
15,000 psi, 43,000 psi, 50,000 psi

15Y, 43Y and 50Y Series

Principle of Operation:

Parker Autoclave Engineers (PAE) Yoke Series valves are extra heavy-duty, plant grade instrument valves for industrial and severe service applications. Designed in accordance with ASME B31.3 Chapter IX standards, yoke valves feature a stainless steel yoke frame that removes the stem threads away from any process leakage past the packing and includes a heavy duty bearing assembly providing low closing torque for ease of operation. Yoke Series valves are designed for use with Parker Autoclave Engineers Medium or High Pressure tubing and fittings.

Medium and High Pressure Yoke Valve Features:

- Temperature Rated -100° to 800°F (-73° to 427°C) with options
- Manufactured as standard with UNS S31600 cold worked 316 stainless steel to PAE proprietary specification
- Metal-to-metal seating achieves bubble-tight shut-off, longer stem/seat life in abrasive flow, greater durability for repeated on/off cycles and excellent corrosion resistance.
- PTFE packing provides below stem threads provide dependable stem and body sealing. Optional packing materials available.
- Stem sleeve and packing gland materials have been selected to achieve extended thread cycle life and reduced handle torque
- Choice of Vee (shutoff) or Flow Regulating stem tips. N-Dura Coating or Stellite® material option for severe service.
- Available in straight or angle body patterns. Replaceable Seat option available.

Traceability is ensured by use of heat and purchase order codes etched on valve body that also includes model number, MAWP rating, and material type references. All valves include connection collar and gland nut unless requested otherwise. Parker Autoclave Engineers' Yoke Style valves are complemented by a complete line of Medium and High Pressure Cone & Thread fittings, tubing, check valves, relief valves, and line filters as required.

Valve Series	Tube Size (inches)	Running Torque inch-lbs. (N.m)	Seating Torque inch-lbs. (N.m)	MAWP psi(bar)
15Y12	3/4" MP	65 (7)	144 (16)	15,000 (1034)
15Y16	1" MP	87 (10)	192 (22)	15,000 (1034)
43Y16	1" HP	300 (34) - 25 ft/lb	540 (61) - 45 ft/lb	43,000 (2965)
50Y9	9/16" HP	85 (10)	180 (20)	50,000 (3450)

All Parker Autoclave Engineers products are designed in accordance with ASME B31.3 Chapter IX High Pressure Piping standards.

ENGINEERING YOUR SUCCESS.

Y Series: Torque Reduction Yoke Valves

Valve Series	Connection Type	Orifice Size Inches (mm)	Rated C_v^*	Pressure Rating psi (bar) @Room Temperature**
15Y12	SF750CX (3/4" MP)	0.438 (11.13)	2.41	15,000 (1034)
15Y16	SF1000CX (1" MP)	0.562 (14.27)	3.15	15,000 (1034)
43Y16	F1000C43 (1" HP)	0.375 (9.53)	2.3	43,000 (2965)
50Y9	F562C (9/16" MP)	0.188 (4.76)	0.66	50,000 (3450)

Notes

* C_v values shown are for 2-way straight valve pattern. For 2-way angle pattern, increase C_v value 50% (Based on water). Formula for converting C_v to volumetric flow can be found in Technical Information section.

** Maximum Allowable Working Pressure decreases as temperatures increase - see pressure/temperature rating guide in Technical Information section.

Y Series Flow Curve

To ensure proper fit use Parker Autoclave tubing

Valve Packing Options:

Standard Parker Autoclave Engineers valves with PTFE packing may be operated from 0°F to 450°F (-18° to 232°C). High and Cryogenic temperature packing and/or extended stuffing box are available for service from -100°F to 600°F (-73° to 315°C) by adding the following suffixes to catalog order number:

- B Standard valve with Cryogenic trim materials and PTFE packing required when below 0° to -100°F (-18° to -73°C)
- TG Standard valve with PTFE-Glass packing -100° to 600°F (-73° to 315°C) See also -B option above when below 0°F (-18°C)
- GY Standard valve with Graphite Yarn packing 32° to 800°F (0° to 427°C)

See "Technical Brochure "for Pressure/Temperature effect on temperatures above ambient.

Ordering Guide:

For complete information on available stem types, optional connections and additional valve options, see Needle Valve Options section or contact your Sales Representative. Y Series valves are furnished complete with connection components, unless otherwise specified.

G - Packing Gland mounting hole drill size • G1 - Bracket mounting hole size • H* - Dimension is with stem in closed position • All dimensions for reference only and subject to change
For prompt service, Parker Autoclave stocks select products. Consult factory.

Valve Options:

Stem Options:

Most Parker Autoclave Engineers' valves are available with either Vee (on-off) or Regulating (Flow Control) Stems in our standard valve body seat or with our optional replaceable seat as shown below:

VEE Stem

The Vee stem is used for direct on-off, metal-to-metal shut-off with quick-opening flow characteristics.

Regulating Stem

In some applications, more precise flow control is required than is possible with a Vee stem. For these cases, Autoclave offers a non-rotating, two-piece regulating stem which can be used for both control and shut-off. While it is not as precise as the control associated with the MicroMetering stem, especially with smaller flows, it does offer substantially better control than the Vee stem.

Replaceable Seat
(with Vee Stem)

Replaceable seat option is only available with Right-Angle Style body. Replaceable seat is supplied as standard with an additional seat - rotate to use second side. Can be used with either stem type. Options include Stellite material or N-Dura coating to increase service life.

Valve Options:

ES Stem Extender:

Stem extenders are offered for High and Low temperature operation or to extend through panel or barricade.

To order valve with Stem Extender, add “**ES-**” and length (6”, 12”, 18”, 24”) to beginning of valve part number e.g. ES12-50Y9071. Other lengths to special order.

To order Stem Extender only, provide valve model prefix e.g. ES12-50Y9. Handle not included – use same provided with original valve.

Needle Valve Clam Shell Handle Lockout:

(order separately using part numbers shown below, padlock not included)

Clam Shell Handle locks are provided to lockout valves in open or closed position preventing unauthorized personnel from actuating valve during shutdown or emergency situations. This clamshell design is available in four (4) sizes dependent on handle length:

P/N 90088 – 2.5” to 5.0” handle length

P/N 90194 – 6.5” to 10” handle length

needle
valve
actuators

Needle Valve Actuators

Pneumatic, Piston Type

For: MVE, P, 10V, SW, SM, SC, V, VM, QS,
Needle Valves to 150,000 psi (10340 bar)

Principle of Operation:

The need to control process and vent valves from a remote location makes air operated valves a vital component to many process applications.

All Parker Autoclave Engineer's needle valves are available with piston type pneumatic actuators. Six sizes of air actuators (light, mini-light, medium, heavy duty or extra heavy, single and double stage) are offered to meet the service requirements of Parker Autoclave Engineer's Low, Medium and High Pressure needle valves. Both air-to-open (normally closed) and air-to-close (normally open) designs are included in the product line. Dual acting Air-to-Open & Close actuators are also available.

For most Parker Autoclave Engineers valve series there is a choice of two or more actuator designs. This provides the most efficient and economical pneumatic valve operation for any combination of process requirements and available air pressure.

Actuators are available for outdoor service. These operators provide corrosion resistant components and prevent the ingress of outside elements. Weatherproof or Explosionproof (CUL/ATEX) Limit Switch position indication is available upon request.

Features and Benefits:

- Fail Close (Air-to-Open) or Fail Open (Air-to-Close) with Spring Return
- Dual Acting (Air-to-Open & Close) actuators are available in all sizes except Mini-Light and Light. Note: Not Fail-Safe
- Piston actuator sizing incorporates maximum allowable air pressure of 100 psi
- Yoke design for separation of process and air pressure/allows for limit switch position indication
- Visual Valve Position Indicator as standard - Limit Switch options available
- Anodized Aluminum Housing (for corrosion and wear resistance)
- -20°F to 200°F (-29° to 93°C) ambient temperature range. (for operation below 30°F (-1°C) dry air must be used and heat tracing is recommended.)

ENGINEERING YOUR SUCCESS.

General Information

Pneumatic Piston Actuators

Pneumatic Actuator:

Six sizes of air operators (light, mini-light, medium, heavy duty or extra heavy, single and double stage) are offered for remote on-off operation or automatic operation of Parker Autoclave Engineer's low, medium or high pressure valves. The actuators are available in air-to-open (normally closed) and air-to-close (normally open) designs.

Remote On-Off:

Parker Autoclave Engineer's air-operated valves, ATO (Air-to-Open), ATC (Air-to-Close), or AOC (Dual Acting Air-to-Open & Close) pneumatic actuators can be controlled by a 3-way manual low pressure valve or by a 3-way low pressure solenoid valve mounted in the actuator supply air line. Parker Autoclave Engineer's air-operated, high pressure valves permit process control from a remotely located panel without the necessity of piping high pressure lines to the control panel. Safety is greatly increased and process "hysteresis" is reduced. Prudent selection of ATO or ATC valves, together with the air controlling devices, permit the system design to "fail safe" in either the closed or open condition in the event of loss of air pressure, or electrical failure, or malfunction. Where explosion proof conditions are a requirement, pneumatic actuated valves can be considered. Remote mounting of the solenoid valve removes the potential from the hazardous area.

Duty Rating	Operator	Type	Ordering Suffix	Dimensions: inches (mm)	
				A	B
Light	Piston	Air -to-Open	OLP	5.50 (140)	2.81 (727)
		Air -to-Close	CLP	3.94 (100)	2.81 (72)
Mini Light	Piston	Air -to-Open	OHLP	3.84 (98)	3.06 (78)
		Air -to-Close	CHLP	2.61 (66)	3.06 (78)
Medium	Piston	Air -to-Open	O1S	8.25 (210)	5.69 (145)
		Air -to-Close	C1S	5.50 (140)	5.69 (145)
Heavy	Piston	Air -to-Open	O2S	11.88 (302)	5.69 (145)
		Air -to-Close	C2S	8.50 (216)	5.69 (145)
Extra Heavy Single Stage	Piston	Air -to-Open	HO1S	15.16 (385)	9.44 (240)
		Air -to-Close	HO1S	8.75 (218)	9.44 (240)
Extra Heavy Double Stage	Piston	Air -to-Open	HO2S	18.50 (470)	9.44 (240)
		Air -to-Close	HC2S	11.94 (303)	9.44 (240)

Outdoor Service Actuators

Medium	Piston	Air -to-Open	O1SOD	8.25 (210)	5.69 (145)
		Air -to-Close	C1SOD	5.50 (140)	5.69 (145)
Heavy	Piston	Air -to-Open	O2SOD	11.88 (302)	5.69 (145)
		Air -to-Close	C2SOD	8.50 (216)	5.69 (145)
Extra Heavy Single Stage	Piston	Air -to-Open	HO1SOD	15.16 (385)	9.44 (240)
		Air -to-Close	HC1SOD	8.75 (218)	9.44 (240)
Extra Heavy Double Stage	Piston	Air -to-Open	HO2SOD	18.50 (470)	9.44 (240)
		Air -to-Close	HC2SOD	11.94 (303)	9.44 (240)

Dual Acting: For Dual Acting (Air-to-Open & Close) option, replace "O" or "C" suffix code character with a "D" (Not available in Mini-Light or Light actuator sizes) Dimensions are the same as the Air-to-Close type actuators.

Piston Type Valve Actuators

Piston type air-operated valves offer a unique, reliable design providing for a long and dependable life. These actuators are quick acting, typically less than one (1) second activation time (Dependent on air flow rate to piston and process pressure required at valve inlet) and long lasting (tested to over 100,000 cycles).

Parker Autoclave Engineer's piston type actuators feature:

- Air-to-Open (Inlet Pressure may be required) or Air-to-Close with spring return or Dual Acting (no spring) Options
- Anodized Aluminum Piston and Housing (100 psi max)
- Yoke design for separation of process and air drive sections for safety †
- Ease of stem replacement
- Stem position indicator is standard †
- High actuator cycle life with lifetime lubrication
- 1/8" NPT air inlet connection except Extra Heavy duty has 3/8" NPT
- Single or Dual (Open & Close) Limit Switch options are available in Weatherproof, Explosionproof (Class 1, Division 1, Groups C & D, Temp. Group T6) versions. Consult Factory

Note: Air supply to Air-to-Close Actuator must be regulated to the pressure shown in subsequent charts based on application pressure. Air pressure over required pressure may damage valve seat.

Air-to-Open (ATO)

NOTE: Air inlet for air to open operator is located in the back, opposite the front of valve. For other locations, consult factory.

Air-to-Close (ATC)

† The standard Mini-Light operator does not utilize the yoke design. A yoke design is available upon request.

Dual Acting, Air-to-Open and Close
(Not available in Light or Mini-Light versions)

Note:
See "Yoke Mounting Dimensions" on page 17 should these mounting points be preferred instead of valve body mounting holes.

Technical Detail

Air Operated Materials:

Cylinder, piston, cover plates, spring housing: Anodized aluminum (for corrosion and wear resistance).
Yoke: Painted Steel

Technical Data:

Air Operator

- Maximum allowable working pressure: 100 psi (6.89 bar)
- Allowable piston temperature range: -20°F to 200°F (-29°C to 93°C), operating below 30°F (-1.1°C) with dry air only (heat trace may be needed for lower temperatures).
- Area of piston:
 - Light duty - 4.9 sq. in (31.6 sq. cm)
 - Mini-Light duty - 5.4 sq. in (34.8 sq. cm)
 - Medium duty - 19.6 sq. in (126.5 sq. cm)
 - Heavy duty - 39.2 sq. in (252.9 sq. cm)
 - Extra Heavy duty single stage - 56 sq. in (361.3 sq. cm)
 - Extra Heavy duty double stage - 112 sq. in (722.6 sq. cm)
- Approximate air usage/cycle @ 100 psi (6.89 bar) - For Dual Acting, double air usage shown below:
 - Light duty - .003 SCF (.00008 SCM)
 - Mini-Light duty - .007 SCF (.0002 SCM)
 - Medium duty - .04 SCF (.0011 SCM)
 - Heavy duty - .08 SCF (.0022 SCM)
 - Extra Heavy duty single stage - .33 SCF (.0095 SCM)
 - Extra Heavy duty double stage - .67 SCF (.019 SCM)
- Tested to 100,000 cycles at 100 psi (6.89 bar) with no leakage or signs of wear or fatigue.

To select Air-to-Close Needle Valve Actuator:

Example:

Need to know: Valve Model/Connection Size - **20SM9071 Needle Valve**
Indoor or Outdoor Service - **Outdoor Service**
Maximum Operating Pressure: **Fluid - 12,000 psi**
Maximum Available Air Pressure - **60 psi**
Select Actuator Type : Air-to-Close type (Normally Open)

Example: Using chart on page 6 (Air-to-Close Actuators), select **20SM9 Section**

Across top of chart, select **12 Ksi System Pressure** (12,000 psi max system pressure)

Go down that column to **20SM9 Section** to first row filled with number (air pressure)

First row with number is **55** – as your available **air pressure is 60 psi**, you do not have to go any further (if this number was more than 60, continue to next row)

This row (**Heavy Duty Actuator**) confirms that this actuator needs 55 psi to close the 20SM9 valve at 12,000 psi and you have 60 psi available. Suffix code for this actuator can be found in this chart or on page 4 - find “Heavy Duty - Air-to-Close” - Suffix code is “**-C2SOD**”, remembering the Service location was “Outdoor” - add this suffix to the 20SM9 body style of your choice. **Example: 20SM9071-C2SOD**

CAUTION: While testing has shown O-rings to provide satisfactory service life, both cyclic and shelf life may vary widely with differing service conditions, properties of reactants, pressure and temperature cycling and age of the O-ring, **FREQUENT INSPECTIONS SHOULD BE MADE** to detect any deterioration, and O-rings replaced as required. *Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower.

* Maximum pressure rating is based on the lowest rating of any components. Actual working pressure may be determined by tubing pressure rating, if lower.

** C_v data is for 2-way straight valves. For angle pattern add approximately 50% to the C_v value. † Maximum rating based on the valve rating.

CAUTION: While testing has shown O-rings to provide satisfactory service life, both cyclic and shelf life may vary widely with differing service conditions, properties of reactants, pressure and temperature cycling and age of the O-ring, FREQUENT INSPECTIONS SHOULD BE MADE to detect any deterioration, and O-rings replaced as required.

	Medium Duty -O1S	Air Pressure psi (bar)	40 (3)	40 (3)	40 (3)	40 (3)	40 (3)	45 (3)				15,000 (1035)	.12
		Spring Pre-Compression in (mm)	.12 (3)	.12 (3)	.12 (3)	.12 (3)	.12 (3)	.16 (4)					
		Stem travel in (mm)	.12 (3)	.12 (3)	.12 (3)	.12 (3)	.12 (3)	.12 (3)					

* Maximum pressure rating is based on the lowest rating of any components. Actual working pressure may be determined by tubing pressure rating, if lower.

** C_v data is for 2-way straight valves. For angle pattern add approximately 50% to the C_v value.

*** C_v varies because of spring compression limitations. The flow coefficient range is given for the maximum stem travel (lowest system pressure) to minimum travel (highest system pressure).

To select Air-to-Open Needle Valve Actuator:

Example:

Need to know: Valve Model/Connection Size - **20SM9071 Needle Valve**
 Indoor or Outdoor Service - **Indoor Service**
 Maximum Operating Pressure: **Fluid - 12,000 psi**
 Maximum Available Air Pressure - **60 psi**
 Select Actuator Type : Air-to-Open (Normally Closed)

Example: Using chart on page 12 (Air-to-Open Actuators), select **20SM9 Section**

Across top of chart, select **12 Ksi System Pressure** (12,000 psi max system pressure)

Go down that column to **20SM9 Section** to first row filled with number (Actuator air pressure needed)

First row with number is **75 (corresponding to Heavy Duty Actuator)**, – as your available air pressure is **60 psi**, you must go down to next actuator section where it shows that the Extra HD Single Stage actuator only needs 60 psi to actuate.

This row (- **Extra HD Single Stage Actuator**) confirms that this actuator needs 60 psi to open the 20SM9 valve at 12,000 psi and as you have 60 psi available. Suffix code for this actuator can be found in this chart or on page 2 - find “Extra Heavy Duty Single Stage - Air-to-Open” - Suffix code is “-**HO1S**”, remembering the Service location was “Indoor” (which is standard) - add this suffix to the 20SM9 body style of your choice. **Example: 20SM9071-HO1S**

CAUTION: While testing has shown O-rings to provide satisfactory service life, both cyclic and shelf life may vary widely with differing service conditions, properties of reactants, pressure and temperature cycling and age of the O-ring, **FREQUENT INSPECTIONS SHOULD BE MADE** to detect any deterioration, and O-rings replaced as required. *Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower.

* Maximum pressure rating is based on the lowest rating of any components. Actual working pressure may be determined by tubing pressure rating, if lower.

** C_v data is for 2-way straight valves. For angle pattern add approximately 50% to the C_v value.

*** C_v varies because of spring compression limitations. The flow coefficient range is given for the maximum stem travel (lowest system pressure) to minimum travel (highest system pressure).

CAUTION: While testing has shown O-rings to provide satisfactory service life, both cyclic and shelf life may vary widely with differing service conditions, properties of reactants, pressure and temperature cycling and age of the O-ring, FREQUENT INSPECTIONS SHOULD BE MADE to detect any deterioration, and O-rings replaced as required. All dimensions for reference only and subject to change. For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Needle Valve Actuators

Model FRC - Electric, 24 VDC Flow Regulating Control/Shutoff

10V2, SW, SM, VM Series
Needle Valves to 60,000 psi (4140 bar)

Principle of Operation:

The need to remotely control process flow electrically using high pressure multi-turn needle valves has long been sought. Pneumatic control of this type is an engineering challenge and cost prohibitive. Parker Autoclave Engineers solves these issues with our FRC line of electric actuators. When mated to our Regulating Stem Needle Valves and sent a 4-20mA signal, this actuated valve system provides precise control when needed and even provides enough torque to close the valve when not needed. This valve/actuator combination is capable of controlling Liquid or Gas flows.

The FRC Electric Actuator uses a 4-20mA input signal to turn the valve a programmed amount of turns from fully closed to fully open (typically 5 turns) while also providing a position feedback using an independent 4-20mA signal. It is also capable of closing the valve completely when a 4mA signal is received. Should power be lost, the valve will freeze and “remember” its last position and will not need to be re-zeroed. The FRC actuator is designed to work with a number of Parker Autoclave Engineers Needle Valves from 1/8" to 3/4" tube sizes and up to 60,000 psi (4140 bar) using the Regulating Stem option - see individual valve brochures for Cv and Flow Curves.

Features:

- Designed for Multi-turn Needle Valves, tubing/pipe sizes 1/8" to 3/4"
- Precise, accurate control using Regulating Stem option.
- Operational Temperature Range: -40° to 160°F (-40° to 70°C) - Valve temperature not to exceed 600°F
- Closing Torque capable of up to 60,000 psi (4140 bar) operation
- Weatherproof or Explosionproof (CSA approved Cls 1, Div 1 Grps B, C & D)
- Maximum Rotation Speed: FRC1 = 4 sec/turn, FRC2 = 15 sec/turn (5 turn open/close)
- Weatherproof Enclosure is supplied with TURCK 5 position cable connector and 20' of cable

ENGINEERING YOUR SUCCESS.

Specifications and Ordering Guide:

Electric Actuator

Electrical Specifications:

- Electrical Input: 24VDC only, 72 Watt maximum
- Control Input: 4-20mA
- Position Feedback: Independent 4-20mA
- Position Detection: Hall Sensors
- Motor: BLDC brushless DC motor

Position on Powerloss:

- Remembers Last Position
- Reseats Valve if Current is Between 3.0 and 4.16mA

Mechanical Specifications:

- Standard Enclosure - EPD Coated NEMA 4/IP65 Equivalent
- Optional Anodized Aluminum Explosion-Proof Enclosure, Nema 8/IP67, CSA Approved for Class 1, Division 1, Groups B, C, D / T6 Areas
- 500+ Positions per turn (+/- 0.25° Position Accuracy), 3243 Actuator Positions over Full Span
- Maximum Rotation Speed: #1 Actuator = 4 sec/turn (5 turn open/close), #2 Actuator (high torque) = 15 sec/turn (5 turn open/close)
- Actuator Operating Temperature -40°(-40°C) to 160°F(70°C), Valve Temperature not to exceed 600°F
- Actuator life Expectancy: 250,000 cycles
- Gears and Bearings are Lifetime Lubricated
- 20 ft. cable included with 6 pin/5 wire connector (FRC1 and FRC2 Weatherproof version only)
- Wiring Terminal, Maximum Wire Size: 18 Gauge
(To Terminate larger gauge wire, see Option Code XPFL below)

Ordering Guide: [reference individual Valve Series brochure for exact valve detail]

Actuators

Micro-Metering Needle Valve Electric Flow Control

Pressure to 60,000 psi (4137 bar)

Principle of Operation:

The Parker Autoclave Engineers Micro-Metering Flow Control Valves are designed for modulating flow or pressure control in industrial and research applications at temperatures of 600°F (315°C) or below. Using our standard Micro-Metering valves configured for many different pressures and tube connection sizes, these valves are capable of very fine flow control with pressures up to 60,000 psi using an electric, multi-turn microprocessor controlled actuator. The combination of these two precision, high quality components, provide a superior low flow, high pressure control valve for use with either liquid or gas.

Electric Flow Control Valve Features:

The microprocess controlled motor guarantees optimum voltage, current and torque control when starting, running or stopping valve rotation. The microprocessor also assures accurate stem location and repeatability.

- Power Requirement: 24 VDC/50 Watt Minimum
- Control Input: 4-20 mA (200 ohm) or 0-10 VDC (18K ohm)
- Rotation Speed: 10 RPM (6 turn maximum)
- Operating Temperature: -20°F (-30°C) to 185°F (85°C)
- Two (2) foot lead cable supplied
- Anodized Aluminum Housing, Satin Anodized, IP65 (NEMA 4) Weatherproof

Note:

Minimum Flow is factory set and occurs at "0" position. Do Not Operate the valve below the zero position or damage WILL result. (Valve is only for metering flow and cannot be used to shut OFF flow.)

ENGINEERING YOUR SUCCESS.

Electric Flow Control: Pressures to 60,000 psi (4137 bar)

Part Number	Tube Outside Diameter Size (inches)	Connection Type	Orifice Size Inches (mm)	Rated C_v^*	Pressure Rating psi (bar) @Room Temperature**
10VRMM	1/8	W125	0.062 (1.57)	0.004	15,000 (1034)

60VRMM	3/8	F375C	0.062 (1.57)	0.004	60,000 (4137)

Notes

** For complete temperature ratings see pressure/temperature rating guide in Technical Information section.

Micro-Metering Needle Valve Feature:

For detailed product description see VRMM MicroMetering Series brochure.

- Barrel and Thimble provided visual feedback of position
- 25 Thimble divisions each representing 0.001" of stem travel
- One revolution = 0.025" stem travel
- UNS S31600/S31603, 316/316L Stainless Steel body material
- Connection types, pressure and sizes change by model type
- Temperature Range: -100°F to 600°F (-73° to 315°C) with options
- Replaceable Seat has two seat sides 180° apart

10V2 and SW Series Flow Curve for Vee and Regulating Stem Valves

* Distance gland extends

Note: Minimum Flow is factory set and occurs at “0” position. Do Not Operate the valve below the zero position or damage WILL result.

Electric Flow Control: Pressures to 60,000 psi (4137 bar)

Valve Packing Options:

Standard Parker Autoclave Engineers 10VRMM, 15PVRMM, and 30VRMM series valves with PTFE packing may be operated from 0° to 450°F (-18° to 232°C). 60VRMM series has nylon/leather/nylon packing and may be operated from 40° F (4°C) to 230°F (110°C). Optional packing or trim material available by adding the following suffixes to catalog order number.

Suffix: **TG** for standard valve with PTFE glass packing, 0° to 600°F (-18° to 316°C).

B for standard valve with cryogenic trim materials and PTFE packing for temperatures below 0°F (-18°C) to -100°F (-73°C).

Parker Autoclave Engineers does not recommend compression sleeve connections below 0°F (-18°C) or above 650°F (343°C). For additional valve options, contact your Sales Representative.

Note: See Needle Valve options for stem and seat coatings for erosive service. Metering valve not to be used as a shutoff valve.

Minimum Flow is factory set and occurs at "0" position. Do Not Operate the valve below the zero position or damage WILL result.

Wiring Diagram:

Description		Wire Color
Power:	+24 VDC	Red
Signal Input:	+ Positive (4-20mA or 0-10 VDC)	Brown
Return:	- Negative	Black
Earth Ground:	Connected to Actuator Chassis Only	Green

Valve Maintenance:

VRMM Valve & Electric actuator is not user serviceable and must be returned to factory for repair. (Contact Repair Department at IPDAECRR@parker.com for ATR prior to shipment.)

Electric Flow Control Actuator Assembly/Wiring:

(Drawing is typical and varies in size across different models)

fittings &
tubing

Fittings and Tubing

Low Pressure "Speedbite", Single Ferrule to 15,000 psi (1034 bar)

Includes Check Valves, Filters & Couplings

Principle of Operation:

Parker Autoclave Engineers Low Pressure "Speedbite" and "Mini" Series fittings are designed to work with 10V/SW Series and Mini Series Low Pressure Valves as well as Low Pressure Tubing made of commercially sized 316/316L SS in the "Annealed" condition. Pressures to 15,000 psi and sizes from 1/16" to 1/2" are readily available.

The Speedbite connection is a single-ferrule bite-type compression fitting engineered for use with tubing designed by Parker Autoclave Engineers to a controlled hardness. Speedbite fittings employ a bite-type compression style single ferrule that is manually tightened.

Low Pressure Fittings and Tubing Features:

- Single-ferrule compression sleeve connections for up to 15,000 psi MAWP
- Operating temperatures from -100°F (-73°C) to 650°F (343°C)
- Fast easy 1-1/4 turn make-up of connection
- Available sizes are 1/16", 1/8", 1/4", 3/8", and 1/2"
- Fittings manufactured in accordance with ASME B31.3 Chapter IX standards with UNS S31600 316 SS material cold worked to Parker Autoclave proprietary standards (optional material available).
- Tubing manufactured to commercial OD tolerances ASTM A269 dual rated 316/316L material to a controlled hardness to facilitate proper ferrule bite.
- Molybdenum disulfide-coated gland nuts to prevent galling

All Parker Autoclave Engineers fittings are marked with manufacturers name, part number, material, heat code and maximum pressure for complete traceability.

ENGINEERING YOUR SUCCESS.

Fittings and Tubing

Low Pressure Fittings - Pressures to 15,000 psi (1034 bar)

Each fitting or adapter uses UNS S31600 cold worked 316 Stainless Steel and are manufactured in accordance with ASME B31.3 Chapter IX standards. (Optional Materials available, contact factory for selection).

(See “Technical Brochure” for Pressure/Temperature effect on temperatures above ambient.)

Connection Components:

All valves and fittings are supplied complete with appropriate glands and compression sleeves. To order these components separately, use order numbers listed. When using plug, ferrule sleeve is not required. Tubing pressure caps can be found in Adapter Brochure.

Gland
SMN ()

() - Add Tube Size Code
1/8" - 20
1/4" - 40
3/8" - 60
1/2" - 80

Ferrule Sleeve
SSL ()

1/16" tubing system components are available in the mini-fitting series starting on page 6. 1/16" tubing components can be used in 10V Series valves and fittings if required.

To ensure proper fit use Parker Autoclave Engineers tubing.

Plug
SP ()

Example: 1/4" SW Series Gland - SMN40
Note: Special material glands are normally supplied with four flats in place of standard hex.

NACE/ISO 15156 Compatibility

All PAE Low Pressure “Speedbite” Fittings and Tubing can be made with materials suitable for NACE/ISO 15156 requirements. As per NACE and ISO-15156, it is contingent on the end user to select this material. As this compatibility limits the use of “cold worked” materials, pressure reduction in MAWP can be expected. Please consult our Technical Brochure where we identify the more popular annealed materials along with the pressure reduction. Our Sour Oil and Gas brochure has a more complete description of the available options for pressures up to 30,000 psi.

NACE Suffix adder options:

“-SOG” suffix is used along with optional material to generate a hardness verification of pressure containing parts to generate a NACE certificate of compliance.

Mini Series Straight Coupling

Fittings and Tubing

Low Pressure Tubing - Pressures to 15,000 psi (1034 bar)

Parker Autoclave Engineers offers a complete selection of annealed, seamless stainless steel tubing designed to match the performance standards of Parker Autoclave Low Pressure valves and fittings. This tubing is manufactured of UNS S316/S31603, 316/316L Stainless Steel and furnished in random lengths between 20 feet (6 meters) and 26.5 feet (8 meters). In order to ensure proper sleeve “bite” into tubing, Parker Autoclave Engineers specifies and controls the strength and hardness levels of both the tube and sleeve materials.

Inspection and Testing:

Parker Autoclave Engineers annealed low pressure tubing is inspected for compliance with specified defect restrictions as well as carburization or intergranular carbide precipitation. The tubing outside diameter and wall thickness is controlled within close tolerance to assure proper fit. Sample pieces of tube (for each lot) are tested to confirm mechanical properties for proper compression sleeve “bite” and pressure capability. Furthermore, the sample tubes are pressure tested as a final check.

Special Material:

In addition to the type 316/316L stainless steel tubing in the annealed condition listed in this section, Parker Autoclave Engineers has a limited stock of hard-to-obtain shorter lengths of the following tubing materials:

Monel*, Inconel 600*, Titanium Grade 2*, Hastelloy C276*, Inconel 625*, and Incoloy 825* (See Technical Catalog for additional information)

Note: * Trademark names, Please consult factory for stock availability. NACE MR0175/ISO 15156 Options are available. Consult Factory.

Tubing Tolerance:

Nominal Tubing Size inches	Tolerance/Outside Diameter inches (mm)
1/16	.064/.062 (1.62/1.57)
1/8	.128/.125 (3.25/3.18)
1/4	.254/.250 (6.45/6.35)
3/8	.379/.375 (9.74/9.53)
1/2	.505/.500 (12.83/12.70)

Tubing Details: 316/316L, UNS S31600/S31603 Stainless Steel (Annealed) to commercial OD sizing tolerances

*Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower. All dimensions for reference only and subject to change.

For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Fittings and Tubing

Low Pressure Check Valves - Pressures to 15,000 psi (1034 bar)

SWO Series O-Ring Check Valve

Provide unidirectional flow and tight shut-off for liquids and gases with high reliability. When differential drops below cracking pressure, valve shuts off. **(Not for use as relief valve.)**

Temperature Ranges:

Viton (FKM) O-ring (std.): 0° to 400°F (-18° to 204°C)
 Buna-N O-ring (-**BO** suffix): 0° to 250°F (-18° to 121°C)
 FFKM O-ring (-**KO** suffix): 30° to 500°F (-18° to 260°C)
 PTFE O-ring (-**TO** suffix): -100° to 400°F (-73° to 204°C)
 PTFE O-ring with Low Temp Spring (-**LTTO** suffix): to -100°F (-73°C)

Cracking Pressure: 20 psi (1.38 bar) ±30%. Springs for higher cracking pressures up to 100 psi available on special order for O-ring style check valves only.

Installation: Vertical or Horizontal as required. Flow Direction Arrow marked on valve body.

CAUTION: While testing has shown O-Rings to provide satisfactory service life, both cyclic and shelf life may vary widely with differing service conditions, properties of reactants, pressure and temperature cycling and age of the O-ring. FREQUENT INSPECTIONS SHOULD BE MADE to detect any deterioration, and O-rings replaced as required.

(See “Technical Brochure” for Pressure/Temperature effect on temperatures above ambient.)

Material of Construction:

Item #	Description	Material
1	Gland Nut	316 SS
2	Cover	316 SS
3	O-ring	FKM
4	Poppet	316 SS
5	Body	316 SS
6	Spring	302 SS

Typical spare parts found in Repair Kits

O-Ring Check Valve Repair Kits:

Check Valves are easily repaired. Add “R” to front of valve catalog number for proper repair kit (example: RSWO8800)
 See “Cover Torque” on page 14 for re-assembly. Include any catalog number suffix marked on original part when ordering repair kit.

Fittings and Tubing

Low Pressure Check Valves - Pressures to 15,000 psi (1034 bar)

SWB Series Ball Check Valve

Prevent reverse flow where leak-tight shut-off is not mandatory. When differential drops below cracking pressure, valve closes. With all-metal components, valve can be used up to 650°F (343°C). See Technical Information section for connection temperature limitations. **(Not for use as relief valve.)**

Ball and poppet are an integral design to assure positive, in-line seating without “chatter”. Poppet is designed essentially for axial flow with minimum pressure drop.

Cracking Pressure: 20 psi (1.38 bar) +/- 30%
Optional cracking pressures **NOT** available in Ball Style Check Valves

Temperature: Minimum operating temperature for standard ball check valves 0°F (-17.8°C). For low temperature option to -100°F (-73°C) add suffix **LT** (Low temperature spring).

Installation: Vertical or Horizontal as required. Flow Direction Arrow marked on valve body.

NOTE: For optional material see Technical Brochure. Special material check valves are normally supplied with four flats in place of standard hex.

(See “Technical Brochure” for Pressure/Temperature effect on temperatures above ambient.)

Material of Construction:

Item #	Description	Material
1	Gland Nut	316 SS
2	Cover	316 SS
3	Poppet	316 SS
4	Spring	302 SS
5	Body	316 SS

Typical spare parts found in Repair Kits

Basic Ball Check Valve Repair Kits:

Check Valves are easily repaired. Add “**R**” to front of valve catalog number for proper repair kit (example: RSWB6600)

See “Cover Torque” on page 14 for re-assembly. Include any catalog number suffix marked on original part when ordering repair kit.

Fittings and Tubing

Low Pressure Check Valves - Pressures to 15,000 psi (1034 bar)

**SWK Series Ball Type
Excess Flow Valves**

Protects pressure gauges and pressure instrumentation from sudden surges in flow or venting in the event of line failure.

Vertical Installation: Since this type of check valve employs a non-spring loaded ball, valve **MUST** be installed in **VERTICAL** position with arrow on valve body pointing **UP**. (cover gland up).

Resetting Valve: Equalize the pressure across the ball. The ball will drop and reset automatically.

Temperature: Operating temperature for standard ball excess flow valves -100°F to 650°F (-73° to 343°C).

(See “Technical Brochure” for Pressure/Temperature effect on temperatures above ambient.)

Material of Construction:

Item #	Description	Material
1	Gland Nut	316 SS
2	Cover	316 SS
3	Ball	302 SS
4	Sleeve	316 SS
5	Body	316SS

Typical spare parts found in Repair Kits

Ball Type Excess Flow Repair Kits:

Excess Flow Valves are easily repaired. Add “**R**” to front of valve catalog number for proper repair kit. (example: RSWK8802)

See “Cover Torque” on page 14 for re-assembly. Include any catalog number suffix marked on original part when ordering repair kit.

Fittings and Tubing

Low Pressure Check Valves - Pressures to 15,000 psi (1034 bar)

**SWK0 Series O-Ring Type
Excess Flow Valves**

Protects pressure gauges and other pressure instrumentation from sudden surges in flow due to operator error or line failure. This valve provides dependable, tight shut-off.

Vertical Installation: Since this type of check valve employs a non-spring loaded poppet, valve **MUST** be installed in VERTICAL position with arrow on valve body pointing UP. (cover gland up).

Resetting Valve: Equalize the pressure across the poppet. The poppet will drop and reset automatically.

Temperature Ranges:

Viton (FKM) O-ring (std.): 0° to 400°F (-18° to 204°C)
 Buna-N O-ring (-BO suffix): 0° to 250°F (-18° to 121°C)
 PTFE O-ring (-TO suffix): -100° to 400°F (-73° to 204°C)

CAUTION: While testing has shown O-Rings to provide satisfactory service life, both cyclic and shelf life may vary widely with differing service conditions, properties of reactants, pressure and temperature cycling and age of the O-ring. FREQUENT INSPECTIONS SHOULD BE MADE to detect any deterioration, and O-rings replaced as required.

CAUTION: See Tubing section for proper selection of tubing.

(See “Technical Brochure” for Pressure/Temperature effect on temperatures above ambient.)

Material of Construction:

Item #	Description	Material
1	Gland Nut	316 SS
2	Cover	316 SS
3	O-Ring	FKM
4	Sleeve	316 SS
5	Body	316SS

Typical spare parts found in Repair Kits

O-Ring Excess Flow Valve Repair Kits:

Excess Flow Valves are easily repaired. Add “R” to front of valve catalog number for proper repair kit (example: RSWKO6600)

See “Cover Torque” on page 14 for re-assembly. Include any catalog number suffix marked on original part when ordering repair kit.

Check and Excess Flow Valves

Note:

All check valves are furnished complete with connection components unless otherwise specified.

† Check Flow** - water, GPM

†† Check Flow** - CFM, nitrogen @ 500 psi (34.47 bar), RT

** - For flow using alternate fluids, consult Parker Autoclave Engineers.

*Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower. All dimensions for reference only and subject to change. For prompt service, Parker Autoclave stocks select products. Consult your local representative.

Fittings and Tubing

Low Pressure Line Filter - Pressures to 15,000 psi (1034 bar)

SLF Series Dual Disc Line Filters

Dual-Disc Line Filters are utilized in numerous industrial, chemical processing, aerospace, nuclear and other applications. With the dual-disc design, large contaminant particles are trapped by the upstream filter element before they can reach and clog the smaller micron-size downstream element. Filter elements can be easily replaced.

Materials:

Body, Cover, and Gland Nut - CW 316 Stainless Steel

Filter Element: 316L Stainless Steel, Sintered Disc Type
Downstream/upstream micron size 35/65 is standard. 5/10 or 10/35 also available when specified. Other element combinations available on special order.

SWF Series Cup Type Line Filters

High Flow Cup-Type Line Filters are recommended in low pressure systems requiring both high flow rates and maximum filter surface area. Widely used in the industrial and chemical processing fields, the cup design offers as much as six times the effective filter area as compared to disc-type units. In addition, the filter elements can be quickly and easily replaced.

Materials:

Body, Cover, and Gland Nut - CW 316 Stainless Steel.

Filter Element: 316L Stainless Steel, Sintered Cup Type.
Standard elements available in choice of 5, 35 or 65 micron sizes. **Note:** Filter ratings are nominal.

Spare Parts: Filter Elements are only replaceable part with either filter type. See chart on page 14 for Filter Element part numbers.

Temperature Range: Both Models -100° to 650°F (-73° to 343°C). (See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

NOTE 1: All filters furnished complete with connection components unless otherwise specified. All dimensions for reference only and subject to change. For optional materials, see Needle Valve Options section

NOTE 2: Parker Autoclave Engineers disc and cup type filters are designed to filter small amounts of process particles. It is recommended that all fluids are thoroughly cleaned prior to entering the higher pressure system.

NOTE 3: Special material filters are normally supplied with four flats in place of standard hex.

NOTE 4: Pressure differential not to exceed 1,000 psi (69 bar) in a flowing condition. Filter replacement is recommended.

NOTE 5: Larger micron size filter element is installed on the upstream (inlet) side.

** Larger micron size filter element is installed on upstream (inlet) side. All filters furnished complete with connection components unless otherwise specified.

Other micron sizes available on special order. Change last digits of the catalog number accordingly. For optional materials, see Needle Valve Options section.

*Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower. All dimensions for reference only and subject to change.

For connection make-up instructions see "Tools and Installation" brochure.

SLF Dual Disc Line Filters

SWF Cup Type Line Filters

Fittings and Tubing

Medium Pressure Cone & Thread

Pressures to 20,000 psi (1379 bar)
Includes Check Valves, Filters & Couplings

Principle of Operation:

Parker Autoclave Engineers Medium Pressure Cone and Thread connections were created for those applications that require higher flow rate capability. Designed for a maximum of 20,000 psi MAWP using high tensile strength cold worked 316 Stainless Steel material as standard. In addition we offer even larger ID tubing de-rated to 15,000 psi for maximum flow rate capability. This Medium Pressure series has all the benefits of the High-Pressure version with all metal sealing, temperature ranges from -423° to 1200°F (-252° to 650°C), and includes many different material options like 2507 Super Duplex, Hastelloy C276, 6Mo (25-4SMO), and Inconel 625 to mention just a few.

Fittings and tubing found in this section are designed using ASME B31.3 Chapter IX standards to be compatible with our 15SM & 20SM, 20DBNV, 20DV Needle Valves, and all of our various ball valve configurations including Subsea. There is a Parker Instrumentation fitting for just about any application of fluids under extreme pressure and/or temperature condition.

Medium Pressure Fittings and Tubing Features:

- Utilize “SF” Style High Flow Medium Pressure Coned-and-Threaded connections (see Tools and Installation for typical port dimensions)
- Available sizes are 1/4", 3/8", 9/16", 3/4", 1" and 1-1/2"
- Standard Fitting Material is UNS S31600 with Tubing manufactured using UNS S31600/S31603, 316/316L stainless steel material, cold worked to Parker Autoclave proprietary standards
- Operating Temperatures from -423° to 1200°F (-252° to 650°C)
- Anti-vibration connection components available, see page 15
- Special materials available when corrosion, temperature, or NACE/ISO 15156 requirements demand. (See Technical Catalog)

All Parker Autoclave Engineers fittings are marked with manufacturers name, part number, material, heat code and maximum pressure for complete traceability.

Medium Pressure “Slimline” Design

Collar in front of gland, keeping port size and fitting width to minimum

ENGINEERING YOUR SUCCESS.

Fittings

Medium Pressure Fittings - Pressures to 20,000 psi (1379 bar)

Parker Autoclave Engineers Medium Pressure fittings, nicknamed “Slimline SF”, are designed for use with SM Series valves and Parker Autoclave Engineers' Medium Pressure tubing. They incorporate coned-and-threaded connections with the orifice sized to match the high-flow 15,000 psi tubing options shown later in this brochure. For instructions on how to make this Medium Pressure Cone & Thread connection and the tools necessary to accomplish, see our “Tools and Installation” brochure.

(See “Technical Brochure” for Pressure/Temperature effect on temperatures above ambient.)

Connection Components:

All valves and fittings are supplied complete with appropriate gland and tubing collar. To order these components separately, use part numbers listed below. When using plug, collar is not required. Tubing Pressure Caps can be found in Adapter brochure.

Gland*
CGLX ()

Add tube size code ()

- 1/4" - 40
- 3/8" - 60
- 9/16" - 90
- 3/4" - 120
- 1" - 160
- 1-1/2" - 240

Example: 1/4" Gland - CGLX40

All Cone and Thread ports MUST utilize weep holes for safety. When weep hole is not available, we offer a gland nut with a "Slotted Male Thread" that provides this safety feature without the need for the separate port. Use suffix **-SMT** with Gland part number when needed.

NACE/ISO 15156 Compatibility

All PAE Medium Pressure Fittings and Tubing can be made with materials suitable for NACE/ISO 15156 requirements. As per NACE and ISO-15156, it is contingent on the end user to select this material. As this compatibility limits the use of “cold worked” materials, most of the choices except for 2507 Super Duplex come with significant pressure reductions. Please consult our Technical Brochure where we identify the more popular annealed materials along with the pressure reduction. Our Sour Oil and Gas brochure has a more complete description of the available options for pressures up to 30,000 psi.

NACE Suffix adder options:

"-SOG" suffix converts all pressure containing parts from cold worked 3166 SS to annealed condition material, requires hardness check, and NACE certificate is generated for each part. Pressure reductions of 60% (8,000 psi) are possible. Contact factory for other pressure/material options.

"-SOG10" suffix is the same as above but generates a part with thicker body capable of 10,000 psi MAWP (Used only with 316/316L Material)

Collar
CCLX ()

To ensure proper fit use Parker Autoclave Engineers tubing.

Special Materials:

Note: Special Material Fittings are supplied with CW 316 SS Glands and Collars as these parts do not touch flowing (wetted) media. To match the same material as selected for body, use either “**-SOG**” (Sour Oil or Gas - NACE) or “**-AP**” (“All Parts” (does not get hardness check typical of **-SOG** option)) suffix. Special material glands and adapter bodies are normally supplied with four flats (square) in place of standard hex. Include option suffix “**-H**” if hex is required.

For gland nut hex sizes and torque values, see “Tools and Installation” brochure. (See “Special Materials” torque chart for all materials other than CW 316 SS). *To order Antivibration Gland Fitting see page 15

Plug
CPX ()

Socket Head Flush Plug version, add “-F” suffix

90° Elbow: 45° Elbows are available, replace 00 with 45 [ie; CLX6645 or CLX1645]

Union Coupling Assembly

Union vs. Straight Coupling Comparison

In much the same as with a traditional Pipe Union, the PAE Union Coupling is used to easily disassemble tubing runs when valves or fittings need to be replaced after original installation. The Body and Insert are two different pieces in the same assembly. The body can slide down tubing leaving only the insert and the tubing tips engaged. Then with only minimal tube shift, the insert drops out allowing the tubing to be removed avoiding the need to disassemble multiple tubing sections from closest elbow.

Note: When Special Materials are requested, the only material that is changed is the Insert (wetted). If "All Parts" are to be requested, include suffix **"-AP"** or **"-SOG"** if for NACE/ISO 15156.

Tubing

Medium Pressure Tubing - Pressures to 20,000 psi (1379 bar)

Parker Autoclave Engineers offers a complete selection of austenetic, cold drawn stainless steel tubing designed to match the performance standards of Parker Autoclave valves and fittings. Parker Autoclave Engineers medium pressure tubing is manufactured specifically for high pressure applications requiring both strength and corrosion resistance. The tubing is furnished in random lengths between 20 feet (6 meters) and 26.5 feet (8.0 meters). The average is 24 feet (7.3 meters). Medium Pressure Tubing is available in six sizes and a variety of materials. All Parker Autoclave Engineers manufactured tubing is line marked repeatedly along the full length with our name, country of origin, Heat number, PO number, tube dimensions (Nominal OD and ID), PAE Part Number, Manufacturing Specification, and Pressure Rating (MAWP @ Room Temp).

Inspection and Testing:

Parker Autoclave Engineers' medium pressure tubing is inspected to assure freedom from seams, laps, fissures or other flaws, as well as carburization or intergranular carbide precipitation. The outside and inside diameters of the tubing are subject to special inspection and are controlled within close tolerances to assure proper fit. Sample pieces of tube for each lot are tested to confirm mechanical properties. Hydrostatic testing is also performed on a statistical basis and is conducted at the working pressure of the tube. Parker Autoclave will perform 100% hydrostatic testing at additional cost if desired.

Special Material:

In addition to the most commonly requested tubing materials CW 316 SS, 2507 Super Duplex*, and Inconel 625* (specifications on next page), we have other options outlined in our Technical brochure. These include NACE/ISO 15156 capable materials for a variety of corrosive applications.

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Note: * Trademark names, Please consult factory for stock availability.

Tubing Tolerance:

Parker Autoclave Engineers tubing is made to specifications that exceed all others as part of a complete "system" of products that have your safety always in mind. The outside dimension of this tubing is intentionally "undersized" to match the requirements of the threading die used to put the connection thread on the tubing. See actual dimensions and tolerancing below:

Nominal Tubing Size inches (mm)	Tolerance/Outside Diameter inches (mm)
1/4 (6.35)	.248/.243 (6.30/6.17)
3/8 (9.53)	.370/.365 (9.40/9.27)
9/16 (14.27)	.557/.552 (14.15/14.02)
3/4 (19.05)	.745/.740 (18.92/18.80)
1 (25.40)	.995/.990 (25.27/25.14)
1-1/2 (38.10)	1.495/1.490 (37.98/37.85)

Note:
Standard Tubing is manufactured in accordance with ASME B31.3 Chapter IX standards using UNS S31600/S31603, 316/316L Stainless Steel material, cold worked to Parker Autoclave proprietary standards.

Tubing outside diameter dimensions do not meet standard commercial tubing tolerances. Tubing outside dimensions are specifically chosen to meet tube threading die requirements.

Parker Autoclave Engineers components and tubing are designed as a "complete system" for safety and our fittings will not be compatible with standard "commercial" tubing.

Tubeing Details: 316/316L, UNS S31600/S31603 Stainless Steel (Cold Worked)

Note:

Caution should be exercised in proper selection of Medium Pressure Tubing based on actual operating conditions. Two series available with some sizes: 15,000 psi (1034 bar) and 20,000 psi (1379 bar).

*Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower.

See Technical Section for Temperature Ratings over 600°F (315°C)

All dimensions for reference only and subject to change. For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Coned-and-Threaded Nipples

Medium Pressure - Pressures to 20,000 psi (1379 bar)

For rapid system make-up, Parker Autoclave Engineers supplies pre-cut, coned-and-threaded nipples in various sizes and lengths for Parker Autoclave Engineers Medium Pressure valves and fittings.

Special Lengths:

In addition to the standard lengths listed in the table below, nipples are available in any custom length up to total stick length. Consult factory.

Material:

Catalog numbers in table refer to Type UNS S31600/ S31603, CW 316/316L Stainless steel. Optional materials available. When changing material selection, replace -316 with replacement material suffix (-2507 for 2507 Super Duplex, -IN625 for Inconel 625). Consult Technical Brochure for additional material options.

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Notes:

Caution should be exercised when selecting medium pressure nipples since two series are available: 15,000 psi (1034 bar) and 20,000 psi (1379 bar)

See medium pressure tubing section for pressures at various temperatures.

*Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower.

All dimensions for reference only and subject to change.

For Connection Torque requirements please see "Tools and Installation" brochure.

Check Valves

Medium Pressure - Pressures to 20,000 psi (1379 bar)

CX0 Series O-Ring Check Valve

Ordering part numbers can be found on page 12

Provide unidirectional flow and tight shut-off for liquids and gases with high reliability. When differential drops below cracking pressure*, valve shuts off. **(Not for use as relief valve.)**

Cracking Pressure:

20 psi (1.38 bar) $\pm 30\%$. Springs for higher cracking pressures up to 100 psi available on special order for O-ring style check valves only.

Temperature Range/O-ring Options:

Viton (FKM) O-ring (std.): 0° to 400°F (-18° to 204°C)

Buna-N O-ring (-BO suffix): -20° to 250°F (-29° to 121°C)

FFKM O-ring (-KO suffix): 0° to 500°F *(-18° to 260°C)

PTFE O-ring (-TO suffix): -100° to 400°F (-73° to 204°C)

PTFE O-ring with Low Temp Spring (-LTTO suffix): to -423°F (-252°C)

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Installation:

Vertical or Horizontal as required. Flow Direction arrow on valve body

CAUTION: While testing has shown O-Rings to provide satisfactory service life, both cyclic and shelf life may vary widely with differing service conditions, properties of reactants, pressure and temperature cycling and age of the O-Ring. FREQUENT INSPECTIONS SHOULD BE MADE to detect any deterioration, and O-rings replaced as required.

NOTE: For optional material see Technical Brochure. Special material check valves are normally supplied with four flats in place of standard hex.

Material of Construction:

Item #	Description	Material
1	Check Valve Body	316 SS
2	Cover	316 SS
3	Poppet	316 SS
4	Gland Nut	316 SS
5	Spring	302 SS
6	O-Ring	90 Duro FKM

Typical spare parts found in Repair Kits

Basic O-ring Check Valve Repair Kits:

Check Valves are easily repaired. Add "R" to front of valve catalog number for proper repair kit (example: RCX09900) See "Cover Torque" on page 12 for re-assembly. Include any catalog number suffix marked on original part when ordering repair kit.

Ball Check Valves

Medium Pressure - Pressures to 20,000 psi (1379 bar)

CXB Series Ball Check Valve

Ordering part numbers can be found on page 12

Prevent reverse flow **where leak-tight shut-off is not mandatory**. When differential drops below cracking pressure, valve closes. With all-metal components, valve can be used up to 800°F (425°C). See Technical Information section for connection temperature limitations. **(Not for use as relief valve.)**

Ball and poppet are an integral design to assure positive, in-line seating without “chatter”. Poppet is designed for axial flow with minimum pressure drop.

Cracking Pressure:

20 psi (1.38 bar) +/- 30% No optional cracking pressures available.

Temperature Range:

With All-Metal components, valve can be used to 800°F (425°C). Minimum standard operating temperature is -110°F (-79°C). For Low Temperature operation to -423°F (-252°C) use suffix “-LT” (Low Temp Spring)

(See “Technical Brochure” for Pressure/Temperature effect on temperatures above ambient.)

Installation:

Vertical or Horizontal as required. Flow Direction arrow on valve body

NOTE: For optional material see Technical Brochure. Special material check valves are normally supplied with four flats in place of standard hex.

Material of Construction:

Item #	Description	Material
1	Gland	316 SS
2	Gland Nut	316 SS
3	Cover	316 SS
4	Poppet	316 SS
5	Spring	302 SS
6	Check Valve Body	316 SS

Typical spare parts found in Repair Kits

Basic Ball Check Valve Repair Kits:

Check Valves are easily repaired. Add “R” to front of valve catalog number for proper repair kit (example: RCXB9900) See “Cover Torque” on page 12 for re-assembly.

Include any catalog number suffix marked on original part when ordering repair kit.

Excess Flow Valves

Medium Pressure - Pressures to 20,000 psi (1379 bar)

CXK Series Ball Type Excess Flow Valves (Surge Check)

Ordering part numbers can be found on page 12

Protects pressure gauges and pressure instrumentation from sudden surges in flow or venting in the event of line failure.

Vertical Installation: Since this type of check valve employs a non-spring loaded ball, valve **MUST** be installed in **VERTICAL** position with arrow on valve body pointing **UP**. (cover gland up).

Resetting Valve: Equalize the pressure across the ball. The ball will drop and reset automatically. Note: when in checked position, a small flow is permitted through the valve. See dimension chart on next page for checked flow rates).

Temperature Range:

With All-Metal components, Excess Flow Valve can be used from -423° to 800°F (-252° to 425°C).

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

NOTE: For optional material see Needle Valve Options section. Special material check valves may be supplied with four flats in place of standard hex.

Material of Construction:

Item #	Description	Material
1	Gland Nut	316 SS
2	Cover	316 SS
3	Ball, 1/2" Diameter	302 SS
4	Sleeve	316 SS
5	Check Valve Body	316 SS

Typical spare parts found in Repair Kits

Excess Flow Valve Repair Kits

Excess Flow Valves are easily repaired. Add "R" to front of valve catalog number for proper repair kit (example: RCK9902) See "Cover Torque" on page 12 for re-assembly. Include any catalog number suffix marked on original part when ordering repair kit.

Check and Excess Flow Valve Dimensions

NOTE: For optional material see Technical Brochure. Special material check valves are normally supplied with four flats in place of standard hex.

Note:

+ Check Flow - water, GPM
++ Distance across flats

* Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower. All dimensions for reference only and subject to change. For prompt service, Parker Autoclave stocks select products. Consult your local representative. To change material from standard 316SS, add material suffix (see Technical brochure for pressure reduction) after part number above. Please note: Only "wetted" material is changed, not collars and gland nuts. If needed, use additional suffix **-AP** (All Parts).

Line Filters

Medium Pressure - Pressures to 20,000 psi (1379 bar)

CLFX Series Dual Disc Line Filters

NOTE: Ordering Part Number can be found on Page 14

CXF Series Cup Type Line Filters

NOTE: Ordering Part Number can be found on Page 14

Dual-Disc Line Filters are utilized in numerous industrial, chemical processing, aerospace, nuclear and other applications. With the dual-disc design, large contaminant particles are trapped by the upstream filter element before they can reach and clog the smaller micron-size downstream element. Filter elements can be easily replaced.

Materials: Body, Cover, Gland Nut: CW 316 Stainless Steel.

Filter Element: 316L Stainless Steel, Sintered Disc Type. Downstream/upstream micron size 35/65 is standard. 5/10 or 10/35 also available when specified. Other element combinations available on special order.

High Flow Cup-Type Line Filters are recommended in medium pressure systems requiring both high flow rates and maximum filter surface area. Widely used in the industrial and chemical processing fields, the cup design offers as much as six times the effective filter area as compared to disc-type units. In addition, the filter elements can be quickly and easily replaced.

Materials: Body, Cover, Gland Nut: CW 316 Stainless Steel.

Filter Element: 316L Stainless Steel, Sintered Cup Type. Standard elements available in choice of 5, 35 or 65 micron sizes.

Note: Filter ratings are nominal.

Temperature Range: Both Models:

Oxidizing Fluids: 750°F (400°C) maximum

Non-Oxidizing Fluids: 900°F (480°C) -423°F (-252°C) minimum

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Spare Parts: Filter Elements are only replaceable part with either filter type. See chart on page 14 for Filter Element part numbers.

NOTE 1: All filters furnished complete with connection components unless otherwise specified. All dimensions for reference only and subject to change. Limited special material options are available, consult factory for assistance.

NOTE 2: Parker Autoclave Engineers disc and cup type filters are designed to filter small amounts of process particles. It is recommended that all fluids are thoroughly cleaned prior to entering the higher pressure system.

NOTE 3: Special material filters may be supplied with four flats in place of standard hex.

NOTE 4: Pressure differential not to exceed 1,000 psi (69 bar) in a flowing condition. This is indication to replace filter.

NOTE 5: Larger micron size filter element is installed on the upstream (inlet) side.

Dual Disc Line Filter Dimensions

Cup Type Line Filter Dimensions

* Maximum pressure rating is based on the lowest rating of any component including tubing used.

** Other micron sizes available on special order. Consult Factory.

For optional materials, see Technical Brochure

All dimensions for reference only and subject to change.

For prompt service, Parker Autoclave Engineers stocks select products.

Consult your local representative.

To change material from standard 316SS, add material suffix (see Technical brochure for pressure reduction) after part number above. Please note: Only "wetted" material is changed, not collars and gland nuts. If needed, use additional suffix **-AP** (All Parts).

For Connection Torque requirements please see "Tools and Installation" brochure.

Anti-Vibration Collet Gland Assembly

Medium Pressure - Pressures to 20,000 psi (1379 bar)

Series KCBGLX (sizes to 1-1/2" (38.10 mm))

For extreme conditions of vibration and/or shock in tubing systems, such as an unsupported line near a compressor, coned-and-threaded connections are offered with the Parker Autoclave anti-vibration collet gland assembly. Originally patented in 1968 the collet gland assembly is designed to be completely interchangeable with standard Parker Autoclave Engineers Medium Pressure gland connections, the collet gland assembly provides equally effective pressure handling capability.

In standard connection systems, the bending stresses on the threaded area of the tubing imposed by excessive vibration or movement may cause premature fatigue failure of the tubing at the back of the thread. By moving the stress concentration back to the unthreaded part of the tubing and providing a wedge-type gripping action, the Parker Autoclave Engineers anti-vibration collet gland assembly strengthens the entire structure while preventing rotation. With stress concentration reduced and overall stress level maintained well below the endurance limit of the material, the result is virtually unlimited vibrational fatigue life.

Series KCBGLX

A less complex and more economical design than other vibration-resistant connections, the collet gland assembly utilizes the same coned-and-threaded features of Parker Autoclave Engineers medium pressure connections. Series KCBGLX extends the gland nut to provide room for the tapered slotted collet. The design provides a slight difference in angles between the collet and the corresponding taper of the gland nut. As the nut is tightened, it acts to wedge the tapered end of the collet into a gripping engagement with the tubing.

Material:

316 SS with bonded dry film molybdenum disulfide to help prevent galling. Additional thread lubricant not needed.

Note:

- 1) To order valve and fitting components with anti-vibration assemblies add **-K** to catalog numbers.
- 2) Special material assemblies are normally supplied with four flats in place of standard hex.
- 3) See Tools and Installation Catalog for Installation Instructions including Torque Specifications.

Anti-Vibration Collet Gland Assembly

Medium Pressure - Pressures to 20,000 psi (1379 bar)

Anti-Vibration Collet Gland Assembly Details:

Complete Assembly Catalog Number	Part	Nominal Tubing Size Inches (mm)	Dimensions: Inches (mm)

All dimensions for reference only and subject to change.
For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Antivibration Gland assemblies made with any optional material will be coated with dry film molybdenum disulfide to help prevent galling. See Tools and Installation brochure for reduced torque ratings.

Series KCBGLX
20,000 psi (1379 bar)
(when used in PAE fittings or valves)

Standard Parker Autoclave Engineers collar not included in Antivibration Gland Assembly if ordered separately.

Always use back-up wrench on collet body when tightening collet nut to prevent over-torquing connection.

Assembly Instructions

Medium Pressure Fittings - Pressures to 20,000 psi (1379 bar)

Medium Pressure Connection: Step by Step Assembly Instructions

Step 1	Step 2	Step 3																				
																						
<p>Insert Coned and Threaded Nipple through Gland (Typical Elbow Fitting Assembly consisting of Fitting Body, Collar, Gland, and Coned and Threaded Nipple or Tube End.)</p>	<p>Thread Collar turning (Reverse Threaded to prevent rotation during torque process) onto Coned and Threaded Nipple end.</p>	<p>For proper Collar placement, thread Collar onto Nipple leaving 1-1/2 to 2 full threads exposed on Fitting side of Collar. Lubricate Gland Threads and Collar Contact surface with anti-seize compound and tube tip with process compatible lubricant (do not use metal-flake type on tube or adapter tip)</p>																				
Step 4	Step 5	Medium Pressure Gland Torque

3/8" MP	30 (41)																					
9/16" MP-15Ksi	55 (75)																					
9/16" MP-20Ksi	55 (75)																					
3/4" MP-15Ksi	75 (102)																					
3/4" MP-20Ksi	90 (122)																					
1" MP-15Ksi	135 (187)																					
1" MP-20Ksi	135 (187)																					
1-1/2" MP	200 (272)																					
<p>Insert Tube/Gland assembly into Fitting body, turning clockwise approximately 4-5 threads (if unable to turn full distance by hand, look for misalignment issues with tubing and correct for proper seal).</p>	<p>Use Torque Wrench to properly set (see chart in next frame) Cone & Thread Connections. (Available with wrench adapters in Tools and Installation brochure)</p>	<p>Torque for optional materials and pressures lower than maximum (above)</p>																				

Fittings and Tubing

High Pressure Cone & Thread

Pressures to 60,000 psi (4140 bar)
Includes Check Valves, Filters & Couplings

Principle of Operation:

Parker Autoclave Engineers High Pressure connection is a refinement of the original cone & thread joint which has been the standard connection in high pressure technology since its development by an agency of the US Government over 90 years ago. This design set precedence of quality and reliability found in all Parker Autoclave Engineers products to this day.

The pressure handling capabilities of this connection design have been applied successfully to control pressures in excess of 150,000 psi. All-metal sealing and working temperatures from -423° to 1200°F (-252° to 650°C), along with many different material options make this connection one of the most versatile ever. Fittings and tubing found in this section are designed using ASME B31.3 Chapter IX standards to be compatible with all of our High Pressure Valve and Fitting configurations.

High Pressure Fittings and Tubing Features:

- Utilize "F" Style High Pressure Coned-and-Threaded connections (see Tools & Installation for port dimensions)
- Available sizes are 1/4, 3/8, 9/16, and 1 inch nominal outside diameter tubing
- Standard Fitting Material is UNS S31600 with Tubing manufactured using UNS S31600/S31603, 316/316L stainless steel material, cold worked to Parker Autoclave proprietary standards. UNS S30400/S30403, 304 SS tubing is available
- Operating Temperatures from -423°F to 1200°F (-252° to 650°C)
- Anti-vibration connection components available, see pages 15 & 16
- High pressure, High cycle Autofrettagged tubing available along with many material options.
- Fitting and Tubing options for 100,000 and 150,000 psi applications available, see Ultra High Fitting brochure

All Parker Autoclave Engineers fittings are marked with manufacturers name, part number, material, heat code and maximum pressure for complete traceability.

ENGINEERING YOUR SUCCESS.

Fittings

High Pressure Fittings - Pressures to 60,000 psi (4140 bar)

Parker Autoclave Engineers High Pressure Cone & Thread Fittings, Couplings, Filters and Valves utilize the F Style Cone & Thread Connection Detail (see Tools & Installation brochure for dimensions). These fittings are compatible with Series 30SC, 43SC, 30VM, 40VM, and 60VM valves and Parker Autoclave Engineers high pressure tubing.

For instructions on how to make this High Pressure Cone & Thread connection see the step by step instructions on page 7.

High Pressure Connection Components:

All valves and fittings are supplied complete with appropriate gland and tubing collar. To order these components separately, use part numbers listed below. When using plug, collar is not required. Tubing Pressure Caps can be found in Adapter brochure.

Connection Type	Gland	Collar	Plug	Connection Components (Industry Standard)
			 Socket Head Flush Plug version, add "-F" suffix	
F250C (1/4 HP) F375C (3/8 HP) F562C (9/16 HP) F562C40 (9/16 HP)	AGL40 AGL60 AGL90 AGL90	ACL40 ACL60 ACL90 ACL90	AP40 AP60 AP90 AP90	For use in all Parker Autoclave Engineers High Pressure Cone & Thread Fittings, Adapters and Valves up to 60,000 psi

F1000C43 (1" HP)	CGLX160	CCLX160	43CP160	1" Medium Pressure collar and gland design is suitable for use in all Parker Autoclave Engineers 1" High Pressure Cone & Thread Fittings, Adapters, and Valves up to 43,000 psi maximum

Notes:

To ensure proper fit use Parker Autoclave Engineers tubing.

For gland nut hex sizes and torque values, see "Tools and Installation" brochure.

All Cone and Thread ports MUST utilize weep holes for safety. When weep hole is not available, we offer a gland nut with a "Slotted Male Thread" that provides this safety feature without the need for the separate port. Use suffix "-SMT" with Gland part number when needed.

All PAE High Pressure Fittings and Tubing can be made with materials suitable for NACE/ISO 15156 requirements. As per NACE and ISO-15156, it is contingent on the end user to select this material. As this compatibility limits the use of "cold worked" materials, most of the choices come with significant pressure reductions. Please consult our Technical Brochure where we identify the more popular annealed materials along with the pressure reduction. Our Sour Oil and Gas brochure has a more complete description of the available options for pressures up to 30,000 psi.

Special Materials: Special Material Fittings are normally supplied with CW 316 SS Glands and Collars as these parts do not touch flowing (wetted) media. To match the same material as selected for body, use either "-SOG" (Sour Oil or Gas - NACE) or "-AP" (All Parts) suffix. Special material glands and adapter bodies are normally supplied with four flats (square) in place of standard hex. Include option suffix "-H" if hex is required.

If vibration is inherent in the application, please see information on Antivibration Gland Fittings on pages 15 and 16 of this brochure.

NACE/ISO 15156 Compatibility

All PAE High Pressure Fittings and Tubing can be made with materials suitable for NACE/ISO 15156 requirements. As per NACE and ISO-15156, it is contingent on the end user to select suitable material for service. As this compatibility limits the use of "cold worked" materials, most material choices come with significant pressure reductions. Please consult our Technical Brochure where we identify the more popular annealed materials along with the pressure reduction.

NACE Suffix and Special Materials Options:

"-SOG" (Sour Oil & Gas) suffix converts all pressure containing parts from cold worked 316SS to annealed condition material, requires hardness check, and NACE certificate is generated for each part. Pressure reductions of 50% (30,000 psi) are possible.

"-AP" (All Parts) suffix converts all fitting and most valve materials to the selected material. Normally, collar and gland remain as cold worked 316 SS as they are not "wetted" parts. This option does not get the Hardness verification and no NACE certificate is generated.

Contact factory for other pressure/material options.

90° Elbow: 45° Elbows are available - replace 00 with 45 (ie; CL6645 or 43CL1645)

Catalog Number	Connection Type	Outside Diameter Tube	Pressure Rating psi (bar)*	Minimum Opening	Dimensions - inches (mm)						Block Thickness

Straight Coupling / Union Coupling (see assembly drawing below)

Catalog Number	Connection Type	Outside Diameter Tube	Pressure Rating psi (bar)*	Minimum Opening	Dimensions - inches (mm)				Coupling Type
					A	B	C	D Typical	
60F4433 60UF4433	F250C	1/4 (6.35)	60,000 (4140)	.094 (2.39)	0.75 (19.05)	1.38 (35.05)	0.50 (12.70)	0.63 (16)	Straight Union
60F6633 60UF6633	F375C	3/8 (9.53)	60,000 (4140)	.125 (3.18)	1.00 (25.40)	1.75 (44.45)	0.53 (13.46)	0.81 (21)	Straight Union
60F9933 60UF9933	F562C	9/16 (7.94)	60,000 (4140)	.188 (4.78)	1.38 (35.05)	2.19 (55.63)	0.81 (20.57)	1.19 (31)	Straight Union
40F9933 40UF9933	F562C40	9/16 (7.94)	40,000 (2760)	.250 (6.35)	1.38 (35.05)	2.19 (55.63)	0.81 (20.57)	1.19 (31)	Straight Union
43F16 43UF16	F1000C43	1 (25.40)	43,000 (2965)	.438 (11.13)	1.75 (44.45)	3.50 (88.90)	0.72 (18.29)	1.38 (35)	Straight Union

Note: Union Couplings are designed with a removable seat insert allowing disassembly and tubing removal without the necessity of loosening other items in a line.

*Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower. All dimensions for reference only and subject to change. For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Union Coupling Assembly

Assembled Union Coupling

Union vs. Straight Coupling Comparison

In much the same as with a traditional Pipe Union, the PAE Union Coupling is used to easily disassemble tubing runs when valves or fittings need to be replaced after original installation. The Body and Insert are two different pieces in the same assembly. The body can slide down tubing leaving only the insert and the tubing tips engaged. Then with only minimal tube shift, the insert drops out allowing the tubing to be removed avoiding the need to disassemble multiple tubing sections from closest elbow.

Note: When Special Materials are requested, the only material that is changed is the Insert (wetted). If “All Parts” are to be requested, include suffix “-AP” or “-SOG” if for NACE/ISO 15156.

Tubing

High Pressure Tubing - Pressures to 60,000 psi (4140 bar)

Parker Autoclave Engineers offers a complete selection of austenitic cold drawn stainless steel tubing designed to match the performance standards of Parker Autoclave valves and fittings. Parker Autoclave high pressure tubing is manufactured of 316/316L (UNS S31600/S31603) and 304/304L (UNS S30400/S30403) specifically for high pressure applications requiring both strength and corrosion resistance. The tubing is furnished in random lengths between 20 feet (6 meters) and 26.5 feet (8.0 meters). The average is 24 feet (7.3 meters). High pressure tubing is available in five sizes and a variety of materials. Special longer lengths are available. Consult factory.

Inspection and Testing:

Parker Autoclave Engineer's high pressure tubing is inspected to assure freedom from seams, laps, fissures or other flaws, as well as carburization or intergranular carbide precipitation. The outside and inside diameters of the tubing are controlled within close tolerances including runout. Sample pieces of tubing for each lot are tested to confirm mechanical properties. Hydrostatic testing is also performed on a statistical basis and is conducted at the working pressure of the tube. Parker Autoclave will perform 100% hydrostatic testing up to 1.5 times working pressure at additional cost if desired.

Special Material:

In addition to the most commonly requested materials we have other material options outlined in our Technical Brochure such as 316 SS (annealed), 6 Moly, and Inconel. These options include materials suitable for use in NACE/ISO 15156 corrosive or stress cracking applications.

Tubing Tolerance:

Nominal Tubing Size inches (mm)	Tolerance/Outside Diameter inches (mm)
1/4 (6.35)	.248/.243 (6.30/6.17)
3/8 (9.53)	.370/.365 (9.40/9.27)
9/16 (14.29)	.557/.552 (14.15/14.02)
1 (25.40)	.995/.990 (25.27/25.14)

Note:

Standard Tubing is manufactured in accordance with ASME B31.3 Chapter IX standards using UNS S31600/S31603, 316/316L Stainless Steel material, cold worked to Parker Autoclave proprietary standards.

High Pressure Tubing outside diameter dimensions do not meet standard commercial tubing tolerances. Tubing outside dimensions are specifically chosen to meet tube threading die requirements.

Parker Autoclave Engineers components and tubing are designed as a "complete system" for safety and our fittings will not be compatible with standard "commercial" tubing.

Autofrettage for High Pressure High Cycle (HPHC) applications:

If high cycle fatigue life is a concern, Parker Autoclave Engineers can supply tubing which has been autofrettaged for improved fatigue resistance. For internally pressurized tubing, **autofrettage** is a method by which the inner wall of the tube is precompressed to reduce the tube operating bore stresses, thereby increasing cycle life and increasing the life span of the tubing. (every application is different and while life span increases of 40% have been reported, we cannot guarantee any specific increase in tubing life.)

High Pressure Tubing Details: 316/316L & 304/304L Stainless Steel (Cold Worked)

Catalog Number	Tube Material	Fits Connection Type	Tube Size inches (mm)			Flow Area in ² (mm ²)	Working Pressure psi (bar)*

Note:

- Autofrettagged tubing available (see Technical section: Pressure Cycling for explanation of "Autofrettagage".
- For Ultra-High Pressure, High Cycle (HPHC) tubing above 60,000 psi, see Parker Autoclave Engineers Ultra High Pressure Fittings and Tubing Brochure.
- See Technical Section for Temperature Ratings over 600°F (315°C).

*Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower. All dimensions for reference only and subject to change. For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

High Pressure Connection: Step by Step Assembly Instructions

Step 1	Step 2	Step 3												
														
<p>Insert Coned and Threaded Nipple through Gland (Typical Tee Fitting Assembly consisting of Fitting Body, Collar, Gland, and Coned and Threaded Nipple or Tube End.)</p>	<p>Thread Collar turning (Reverse Threaded to prevent rotation during torque process) onto Coned and Threaded Nipple end.</p>	<p>For proper Collar placement, thread Collar onto Nipple leaving 1 to 2 full threads exposed on Fitting side of Collar. Lubricate Gland Threads with anti-seize compound and tube tip with process compatible lubricant (do not use metal-flake type)</p>												
Step 4	Step 5	High Pressure Gland Torque												
		<p>For 316/316L SS, 2507 Super Duplex Tubing & Adapters</p> <table border="1"> <thead> <tr> <th>Fitting Size</th> <th>Required Torque ft-lb (N.m)</th> </tr> </thead> <tbody> <tr> <td>1/4" HP</td> <td>25 (34)</td> </tr> <tr> <td>3/8" HP</td> <td>50 (68)</td> </tr> <tr> <td>9/16" HP</td> <td>75 (102)</td> </tr> <tr> <td>9/16" HP-40Ksi</td> <td>60 (82)</td> </tr> <tr> <td>1" HP-43Ksi</td> <td>180 (244)</td> </tr> </tbody> </table> <p>For torques and optional materials (lower pressures), see Tools and Installation Catalog 02-0149SE</p> <p>*1" Connection will have collar in front of gland nut but assembles with same process.</p>	Fitting Size	Required Torque ft-lb (N.m)	1/4" HP	25 (34)	3/8" HP	50 (68)	9/16" HP	75 (102)	9/16" HP-40Ksi	60 (82)	1" HP-43Ksi	180 (244)
Fitting Size	Required Torque ft-lb (N.m)													
1/4" HP	25 (34)													
3/8" HP	50 (68)													
9/16" HP	75 (102)													
9/16" HP-40Ksi	60 (82)													
1" HP-43Ksi	180 (244)													
<p>Insert Tube/Gland assembly into Fitting body, turning clockwise approximately 4-5 threads (if unable to turn full distance by hand, look for misalignment issues with tubing and correct for proper seal).</p>	<p>Use Torque Wrench to properly set (see chart in next frame) Cone & Thread Connections. (Available with wrench adapters in Tools and Installation brochure)</p>													

Coned-and-Threaded Nipples

High Pressure - Pressures to 60,000 psi (4140 bar)

For rapid system make-up, Parker Autoclave Engineers supplies pre-cut, coned-and-threaded nipples in various sizes and lengths for Parker Autoclave Engineers medium pressure valves and fittings.

Special Lengths:

In addition to the standard lengths listed in the table below, nipples are available in any custom length. Consult factory.

Material:**

Catalog numbers in table refer to Type UNS S31600/S31603, CW 316/316L Stainless steel. Optional materials available. Consult factory.

Nipple Details:

Catalog Number (316 Stainless Steel)

Notes:

See High Pressure Tubing section of this brochure or Technical Brochure for pressure ratings at various temperatures.

* Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower.

** Type 304 Stainless Steel nipples available.

*** 40CN99XX nipples use the larger bore (0.250") 9/16" tubing rated at 40,000 psi with standard HP collars and glands.

All dimensions for reference only and subject to change. For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Check Valves

High Pressure - Pressures to 60,000 psi (4140 bar)

CKO Series O-Ring Check Valve

Ordering part numbers can be found on page 12

Provide unidirectional flow and tight shut-off for liquids and gases with high reliability. When differential drops below cracking pressure*, valve shuts off. **(Not for use as relief valve.)**

Cracking Pressure*: 20 psi (1.38 bar) \pm 30%. Springs for higher cracking pressures up to 100 psi available on special order for O-ring style check valves only.

Temperature Range/O-ring Options:

Viton (FKM) O-ring (std.): 0° to 400°F (-18° to 204°C)

Buna-N O-ring (-**BO** suffix): -20° to 250°F (-29° to 121°C)

FFKM O-ring (-**KO** suffix): 30° to 500°F *(-18° to 260°C)

PTFE O-ring (-**TO** suffix): -100° to 400°F (-73° to 204°C)

PTFE O-ring with Low Temp Spring (-**LTTO** suffix): to -423°F (-252°C)

Installation:

Vertical or Horizontal as required. Flow Direction arrow on valve body.

CAUTION: While testing has shown O-Rings to provide satisfactory service life, both cyclic and shelf life may vary widely with differing service conditions, properties of reactants, pressure and temperature cycling and age of the O-ring.

FREQUENT INSPECTIONS SHOULD BE MADE to detect any deterioration, and O-rings replaced as required.

NOTE: For optional material see Technical Brochure. Special material check valves are normally supplied with four flats in place of standard hex.

Material of Construction:

Item #	Description	Material
1	Check Valve Body	316 SS
2	Cover	316 SS
3	Poppet	316 SS
4	Gland Nut	316 SS
5	Spring	302 SS
6	O-Ring	90 Duro FKM

Typical spare parts found in Repair Kits

Basic O-ring Check Valve Repair Kits:

Check Valves are easily repaired. Add "R" to front of valve catalog number for proper repair kit (example: RCKO9900) See "Cover Torque" on page 12 for re-assembly. Include any catalog number suffix marked on original part when ordering repair kit.

Check Valves

High Pressure - Pressures to 60,000 psi (4140 bar)

CB Series Ball Check Valve

Ordering part numbers can be found on page 12

Prevent reverse flow **where leak-tight shut-off is not mandatory**. When differential drops below cracking pressure, valve closes. With all-metal components, valve can be used up to 1200°F (649°C). See Technical Information section for connection temperature limitations. **(Not for use as relief valve.)**

Ball and poppet are an integral design to assure positive, in-line seating without “chatter”. Poppet is designed essentially for axial flow with minimum pressure drop.

Cracking Pressure*: 20 psi (1.38 bar) +/- 30% No optional cracking pressures available.

Temperature Range: With All-Metal components, valve can be used to 800°F (425°C). Minimum standard operating temperature is -110°F (-79°C). For Low Temperature operation to -423°F (-252°C) use suffix “-LT” (Low Temp Spring)

Installation:

Vertical or Horizontal as required. Flow Direction arrow on valve body.

NOTE: For optional material see Technical Brochure. Special material check valves are normally supplied with four flats in place of standard hex.

Material of Construction:

Item #	Description	Material
1	Gland	316 SS
2	Gland Nut	316 SS
3	Cover	316 SS
4	Poppet	316 SS
5	Spring	302 SS
6	Check Valve Body	316 SS

Typical spare parts found in Repair Kits

Basic Ball Check Valve Repair Kits:

Check Valves are easily repaired. Add “R” to front of valve catalog number for proper repair kit (example: RCB9901) See “Cover Torque” on page 12 for re-assembly.

Include any catalog number suffix marked on original part when ordering repair kit.

Excess Flow Valves

High Pressure - Pressures to 60,000 psi (4140 bar)

Protects pressure gauges and pressure instrumentation from sudden surges in flow or venting in the event of line failure.

Vertical Installation: Since this type of check valve employs a non-spring loaded ball, valve **MUST** be installed in **VERTICAL** position with arrow on valve body pointing UP. (cover gland up).

Resetting Valve: Equalize the pressure across the ball. The ball will drop and reset automatically. Note: when in checked position, a small flow is permitted through the valve.

Temperature Range: With All-Metal components, Excess Flow Valve can be used from -423° to 800°F (-252° to 425°C).

NOTE: For optional material see Technical Brochure. Special material check valves are normally supplied with four flats in place of standard hex.

CK Series Ball Type Excess Flow Valves (Surge Check)

Ordering part numbers can be found on page 12

Material of Construction:

Item #	Description	Material
1	Gland Nut	316 SS
2	Cover	316 SS
3	Ball, 1/2" Diameter	302 SS
4	Check Valve Body	316 SS

Typical spare parts found in Repair Kits

Excess Flow Valve Repair Kits

Excess Flow Valves are easily repaired. Add "R" to front of valve catalog number for proper repair kit (example: RCK9902) See "Cover Torque" on page 12 for re-assembly. Include any catalog number suffix marked on original part when ordering repair kit.

Note:

† Distance across flats

** Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower. All dimensions for reference only and subject to change. For prompt service, Parker Autoclave stocks select products. Consult your local representative.

Check and Excess Flow Valve Dimensions

Line Filters

High Pressure - Pressures to 60,000 psi (4137 bar)

**CFL Series
Dual Disc Line Filters**

**CF Series
Cup Type Line Filters**

Dual-Disc Line Filters are utilized in numerous industrial, chemical processing, aerospace, nuclear and other applications. With the dual-disc design, large contaminant particles are trapped by the upstream filter element before they can reach and clog the smaller micron-size downstream element. Filter elements can be easily replaced.

Materials: Body, Cover, Gland Nut: CW 316 Stainless Steel.

Filter Element: 316L Stainless Steel, Sintered Disc Type. Downstream//upstream micron size 35/65 is standard. 5/10 or 10/35 also available when specified. Other element combinations available on special order.

High Flow Cup-Type Line Filters are recommended in high pressure systems requiring both high flow rates and maximum filter surface area. Widely used in the industrial and chemical processing fields, the cup design offers as much as six times the effective filter area as compared to disc-type units. In addition, the filter elements can be quickly and easily replaced.

Materials: Body, Cover, Gland Nut: CW 316 Stainless Steel.

Filter Element: 316L Stainless Steel, Sintered Cup Type. Standard elements available in choice of 5, 35 or 65 micron sizes. Note: Filter ratings are nominal.

Temperature Range: Both Models: Oxidizing Fluids: 750°F (400°C) maximum Non-Oxidizing Fluids: 900°F (480°C) -423°F (-252°C) minimum

Spare Parts: Filter Elements are only replaceable part with either filter type. See chart on page 14 for Filter Element part numbers.

NOTE 1: All filters furnished complete with connection components unless otherwise specified. All dimensions for reference only and subject to change. For optional materials, see Technical Section

NOTE 2: Parker Autoclave Engineers disc and cup type filters are designed to filter small amounts of process particles. It is recommended that all fluids are thoroughly cleaned prior to entering the higher pressure system.

NOTE 3: Special material filters may be supplied with four flats in place of standard hex.

NOTE 4: Pressure differential not to exceed 1,000 psi (69 bar) in a flowing condition. Filter Replacement is recommended.

NOTE 5: Larger micron size filter element is installed on the upstream (inlet) side.

Dual Disc Line Filters: High Pressure, 60,000 psi (4140 bar)

Anti-Vibration Collet Gland Assembly

Series KCGL High Pressure - Pressures to 60,000 psi (4140 bar)

Series KCGL
60,000 psi (4137 bar)

Note:

- 1) To order valve and fitting components with anti-vibration assemblies add -K to catalog numbers.
- 2) Special material assemblies are normally supplied with four flats in place of standard hex.
- 3) See Tools and Installation Catalog for Installation Instructions including Torque Specifications.

Series KCGL (sizes to 9/16" [14.29 mm])

For extreme conditions of vibration and/or shock in tubing systems, such as locating valve or fitting on an unsupported line near a compressor, Parker Autoclave Engineers coned-and-threaded connections are offered with the Anti-Vibration Collet Gland Assemblies. Completely interchangeable with standard Parker Autoclave Engineers high pressure connections, the Collet Gland Assemblies provide equally effective pressure handling capability.

In standard connection systems, the bending stresses on the threaded area of the tubing imposed by excessive vibration or movement may cause premature fatigue failure of the tubing at the back of the thread. By moving the stress concentration back to the unthreaded part of the tubing and providing a wedge-type gripping action, the Parker Autoclave Engineers anti-vibration collet gland assembly strengthens the entire structure. With stress concentration reduced and overall stress level maintained well below the endurance limit of the material, the result is extended vibrational fatigue life.

A less complex and more economical design than other vibration-resistant connections, the Collet Gland Assembly utilizes the same coned-and-threaded features of Parker Autoclave Engineers high pressure connections. In Series KCGL the gland nut is recessed to accommodate a tapered, slotted collet that grips the tubing at a point behind the threaded area of the tubing. The design provides a slight difference in angles between the collet and the corresponding taper of the gland nut. As the nut is tightened, it acts to wedge the tapered end of the collet into a gripping engagement with the tubing and, at the same time, forces the collar and tubing assembly into line contact with the connection seat.

Anti-Vibration Collet Gland Assembly Details:

Catalog Number	Part	Outside Diameter Tubing Size Inches (mm)	Dimensions: Inches (mm)		
			A	B	Hex
KCGL40-316	Complete Assembly	1/4 (6.35)	0.50 (12.70)	0.81 (20.58)	5/8 (16)
KCGL60-316	Complete Assembly	3/8 (9.53)	0.62 (15.75)	1.12 (28.45)	13/16 (21)
KCGL90-316	Complete Assembly	9/16 (14.29)	1.00 (25.40)	1.50 (38.10)	1-3/16 (30)

Series KCGL
60,000 psi (4140 bar)

Standard Parker Autoclave Engineers collar not included in Antivibration Gland assembly (chart) if AV Gland ordered separately.

All dimensions for reference only and subject to change.
For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Anti-Vibration Collet Gland Assembly

Series KCBGLX High Pressure - 1" Only to 43,000 psi (2965 bar)

Series KCBGLX (1" only)
Pressures to 43,000 psi (2965 bar)

Series KCBGLX: 1" High Pressure [compatible with F1000C43 connection]

The 1" High Pressure Fittings and Valves utilize the 1" Medium Pressure Gland and Collar to secure the tubing into the connection. As such the Antivibration Gland assembly has a slightly different design from the typical "High Pressure" connection and has the collar in front of the gland nut.

Series KCBGLX extends the gland nut to provide room for the tapered, slotted collet and collet nut. The design provides a slight difference in angles between the collet and the corresponding taper of the gland nut. As the nut is tightened, it acts to wedge the tapered end of the collet into a gripping engagement with the tubing.

Material

316 SS with bonded dry film molybdenum disulfide to help prevent galling. Additional thread lubricant not needed.

Note:

- 1) To order valve and fitting components with anti-vibration assemblies add **-K** to catalog numbers.
- 2) Special material assemblies are normally supplied with four flats in place of standard hex.
- 3) See Tools and Installation Catalog for Installation Instructions including Torque Specifications.

1" Anti-Vibration Collet Gland Assembly Details:

Catalog Number	Part	Outside Diameter Tubing Size Inches (mm)	Dimensions: Inches (mm)		
			A	B	Hex
KCBGLX160-316MC	Complete Assembly	1.0 (25.40)	1.69 (25.40)	2.38 (60.45)	1-1/2" (38)

Series KCBGLX
Pressures to 43,000 psi (2965 bar)

All dimensions for reference only and subject to change.
For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Standard Parker Autoclave Engineers collar not included in complete assembly if ordered separately.

Always use back-up wrench on collet body when tightening collet gland nut to prevent over-torquing connection.

Fittings and Tubing

Ultra High Pressure Cone & Thread

Pressures to 150,000 psi (10350 bar)
Includes Check Valves & Couplings

Principle of Operation:

Parker Autoclave Engineers High & Ultra High Pressure connections are a refinement of the original cone & thread joint which has been the standard connection in high pressure technology since its development by an agency of the US Government over 90 years ago. This design set precedence of quality and reliability found in all Parker Autoclave Engineers products to this day.

The pressure handling capabilities of this connection design have been applied successfully to control pressures up to 150,000 psi. All-metal sealing and working temperatures from 0° to 600°F (-18° to 315°C), along with a variety of different material options make this connection one of the most versatile ever. Fittings and tubing found in this section are designed using ASME B31.3 Chapter IX standards to be compatible with all of our Ultra High Pressure Valve and Fitting configurations.

Ultra High Pressure Fittings and Tubing Features:

- Utilize "C100 and C150" Style Ultra High Pressure Coned-and-Threaded connections (see Tools & Installation for port dimensions)
- Available sizes are 1/4, 3/8, 5/16, and 9/16 inch nominal outside diameter tubing
- Fittings manufactured using UNS S31600, 316 Stainless Steel or UNS S15500 15-5PH (as required) stainless steel material, cold worked to Parker Autoclave proprietary standards.
- Operating Temperatures from 0°F to 600°F (-18° to 315°C)
- Tubing Material for 100,000 psi service is HP160 SS (Autofrettage is standard), 150,000 psi Tubing material is UNS S31600/S31603 Cold Worked 316/316L Stainless Steel
- Anti-vibration connection components available, see pages 11 & 12

All Parker Autoclave Engineers fittings are marked with manufacturers name, part number, material, heat code and maximum pressure for complete traceability.

* Single-sided on Round or Hex parts

ENGINEERING YOUR SUCCESS.

Fittings

Ultra High Pressure Tubing - Pressures to 150,000 psi (10350 bar)

Parker Autoclave Engineers Ultra High Pressure Cone & Thread Fittings, Couplings, Check Valves and 100VM and 150V Valves utilize the F Style (with C100 or C150 designations) Cone & Thread Connection Detail (see Tools & Installation brochure for dimensions).

Ultra High Pressure Connection Components:

All valves and fittings are supplied complete with appropriate gland and tubing collar. To order these components separately, use part numbers listed below. When using plug, collar is not required. Tubing Pressure Caps can be found in Adapter brochure.

Connection Type	Gland	Collar	Plug	Connection Components (industry Standard)
				
F250C100 (1/4" 100K) F375C100 (3/8" 100K) F312C150 (5/16" 150K)	100CGL40 100CGL60 CGL50	100CCL40 100CCL60 CCL50	100CP40 100CP60 CP50	The F250C100 & F375C100 connections are for use in valves and fittings up to 100,000 psi (6900 bar). The F312C150 5/16" connection is used in both 100,000 psi and 150,000 psi (10350 bar) fittings. This design has the collar out in front of the gland nut similar to Medium Pressure Fittings but with longer threads.
				
F562C100 (9/16" 100K)	AGL90-155	ACL90-155	AP90-155	The F562C100 Connection is similar to the 9/16" High Pressure where the collar is surrounded by the gland nut but all materials used need to be made with 15-5PH material or similar strength.

Notes:

To ensure proper fit use Parker Autoclave Engineers tubing.
For gland nut hex sizes and torque values, see "Tools and Installation" brochure.
All Cone and Thread ports MUST utilize weep holes for safety.

Note: Union Couplings are designed with a removable seat insert allowing disassembly and tubing removal without the necessity of loosening other items in a line.

*Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower. All dimensions for reference only and subject to change. For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Union Coupling Assembly

Assembled Union Coupling

Union vs. Straight Coupling Comparison

In much the same as with a traditional Pipe Union, the PAE Union Coupling is used to easily disassemble tubing runs when valves or fittings need to be replaced after original installation. The Body and Insert are two different pieces in the same assembly. The body can slide down tubing leaving only the insert and the tubing tips engaged. Then with only minimal tube shift, the insert drops out allowing the tubing to be removed avoiding the need to disassemble multiple tubing sections from closest elbow.

Note: When Special Materials are requested, the only material that is changed is the Insert (wetted).

Tubing

Ultra High Pressure Tubing - Pressures to 150,000 psi (10350 bar)

Parker Autoclave Engineers offers a selection of austenitic cold drawn stainless steel tubing designed to match the performance standards of Parker Autoclave valves and fittings. Parker Autoclave ultra high pressure tubing is manufactured of 316/316L (UNS S31600/S31603) or HP160 (100Ksi only) specifically for high pressure applications requiring both strength and corrosion resistance. The tubing is furnished in random lengths between 20 feet (6 meters) and 26.5 feet (8.0 meters). The average is 24 feet (7.3 meters). Our HP160 tubing was designed by Parker Autoclave Engineers specifically for High Cyclic use such as Waterjet cutting machines. Special longer lengths are available. Consult factory.

Inspection and Testing:

Parker Autoclave Engineer's ultra high pressure tubing is inspected to assure freedom from seams, laps, fissures or other flaws, as well as carburization or intergranular carbide precipitation. The outside and inside diameters of the tubing are controlled within close tolerances including runout. Sample pieces of tubing for each lot are tested to confirm mechanical properties. Hydrostatic testing is also performed on a statistical basis and is conducted at the working pressure of the tube. Parker Autoclave will perform 100% hydrostatic testing up to 1.5 times working pressure at additional cost if desired.

Special Material:

In addition to the type 316/316L and HP160 High Cycle tubing listed in this section, Parker Autoclave Engineers has a limited stock of hard-to-obtain non-standard lengths of exotic material tubing.

Temperature Capability:

Ultra High Pressure Tubing is capable of temperatures from -0° to 600°F. Please reference Technical Brochure for material, temperature, and bending data. Consult Factory for assistance with tubing applications below 0°F or above 600°F (-18° or 315°C)

Tubing Tolerance:

Nominal Tubing Size inches (mm)	Tolerance/Outside Diameter inches (mm)
1/4 (6.35)	.248/.243 (6.30/6.17)
3/8 (9.53)	.370/.365 (9.40/9.27)
9/16 (14.29)	.557/.552 (14.15/14.02)
5/16 (7.94)	.310/.306 (7.87/7.77)

Note:

Standard Tubing is manufactured in accordance with ASME B31.3 Chapter IX standards using UNS S31600/S31603, 316/316L or HP160 Stainless material, cold worked to Parker Autoclave proprietary standards.

Tubing outside diameter dimensions do not meet standard commercial tubing tolerances. Tubing outside dimensions are specifically chosen to meet tube threading die requirements.

Parker Autoclave Engineers components and tubing are designed as a "complete system" for safety and our fittings will not be compatible with standard "commercial" tubing.

Autofrettage for High Pressure High Cycle (HPHC) applications:

If high cycle fatigue life is a concern, Parker Autoclave Engineers can supply tubing which has been autofrettaged for improved fatigue resistance. For internally pressurized tubing, **autofrettage** is a method by which the inner wall of the tube is precompressed to reduce the tube operating bore stresses, thereby increasing cycle life and increasing the life span of the tubing. (every application is different and while life span increases of 40% have been reported, we cannot guarantee any specific increase in tubing life.)

Ultra High Pressure Tubing Details:

Catalog Number	Tube Material	Fits Connection Type	Tube Size inches (mm)			Flow Area in ² (mm ²)	Working Pressure psi (bar)*

Coned-and-Threaded Nipples

Ultra High Pressure - Pressures to 150,000 psi (10350 bar)

For rapid system make-up, Parker Autoclave Engineers supplies pre-cut, coned-and-threaded nipples in various sizes and lengths for Parker Autoclave Engineers medium pressure valves and fittings.

Special Lengths:

In addition to the standard lengths listed in the table below, nipples are available in any custom length. Consult factory.

Material:**

Catalog numbers in table with "-HP" suffix refer to HP160 material (100,000 psi max) and with "-316" suffix refer to 316/316L Stainless Steel UNS S31600/S31603 cold worked material.

Nipple Details:

Notes:

See High Pressure Tubing section of this brochure or Technical Brochure for pressure ratings at various temperatures.

* Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower.

All dimensions for reference only and subject to change. For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Check Valves

Ultra High Pressure - Pressures to 150,000 psi (10350 bar)

CB Series Ball Check Valve

Ordering part numbers can be found on page 11

Prevent reverse flow **where leak-tight shut-off is not mandatory**. When differential drops below cracking pressure, valve closes. With all-metal components, valve can be used up to 600°F (315°C). See Technical Information section for connection temperature limitations. **(Not for use as relief valve.)**

Ball and poppet assure positive, in-line seating without “chatter”. Poppet is designed essentially for axial flow with minimum pressure drop.

Cracking Pressure*: 20 psi (1.38 bar) +/- 30% No optional cracking pressures available.

Temperature Range: With All-Metal components, valve can be used to 600°F (315°C). Minimum standard operating temperature is 0°F (-18°C).

Installation:

Vertical or Horizontal as required. Flow Direction arrow on valve body.

NOTE: For optional material see Technical Brochure. Special material check valves are normally supplied with four flats in place of standard hex.

Material of Construction:

Item #	Description	Material
1	Gland	316 SS
2	Gland Nut	15-5PH
3	Cover	15-5PH
4	Cone Ring	316 SS
5	Ball	Tungsten Carbide
6	Spring	302 SS
7	Check Valve Body	15-5PH

Typical spare parts found in Repair Kits

Basic Ball Check Valve Repair Kits:

Check Valves are easily repaired. Add “R” to front of valve catalog number for proper repair kit (example: RCB9901) See “Cover Torque” on page 12 for re-assembly.

Include any catalog number suffix marked on original part when ordering repair kit.

Check Valves

Anti-Vibration Collet Gland Assembly

Series KCBGL Ultra High Pressure - Pressure to 150,000 psi (10342 bar)

Series KCBGL

Pressures to 150,000 psi (10350 bar)

Series KCBGL: Sizes to 1/4" (6.35 mm), 5/16" (7.94 mm), 3/8" (9.53 mm)

For extreme conditions of vibration and/or shock in tubing systems, such as locating a valve or fitting on an unsupported line near a compressor, Autoclave coned-and-threaded connections are offered with the Anti-Vibration Collet Gland Assemblies. A less complex and more economical design than other vibration-resistant connections, the collet gland assembly utilizes the same coned-and-threaded features of Autoclave high pressure connections.

Series KCBGL extends the gland nut to provide room for the tapered, slotted collet and collet nut. The design provides a slight difference in angles between the collet and the corresponding taper of the gland nut. As the nut is tightened, it acts to wedge the tapered end of the collet into a gripping engagement with the tubing.

Material

316 SS with bonded dry film molybdenum disulfide to help prevent galling. Additional thread lubricant not needed.

Note:

- 1) To order valve and fitting components with anti-vibration assemblies add **-K** to catalog numbers.
- 2) Special material assemblies are normally supplied with four flats in place of standard hex.
- 3) See Tools and Installation Catalog for Installation Instructions including Torque Specifications.

Anti-Vibration Collet Gland Assembly Details:

Catalog Number	Part	Outside Diameter Tubing Size Inches (mm)	Dimensions: Inches (mm)		
			A	B	Hex
KCBGL40-316MC†	Complete Assembly	.250 (6.35)	1.06 (26.92)	1.65 (41.91)	5/8"
KCBGL50-316MC†	Complete Assembly	.312 (7.94)	1.38 (34.92)	1.88 (47.62)	3/4"
KCBGL60-316MC†	Complete Assembly	.375 (9.53)	1.39 (35.30)	1.84 (46.73)	13/16"

Note: KCBGL anti-vibes are not for use with 9/16" 100,000 psi fittings and valves

All dimensions for reference only and subject to change.
For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Series KCBGL
Pressures to 150,000 psi (10350 bar)

Standard Parker Autoclave Engineers collar not included in complete assembly if ordered separately.

Anti-Vibration Collet Gland Assembly

Series KCGL Ultra High Pressure - Pressures to 100,000 psi (6895 bar)

Series KCGL
100,000 psi (6900 bar)

Note:

- 1) To order valve and fitting components with anti-vibration assemblies add **-K** to catalog numbers.
- 2) Special material assemblies are normally supplied with four flats in place of standard hex.
- 3) See Tools and Installation Catalog for Installation Instructions including Torque Specifications.

Series KCGL (9/16")

For extreme conditions of vibration and/or shock in tubing systems, such as locating valve or fitting on an unsupported line near a compressor, Parker Autoclave Engineers coned-and-threaded connections are offered with the Anti-Vibration Collet Gland Assemblies. Completely interchangeable with standard Parker Autoclave Engineers high pressure connections, the Collet Gland Assemblies provide equally effective pressure handling capability.

In standard connection systems, the bending stresses on the threaded area of the tubing imposed by excessive vibration or movement may cause premature fatigue failure of the tubing at the back of the thread. By moving the stress concentration back to the unthreaded part of the tubing and providing a wedge-type gripping action, the Parker Autoclave Engineers anti-vibration collet gland assembly strengthens the entire structure. With stress concentration reduced and overall stress level maintained well below the endurance limit of the material, the result is extended vibrational fatigue life.

A less complex and more economical design than other vibration-resistant connections, the Collet Gland Assembly utilizes the same coned-and-threaded features of Parker Autoclave Engineers high pressure connections. In Series KCGL the gland nut is recessed to accommodate a tapered, slotted collet that grips the tubing at a point behind the threaded area of the tubing. The design provides a slight difference in angles between the collet and the corresponding taper of the gland nut. As the nut is tightened, it acts to wedge the tapered end of the collet into a gripping engagement with the tubing and, at the same time, forces the collar and tubing assembly into line contact with the connection seat.

Anti-Vibration Collet Gland Assembly Details:

Catalog Number	Part	Outside Diameter Tubing Size Inches (mm)	Dimensions: Inches (mm)		
			A	B	Hex
KCGL90-155	Complete Assembly	9/16 (14.29)	1.00 (25.40)	1.50 (38.10)	1-3/16 (30)

Note: KCGL Antivibe Gland Assemblies are not for use with 5/16" 150,000 psi or 1/4", 3/8" 100,000 psi fittings or valve. All dimensions for reference only and subject to change. For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Series KCGL
100,000 psi (6895 bar)

Standard Parker Autoclave Engineers collar not included in Antivibration Gland assembly (chart) if AV Gland ordered separately.

Always use back-up wrench on collet body when tightening collet nut to prevent over-torquing connection.

Fittings and Nipples

Instrument NPT Pipe Fittings 15,000 psi (1034 bar)

Includes Reducers, Couplings & Check Valves

Principle of Operation:

Parker Autoclave Engineers use high quality UNS S31600/S31603 316/316L material cold worked to our stringent specifications that enable certification of NPT style Instrument Pipe Fittings to a maximum working pressure of 15,000 psi (1050 bar). It's the strength of the material that allows this superior pressure rating and care should be taken to only use with other similar fittings made to the same specification.

Pipe Fitting & Nipple Features:

- 1/4", 3/8" and 1/2" NPT Sizes to 15,000 psi (1034 bar)
- 3/4" and 1" NPT Sizes to 10,000 psi (690 bar)
- Barstock Fittings and Pipe Nipples manufactured using UNS S31600/S31603, 316/316L stainless steel material cold worked to Parker Autoclave proprietary standards
- Operating Temperatures from -423°F (-252°C) to *400°F (204°C)
- Special materials available upon request or when NACE/ISO 15156 requirements demand. See Technical Catalog for more common material options. Note: 316 SS NACE Material (Annealed) reduces pressure rating for all sizes NPT to 10,000 psi MAWP.
- NPT threads made to ANPT (Aerospace) standards and based on requirements of ANSI B1.20.1
- All Parker Autoclave Engineers fittings are marked with manufacturers name, part number, material, heat code and maximum pressure for complete traceability

Fittings and Nipples found in this section are designed using ASME B31.3 Chapter IX High Pressure Piping Standards to be compatible with our 10P and 15P P Series Needle Valves and all of our various Ball Valve configurations. There is a Parker Instrumentation fitting for just about any requirement of fluids under extreme pressure and temperature conditions. For additional conversion adapters, please see our "Adapter" brochure found in our complete catalog or our website.

*Note: NPT Pipe Thread Connections:

NPT threads must be sealed using a high quality PTFE tape (3 wraps minimum) and/or thread sealant paste product suitable for process temperature. Refer to thread sealant manufacturer's instructions for application instructions. A good thread lubrication product (metal flake style) capable of process temperatures is also necessary to prevent thread galling. **Sealing performance** may vary based on many factors such as pressure, temperature, media, thread quality, thread material, proper engagement, and proper use of thread sealant. **End user** should limit the number of times an NPT fitting is assembled and disassembled as thread deformation during assembly will result in deteriorating seal quality over time.

ENGINEERING YOUR SUCCESS.

Pipe Fittings NPT Threaded - Pressures to 15,000 psi (1034 bar)

Parker Autoclave Engineers P Series Pipe Fittings are designed for liquid and gas applications. Sizes from 1/4" to 1" NPT are offered. For additional material options please consult our "Technical" brochure further in the catalog or on our website.

Note: When converting to NACE approved (-SOG) 316 SS Annealed material, pressure for ALL sizes (1/4" to 1") of NPT P Series Fittings & Nipples is 10,000 psi.

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Pipe Elbow

Catalog Number	Connection Type	Pressure Rating psi (bar)*	Orifice inches (mm)	Dimensions - inches (mm)				Block Thickness
				A	B	C	D	
PL4400	1/4" NPT	15,000 (1034)	.42 (10.67)	1.13 (28.58)	1.50 (38.10)	0.75 (19.05)	0.75 (19.05)	0.75 (19.05)

*Maximum pressure rating is based on the lowest rating of any component.
Actual working pressure may be determined by pipe pressure rating, if lower.
All dimensions for reference only and subject to change.

For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

For mounting hole option add suffix **PM** to catalog number. Consult factory for mounting hole dimensions.

Conversion Adapters can be found in our "Adapter" brochure found further in this catalog or on our website.

Pipe Elbow

Note: NPT (Pipe) Connections:

- NPT threads must be sealed using a high quality PTFE tape and/or paste product. Refer to thread sealant manufacturer's instructions on how to apply thread sealant.
- Sealing performance may vary based on many factors such as pressure, temperature, media, thread quality, thread material, proper thread engagement and proper use of thread sealant.
- Customer should limit the number of times an NPT fitting is assembled and disassembled because thread deformation during assembly will result in deteriorating seal quality over time. When using only PTFE tape, consider using thread lubrication to prevent galling of mating parts.

Note: Special material components are normally supplied with four flats in place of standard hex. *Maximum pressure rating is based on the lowest rating of any component.

Pipe Hex Nipples

NPT Threaded - Pressures to 15,000 psi (1034 bar)

For rapid system make-up, Parker Autoclave Engineers supplies pipe nipples in various sizes and lengths for pipe valves and fittings.

Special Lengths:

In addition to the standard lengths listed in the table below, nipples are available in custom lengths. Consult factory.

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Note:
NPT (Pipe) Connections: See Page 2

Conversion Adapters can be found in our "Adapter" brochure found further in this catalog or on our website.

Pipe Hex Reducer Nipples

Pipe O-Ring Check Valves

NPT Threaded - Pressures to 15,000 psi (1034 bar)

CPO Series O-Ring Check Valve

Provide unidirectional flow and tight shut-off for liquids and gases with high reliability. When differential drops below cracking pressure*, valve shuts off. **(Not for use as relief valve.)**

Cracking Pressure:

20 psi (1.38 bar) ±30%. Springs for higher cracking pressures up to 100 psi available on special order for O-ring style check valves only.

Temperature Ranges:

Viton (FKM) O-ring (std.): 0° to 400°F (-18° to 204°C)
 Buna-N O-ring (-BO suffix): -20° to 250°F (-29° to 121°C)
 FFKM O-ring (-KO suffix): 30° to 500°F *(-18° to 260°C)
 PTFE O-ring (-TO suffix): -100° to 400°F (-73° to 204°C)
 PTFE O-ring with Low Temp Spring (-LTTO suffix): to -423°F (-252°C)
 (See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Installation:

Vertical or Horizontal as required. Flow Direction arrow on valve body

CAUTION: While testing has shown O-Rings to provide satisfactory service life, both cyclic and shelf life may vary widely with differing service conditions, properties of reactants, pressure and temperature cycling and age of the O-Ring. FREQUENT INSPECTIONS SHOULD BE MADE to detect any deterioration, and O-rings replaced as required.

NOTE: For optional material see Technical Brochure. Special material check valves are normally supplied with four flats in place of standard hex.

Material of Construction:

Item #	Description	Material
1	Check Valve Body	316 SS
2	Gland Nut	316 SS
3	Poppet	316 SS
4	Spring	302 SS
5	O-Ring	90 Duro FKM

Typical spare parts found in Repair Kits

O-Ring Check Valve Repair Kits:

Check Valves are easily repaired. Add "R" to front of valve catalog number for proper repair kit (example: RCPO8800)

See "Cover Torque" on page 13 for re-assembly. Include any catalog number suffix marked on original part when ordering repair kit.

Do Not use check valve body (1) to tighten gland nut (2) into mating connection. Seal damage will occur.

Pipe Ball Check Valves

NPT Threaded - Pressures to 15,000 psi (1034 bar)

CPB Series Ball Check Valve

Prevent reverse flow **where leak-tight shut-off is not mandatory**. When differential drops below cracking pressure, valve closes. With all-metal components, valve can be used up to 800°F (425°C). See Technical Information section for connection temperature limitations. **(Not for use as relief valve.)**

Ball and poppet are an integrated, one-piece design to assure positive, in-line seating without “chatter”. Poppet is designed for axial flow with minimum pressure drop.

Cracking Pressure: 20 psi (1.38 bar) +/- 30% No optional cracking pressures available.

Temperature Range:

With All-Metal components, valve can be used to 800°F (425°C). Minimum standard operating temperature is -110°F (-79°C). For Low Temperature operation below 0° to -423°F (-18 to -252°C) use suffix “-LT” (Low Temp Spring)

(See “Technical Brochure” for Pressure/Temperature effect on temperatures above ambient.)

Installation:

Vertical or Horizontal as required. Flow Direction arrow on valve body

NOTE: For optional material see Technical Brochure. Special material check valves are normally supplied with four flats in place of standard hex.

Material of Construction:

Item #	Description	Material
1	Gland Nut	316 SS
2	Check Valve Body	316 SS
3	Poppet	316 SS
4	Spring	302 SS

Typical spare parts found in Repair Kits

O-Ring Check Valve Repair Kits:

Check Valves are easily repaired. Add “R” to front of valve catalog number for proper repair kit (example: RCPB8800) See “Cover Torque” on page 13 for re-assembly. Include any catalog number suffix marked on original part when ordering repair kit.

Do Not use check valve body (1) to tighten gland nut (2) into mating connection. Seal damage will occur.

+ Distance across flats

All dimensions for reference only and subject to change.
For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Note: NPT (Pipe) Connections:

- NPT threads must be sealed using a high quality PTFE tape and/or paste product. Refer to thread sealant manufacturer's instructions on how to apply thread sealant.

- Sealing performance may vary based on many factors such as pressure, temperature, media, thread quality, thread material, proper thread engagement and proper use of thread sealant.

- Customer should limit the number of times an NPT fitting is assembled and disassembled because thread deformation during assembly will result in deteriorating seal quality over time. When using only PTFE tape, consider using thread lubrication to prevent galling of mating parts.

Note: Special material components are normally supplied with four flats in place of standard hex.

*Maximum pressure rating is based on the lowest rating of any component.

Pipe Check Valves

adapters & couplings

Note: New Adapter and Coupling Section coming soon.

Adapters/Couplings

Parker Autoclave Engineers offers a complete line of standard adapters and couplings as well as special designs and materials.

Male/Female Adapters:

Male/female adapters are designed to join a female connection directly to another size and/or type of connection without the need for an additional coupling.

Couplings:

Couplings and reducer/adaptor couplings accommodate female-to-female joining of any combination of standard size tubing listed.

Male/Male Adapters:

Male-to-male one piece adapters are designed to join two female connections of any combination listed.

QSS Male/Female Adapters:

Male/female adapters are designed to join a female connection directly to another size and/or type of connection without the need for an additional coupling.

QSS Male/Male Adapters:

Male-to-male one piece adapters are designed to join two female connections of any combination listed.

Male/Male JIC Adapters:

Male-to-male one piece adapters have one end machined with a 37° flare design.

Male/Female JIC Adapters:

Male/female adapters are designed to join a female connection directly to another size and/or type of connection without the need for an additional coupling.

EZ-Union Adapters:

O-ring face seal adapter.

Flat face style o-ring seal permits easy installation or removal of components.

Butt-Weld/Header Coupling Adapters:

Female to male adapters have one end machined for butt-welding to pipe, tubes, and headers.

Bulkhead Adapters:

Male to female adapters designed for panel mounting.

SAE O-Ring Adapters:

Female to male SAE/MS straight thread o-ring seal adapter.

For specials or other adapters not listed contact your local Sales Representative.

Autoclave
Engineers 
www.autoclave.com

Adapters/Couplings - Male/Female Adapters

Male /female adapters are designed to adapt a female connection to another size and/or type of connection without the need for additional couplings. In selecting an adapter involving two different sized connections, the larger connection should be on the male end where it is possible to maximize the mechanical strength of the adapter.

To use this chart:

1. Locate MALE end in vertical column.
2. Locate desired FEMALE end of adapter across top of chart.
3. Catalog number of required adapter is located at intersection of columns.
4. For one piece adapter add-OP to suffix of part number

Other Adapters

Parker Autoclave Engineers supplies many other types of adapters on special order. These include socketweld to O.D. tube or nominal pipe size, extended or special designs.

Materials

All Parker Autoclave Engineers adapters are precision machined from cold-worked Type 316 stainless steel. Other materials available on special order.

Note: Special material couplings may be supplied with four flats in place of standard hex. Pipe connections are rated 400°F (204°C) to -423°F (-17.8°C).

Note: All Parker Autoclave Engineers adapters are supplied complete with appropriate glands, collars, tube nuts and sleeves unless specified without.

* The maximum pressure rating for an adapter is determined by the connection component with the LOWEST pressure rating; that is, the two end connections and the tubing or pipe used, whichever is LOWER.

CAUTION: See appropriate pressure section in reference to proper selection of tubing.

Parker Autoclave Engineers Male/Female Adapters are available in a "one-piece" design. They are identical to the two piece designs in length and can be ordered by adding the suffix - OP to the two piece adapter part numbers listed.

For prompt service, Parker Autoclave Engineers stocks select products. Consult factory.

Adapters/Couplings - Male/Female Adapters

Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower.

Note: For pressure rating see selection chart.

All Dimensions for reference only and subject to change.

For prompt service, Parker Autoclaves Engineers stocks select products. Consult factory.

Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower.

Note: For pressure rating see selection chart.

All Dimensions for reference only and subject to change.

NOTE: NPT (Pipe) connections

- NPT threads must be sealed using a high quality PTFE tape and/or PTFE paste product. Refer to thread sealant manufacturer's instructions on how to apply thread sealant.
- Sealing performance may vary based on many factors such as pressure, temperature, media, thread quality, thread material, proper thread engagement and proper use of thread sealant.
- Customer should limit the number of times an NPT fitting is assembled and disassembled because thread deformation during assembly will result in deteriorating seal quality over time. When using only PTFE tape, consider using thread lubrication to prevent galling of mating parts.

Adapters/Couplings - Couplings

The couplings shown here permit the joining of any combination of standard size tubing or tubing and standard pipe with female-to-female couplings. Other couplings available on special order.

Pressure Rating - The pressure rating of Parker Autoclave Engineers couplings is based on the lower rated connection used.

How to use the Ordering Chart below:

1. Locate "A" connection in the vertical column.
2. Locate the desired "B" connection across the top of the chart.
3. The catalog number of the required coupling is located at the intersection of the two columns.

Note: Special material couplings may be supplied with four flats in place of standard hex.

"A" Connection				"B" Connection

*Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower. **1/2 low pressure rated to 10,000 psi.

All dimensions for reference only and subject to change.

For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative. CAUTION: See appropriate pressure section in reference to proper selection of tubing.

For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

NOTE: NPT (Pipe) connections

- NPT threads must be sealed using a high quality PTFE tape and/or PTFE paste product. Refer to thread sealant manufacturer's instructions on how to apply thread sealant.
- Sealing performance may vary based on many factors such as pressure, temperature, media, thread quality, thread material, proper thread engagement and proper use of thread sealant.
- Customer should limit the number of times an NPT fitting is assembled and disassembled because thread deformation during assembly will result in deteriorating seal quality over time. When using only PTFE tape, consider using thread lubrication to prevent galling of mating parts.

Adapters/Couplings - Male/Male Adapters

Parker Autoclave Engineer's standard male-to-male one piece adapters are available in low, medium, and high pressure configurations. Standard male-to-male adapters are machined from cold worked stainless steel. Other materials are available upon request. Contact your local Sales Representative for optional information. The following tables list our standard adapters with dimensions.

Adapter End Configuration

'L' Low Pressure

'H' High Pressure

'RH' Reverse High Pressure

(Type "M" Male Adapter)

'M' Medium Pressure

'P' National Pipe Tapered

Ordering Procedure

Typical catalog number: **20 MA M6 H9**

L2 - 1/8" Low Pressure
L4 - 1/4" Low Pressure
L6 - 3/8" Low Pressure
L8 - 1/2" Low Pressure

M4 - 1/4" Medium Pressure
M6 - 3/8" Medium Pressure
M9 - 9/16" Medium Pressure
M12 - 3/4" Medium Pressure
M16 - 1" Medium Pressure

H4 - 1/4" High Pressure
H5 - 5/16" High Pressure
H6 - 3/8" High Pressure
H9 - 9/16" High Pressure

P4 - 1/4" NPT
P6 - 3/8" NPT
P8 - 1/2" NPT
P12 - 3/4" NPT
P16 - 1" NPT

***RH9** - 9/16" -18 Reverse High
RH12 - 3/4" -16 Reverse High
RH14 - 7/8" -14 Reverse High
RH16 - 1" -12 Reverse High
RH21 - 1-5/16" -12 Reverse High

Note: Special material one piece adapters may be supplied with four flats in place of standard hex.

*RH9 & RH14 - 40,000 psi (2758 bar), RH12 - 30,000 psi (2068 bar), RH16 - 26,000 psi (1793 bar), RH21 - 20,000 psi (1379 bar).

RH or "Reverse High Pressure" Connection is also known as "Type "M" Male Connection"

Low-Pressure to Low-Pressure Adapters

Catalog Number	Connection L/P	Connection L/P	Dimension inches (mm)	
			A Hex	B
15MAL2L2	W125	W125	0.50 (12.7)	1.38 (34.9)

10MAP16RH21	1	1-5/16"	1.38 (34.9)	2.68 (68.0)

Maximum pressure rating is based on the lowest rating of any component.
Actual working pressure may be determined by tubing pressure rating, if lower.

Note: For pressure rating see ordering procedure.

All Dimensions for reference only and are subject to change.

Male/Female Adapters - QSS Male/Female Adapters

Male /female adapters are designed to adapt a female connection to another size and/or type of connection without the need for additional couplings. In selecting an adapter involving two different sized connections, the larger connection should be on the male end where it is possible to maximize the mechanical strength of the adapter.

Materials

All Parker Autoclave Engineers adapters are precision machined from cold-worked Type 316 stainless steel.

To use this chart:

1. Locate MALE end in vertical column.
2. Locate desired FEMALE end of adapter across top of chart.
3. Catalog number of required adapter is located at intersection of columns.
4. For one piece adapter add-OP to suffix of part number.

Note:
 All Parker Autoclave Engineers adapters are supplied complete with appropriate gland nuts and sleeves unless specified without.
 * The maximum pressure rating for an adapter is determined by the connection component with the LOWEST pressure rating; that is, the two end connections and the tubing or pipe used, whichever is LOWER.
 CAUTION: See appropriate pressure section in reference to proper selection of tubing.

NOTE: NPT (Pipe) connections

- NPT threads must be sealed using a high quality PTFE tape and/or PTFE paste product. Refer to thread sealant manufacturer's instructions on how to apply thread sealant.
- Sealing performance may vary based on many factors such as pressure, temperature, media, thread quality, thread material, proper thread engagement and proper use of thread sealant.
- Customer should limit the number of times an NPT fitting is assembled and disassembled because thread deformation during assembly will result in deteriorating seal quality over time. When using only PTFE tape, consider using thread lubrication to prevent galling of mating parts.

15MAP16J16	1"	1"	1.50 (38.1)	3.00 (76.2)

Maximum pressure rating is based on the lowest rating of any component.
Actual working pressure may be determined by tubing pressure rating, if lower.

Note: For pressure rating see ordering procedure.

All Dimensions for reference only and are subject to change.

For prompt service, Parker Autoclave Engineers stocks select products. Consult factory.

NOTE: NPT (Pipe) connections

- NPT threads must be sealed using a high quality PTFE tape and/or PTFE paste product. Refer to thread sealant manufacturer's instructions on how to apply thread sealant.
- Sealing performance may vary based on many factors such as pressure, temperature, media, thread quality, thread material, proper thread engagement and proper use of thread sealant.
- Customer should limit the number of times an NPT fitting is assembled and disassembled because thread deformation during assembly will result in deteriorating seal quality over time. When using only PTFE tape, consider using thread lubrication to prevent galling of mating parts.

Adapters/Couplings - Male/Female JIC Adapters

Male /female adapters are designed to adapt a female connection to another size and/or type of connection without the need for additional couplings. In selecting an adapter involving two different sized connections, the larger connection should be on the male end where it is possible to maximize the mechanical strength of the adapter.

To use this chart:

1. Locate MALE end in vertical column.
2. Locate desired FEMALE end of adapter across top of chart.
3. Catalog number of required adapter is located at intersection of columns.
4. For one piece adapter add-OP to suffix of part number where applicable.

Other Adapters

Parker Autoclave Engineers supplies many other types of adapters on special order. These include Parker Autoclave UniVersa-Lok swaged-type connections, socketweld to O.D. tube or nominal pipe size, male or female AN connections and others.

Materials

All Parker Autoclave Engineers adapters are precision machined from cold-worked Type 316 stainless steel. Other materials available on special order.

Note: Special material couplings may be supplied with four flats in place of standard hex.

		3/4"	10,000 (689.45)									
		1"	10,000 (689.45)									

Note:
All adapters with Parker Autoclave connections are supplied with appropriate glands, collars, tube nuts and sleeves unless specified without.
JIC connections are not supplied with connection components.

* The maximum pressure rating for an adapter is determined by the connection component with the LOWEST pressure rating; that is, the two end connections and the tubing or pipe used, whichever is LOWER.
CAUTION: See appropriate pressure section in reference to proper selection of tubing.

Adapters/Couplings - EZ-Union Adapters

Parker Autoclave Engineers offers an EZ-Union adapter providing a fast and simple way to install or remove components from a pressure system. The face seal o-ring design provides a positive seal with easy and reliable operation. EZ-Union adapters can be provided with any standard or special connection combination. Optional materials available upon request. Contact your local Sales Representative for optional information and sizes not shown. The following tables show the standard adapters with dimensions.

EZ-Union Adapter

Ordering Procedure

Typical catalog number: 20 EZ M4 M4

For Butt-Weld or specials contact factory.

When ordering Male to Female adapters, Male connection is listed first.

M4 - 1/4" Medium Pressure	H4 - 1/4" High Pressure	P4 - 1/4" NPT
M6 - 3/8" Medium Pressure	H6 - 3/8" High Pressure	P6 - 3/8" NPT
M9 - 9/16" Medium Pressure	H9 - 9/16" High Pressure	P8 - 1/2" NPT
M12 - 3/4" Medium Pressure		P12 - 3/4" NPT
M16 - 1" Medium Pressure		P16 - 1" NPT

Note: Special material EZ-Unions may be supplied with four flats in place of standard hex.

Adapters/Couplings - Butt-Weld Adapters

Parker Autoclave Engineer's Butt-Weld adapters are available in a number of configurations. The following tables show models for all three pressure ranges. Models not shown and special material adapters are available upon request. Contact your local Sales Representative for more information.

Butt-Weld Adapter

Note: Standard Butt-weld adapters made from 316 SS.

Butt-Weld to High-Pressure

Catalog Number	Male BW	Female LP	Pressure Rating		Dimension inches (mm)		
			psi	bar	A Hex	B	C
M169W3B-XXS	1"	F562C	10000	689.5	1.38 (34.93)	2.44 (61.90)	1.22 (30.99)

Gland and collar supplied with high pressure connections.

Maximum pressure rating is based on the lowest rating of any component.
Actual working pressure may be determined by piping pressure rating, contact factory.

Note: For pressure rating see ordering procedure.

All Dimensions for reference only and are subject to change.

For prompt service, Parker Autoclave Engineers stocks select products. Consult factory.

Adapters/Couplings - Header Couplings

Parker Autoclave Engineer's offers weld style Header Couplings in a number of designs and materials. The standard materials are SAE-4130 and Inconel 625. Other materials are listed in the tables. Header couplings are available drilled through or blind drilled, allowing final drill through after welding. The couplings can be supplied with any style of Parker Autoclave Engineers connection or special connections if required. Header couplings come standard with 316 SS glands and collars for our medium and high-pressure connections. Models not shown are available upon request. Contact your local sales representative.

Gland and collar supplied with high pressure adapters.

Maximum pressure rating is based on the lowest rating of any component.
Actual working pressure may be determined by tubing pressure rating, if lower.

Note: For pressure rating see ordering procedure.

All Dimensions for reference only and are subject to change.

For prompt service, Parker Autoclave Engineers stocks select products. Consult factory.

Adapters/Couplings - Bulkhead Adapters

Parker Autoclave Engineers bulkhead adapters are used to connect tubing or piping of different sizes and configurations through the panel. Bulkhead adapters are machined from cold worked stainless steel. Other material and connections are available. Contact your local Sales Representative for optional information.

101F-1707	1/4" High Pressure	9/16	20000 (1379)	0.63 (15.9)	2.75 (69.9)	See Figure 3

Figure 1
See note 2

Figure 2

Figure 3

*Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower.

Note: 1) For pressure rating see selection chart. These adapters are not intended as couplings.
2) Operation of this connector will depend on the inlet hole configuration in the gauge. Check to see that tubing will seal.

For prompt service, Parker Autoclave Engineers stocks select products. Consult factory.

WARNING

FAILURE, IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met. The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

Offer of Sale

The items described in this document are available for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. Any sale contract entered by Parker will be governed by the provisions stated in Parker's standard terms and conditions of sale (copy available upon request).

Ball Valves & Actuators

2 Way, 3 Way, 4 Way Series Ball Valves Pneumatic & Electric Actuators

Pressures to 20,000 psi (1379 bar)

Principle of Operation:

Parker Autoclave Engineers high-pressure ball valves have been designed to provide superior quality for maximum performance within a variety of valve styles, sizes, and process connections. Some of the more unique design innovations include an integral one-piece trunnion mounted style ball and stem that eliminates the shear failure common in two piece designs, re-torqueable seat glands that result in longer seat life, and a low friction stem seal that reduces actuation torque and enhances cycle life.

These ball valves can also be modified to incorporate the use of special materials, seals for high temperature applications, subsea models as well as pneumatic and electric valve actuators. When it comes to high-pressure applications, these ball valves with the associated high-pressure components, provide the critical performance demanded by the high pressure market.

Universal Ball Valve Features:

- One-piece, trunnion style ball-stem design eliminates shear failure and reduces side loading found in two-piece designs
- Re-torqueable seat glands for longer seat life
- PEEK™ seats offer excellent resistance to chemicals, heat, and wear/abrasion
- Full-port flow path minimizes pressure drop
- UNS S31600 high tensile strength cold worked 316 Stainless Steel construction
- Optional materials available such as 2507 Super Duplex, Inconel 625, Hastelloy C-276, and others. Contact Factory
- Low friction, pressure assisted, graphite filled PTFE stem seal increases cycle life and reduces operating torque
- Temperature Rated 0° to 400°F (-18° to 204°C) with standard FKM (Viton®) o-rings
- Optional seals available for temperatures to 500°F (260°C) maximum
- Special material versions meeting NACE/ISO 15156 requirements are available
- Wide selection of tube or pipe end fittings available
- Electric and pneumatic actuator options are offered

ENGINEERING YOUR SUCCESS.

Table of Contents:

Many types of Ball Valves are sized primarily by connection size. Parker Autoclave Engineers offer multiple connection sizes within various bore sizes listed below, providing enhanced flow options. **It is necessary when ordering to state both bore and connection sizes.**

2 Way Ball Valve: 1/4" (6.35 mm) maximum bore	3
2 Way Ball Valve: 3/8" (9.52 mm) maximum bore	6
2 Way Ball Valve: 1/2" (12.70 mm) maximum bore	8
2 Way Ball Valve: 3/4" (19.05 mm) maximum bore	12
2 Way Ball Valve: 1" (25.40 mm) maximum bore	16
3 Way Ball Valve: 3/16" (4.77 mm) maximum bore	20
3 Way Ball Valve: 3/8" (9.52 mm) maximum bore	23
3 Way Ball Valve: 1/2" (12.70 mm) maximum bore	25
4 Way Ball Valve: 3/8" (9.52 mm) maximum bore	29
Ball Valve Actuators: Pneumatic and Electric	34
Ball Valve Lockout Options	43

2 Way Quarter Turn Ball Type 1/4" to 1" Bore

Pressures to 20,000 psi (1380 bar)

2B4, 2B6, 2B8, 2B12, 2B16 Series

2 Way Ball Valve Features:

- One-piece, trunnion style, micro-finished ball-stem design eliminates shear failure and reduces side loading found in two-piece designs.
- Re-torqueable seat glands for longer seat life.
- PEEK™ seats offer excellent resistance to chemicals, heat, and wear/abrasion.
- Full-port, bi-directional, straight-through flow path minimizes pressure drop.
- Low friction, pressure assisted, graphite filled PTFE stem seal increases cycle life and reduces operating torque.
- Quarter turn (90° actuation) from open to close with positive stop.
- FKM Fluorocarbon (Viton®) O-rings are standard, 0° to 400°F (-18° to 204°C)
- Optional seals available for temperatures to 500°F (260°C) maximum.
- Wide selection of tube and pipe end fittings available.
- 24VDC, 120 & 220VAC Electric and pneumatic actuator options.

2 Way Ball Valve Applications:

- Laboratories
- Test Stands
- Control Panels
- Pilot Plants
- Chemical/Petrochemical
- Oil & Gas Production

2 Way Series: 1/4" (6.35mm) Orifice - Pressures to 20,000 psi (1379 bar)

Connection Type	MAWP** at Room Temperature	Minimum Orifice Inches (mm)	Rated Cv*
SW250 (1/4" LP)	15,000 psi (1034 bar)	0.129 (3.28)	0.27
SW375 (3/8" LP)	15,000 psi (1034 bar)	0.250 (6.35)	1.51
SW500 (1/2" LP)	10,000 psi (690 bar)	0.250 (6.35)	1.51
SF250CX20 (1/4" MP)	20,000 psi (1379 bar)	0.109 (2.77)	0.17
SF375CX20 (3/8" MP)	20,000 psi (1379 bar)	0.203 (5.16)	0.94
SF562CX20 (9/16" MP)	20,000 psi (1379 bar)	0.250 (6.35)	1.51
F250C (1/4" HP)	20,000 psi (1379 bar)	0.094 (2.39)	0.12
F375C (3/8" HP)	20,000 psi (1379 bar)	0.125 (3.17)	0.25
F562C (9/16" HP)	20,000 psi (1379 bar)	0.188 (4.77)	0.68
1/4" FNPT	15,000 psi (1034 bar)	0.250 (6.35)	1.51
3/8" FNPT	15,000 psi (1034 bar)	0.250 (6.35)	1.51
1/2" FNPT	15,000 psi (1034 bar)	0.250 (6.35)	1.51
QS250 (1/4" QSS)	15,000 psi (1034 bar)	0.109 (2.77)	0.17
QS375 (3/8" QSS)	15,000 psi (1034 bar)	0.250 (6.35)	1.51

To determine MPa, Multiply Bar by 0.1

** Special materials often have reduced MAWP ratings, see Technical brochure for assistance

2-Way, 1/4" Bore Ball Valve

Pressure Ratings are determined by the end connections chosen, see chart.
 Maximum Temperature rating is determined by the o-ring material (see following description)
 NPT connections are limited to 400°F max due to PTFE Sealant.

To ensure proper fit use Parker Autoclave tubing

NOTE: Critical gas applications such as Hydrogen or Helium is not recommended and should be evaluated on a case by case basis. Consult factory.

See ball valve actuator section for full description, additional information, and options.

Ordering Guide:

2-way ball valves are furnished complete with tube or pipe connections. Standard valve uses FKM o-rings [400°F (204°C) maximum].

Building a Part Number: <i>Example: 2B4S20M9</i>							
Example Part Number:	2B	4	S	20	M9	–	XXX

Parts Listing and Material: Typical 1/4", 3/8" and 1/2" - 2 Way Ball Valve Series

Material of Construction:

Item #	Description	Material
1	O-Ring	FKM
2	Stem Seal	Graphite Carbon PTFE
3	Set Screw, 5/16-18	Stainless Steel
4	Stem	316 CS SS
5	Packing Gland	316 CS SS
6	Locking Piece	316 SS
7	Stopping Device	316 CW SS
8	Seat	316 CW SS
9	Seat Retainer	316 CW SS

Item #	Description	Material
10	Bottom Bearing	PEEK
11	Locknut	316 SS
12	Handle Hub	316 SS
13	Handle	304 SS
14	Thrust Washer	AMPCO 45
15	Body	316 SS
16	Seat Gland	316 CW SS
17	Set Screw, 5/16-24	Stainless

Typical spare parts found in Repair Kits

2 Way Series: 3/4" (19.05mm) Orifice - Pressures to 15,000 psi (1034 bar)

Connection Type	MAWP** at Room Temperature	Minimum Orifice Inches (mm)	Rated Cv*
SF1000CX10 (1" MP)	15,000 psi (1034 bar)	0.688 (17.48)	21.00
3/4" FNPT	10,000 psi (690 bar)	0.750 (19.05)	24.00
1" FNPT	10,000 psi (690 bar)	0.750 (19.05)	24.00
QS1000 (1" QSS)	15,000 psi (1034 bar)	0.688 (17.48)	21.00

To determine MPa, Multiply Bar by 0.1

** Special materials often have reduced MAWP ratings, see Technical brochure for assistance

2 Way 3/4" Bore Ball Valve

Pressure Ratings are determined by the end connections chosen, see chart.
 Maximum Temperature rating is determined by the o-ring material (see following description)
 NPT connections are limited to 400°F max due to PTFE Sealant.

To ensure proper fit use Parker Autoclave tubing

NOTE: Critical gas applications such as Hydrogen or Helium are not recommended and should be evaluated on a case by case basis. Consult factory.

Ordering Guide:

2-way ball valves are furnished complete with tube or pipe connections. Standard valve uses FKM o-rings [400°F (204°C) maximum].

Building a Part Number: Example: 2B12S15M16

Example Part Number:	2B	12	S	15	M16	-	XXX
Ordering Parameters/Options:	Valve Series	Ball Orifice Diameter	Material	Pressure (x 1000 psi)	End Connection		Options
Table Reference: (see below)	A	B	C	D	E		F

A - Valve Series

2B	2 Way Ball Valve
----	------------------

B - Ball Orifice Diameter

12	3/4" (19.05 mm)
----	-----------------

C - Base Material

S	316 Cold Worked (non-NACE) Stainless Steel
S	2507 Super Duplex Wetted Material (needs "F" Material Code Suffix)
S	6 Moly (25-4SMO) Material (needs "F" Material Code Suffix)
Additional Material Available, please contact factory.	

D - Pressure (x 1000 psi)

10	10,000 psi
15	15,000 psi
20	20,000 psi
Maximum MAWP based on connection type or material (whichever is lower)	

Basic Repair Kits: (see page 15 for kit contents)

When ordering a basic repair kit add an "R" prefix before product model codes A, B, and C (see above). Example: R2B12S

When ordering with "F-Options" add an "R" prefix before model codes A, B, C and F (see above). Example: R2B12S-EPR Contact your Parker Autoclave Engineers Sales Representative with any questions or refer to the Operation & Maintenance manuals (found online at www.Autoclave.com) for proper maintenance procedures.

E - End Connection

	Connection	MAWP @ RT	Seat Gland Hex
M16	SF1000CX10 (1" MP)	15,000 psi	1-7/8"
P12	3/4" FNPT	10,000 psi	1-7/8"
P16	1" FNPT	10,000 psi	1-7/8"
Q16	QS1000 (1" QSS)	15,000 psi	2" (square)

F - Options (Suffix addition)

BO	O-ring, Buna-N 40° to 250°F (121°C)
EPR	O-ring, Ethylene Propylene Rubber, 0° to 250°F (121°C)
C	PTFE U-Cup Seal 0° to 500°F max (260°C) (replaces O-rings)
K	Antivibration Gland Fitting (Cone & Thread Only)
L	Lockout Bracket (see page 43 for detail)
SOG*	ALL Parts NACE material, hardness Check, NACE Certification
2507**	2507 Super Duplex (20,000 psi max.) used with "S" Material Code
PM	Panel Mount Hardware
25-4MO**	6 Moly (25-4SMO) Material (used with "S" Material Code)
For Ball Valve Actuator Options see chart below	

Notes:

316 SS Valve bodies are cold worked and not suitable for use in NACE/ISO 15156 applications. If required, contact factory for options.

* SOG suffix also changes CW 316 SS body material to Annealed 316 SS suitable for NACE service. Contact factory for pressure reduction.

** Special materials often have reduced MAWP ratings, see Technical brochure for assistance.

Ball Valve Actuator Suffix options: For Detailed Actuator Information please see pages 34-42

Pneumatic Actuator		Electric Actuator		Actuator Operating Temperature	
		WP	EXP		
AO	Air to Open / Spring to Close	EO1	EO1X	120 volt AC 50/60 Hz	Pneumatic -10°F to 176°F (-23°C to 80°C)
AC	Air to Close / Spring to Open	EO2	EO2X	220 volt AC 50/60 Hz	Electric 0°F to 160°F (-17°C to 71°C)
AOC	Air to Open and Close (Double Action)	N/A	N/A	24 VDC	

2 Way Ball Valve Dimensions:

Panel Mounting Dimensions:

Parts Listing and Material: 3/4" - 2 Way Ball Valve Series

Material of Construction:

Item #	Description	Material
1	Set Screw, 3/8 -16	316 SS
2	O-ring	FKM
3	Stem Seal	PTFE with Graphite
4	Locknut	316 SS
5	Seat	PEEK
6	Seat Retainer	Zeron 100
7	Thrust Washer	AMPCO 45
8	Top Bearing	Virgin PEEK
9	Bottom Bearing	Virgin PEEK
10	Locking Piece	316 SS

Typical spare parts found in Repair Kits

3 Way Quarter/180° Turn Ball Type 3/16" to 1/2" Bore

Pressures to 20,000 psi (1380 bar)

3B3/3BD3, 3B6/3BD6, and 3B8/3BD8 Series

These ball valves can also be modified to incorporate the use of special materials, seals for high temperature applications, subsea models, and valve actuators. When it comes to high-pressure applications, these ball valves with the associated high-pressure components, provide the critical performance demanded by the high pressure market.

3 Way Ball Valve Features:

- One-piece, trunnion mounted style, stem design eliminates shear failure and reduces the effects of side loading found in two piece designs
- Re-torqueable seat glands for longer seat life
- Carbon filled PEEK seats offer excellent resistance to chemicals, heat, and wear/abrasion
- UNS S31600, 316 cold worked Stainless Steel construction
- Low friction pressure assisted graphite filled PTFE stem seal increases cycle life and reduces operating torque
- Available in 90° turn diverter and 180° turn switching models
- FKM (Viton®) o-rings are standard for operation from 0° to 400°F (-18° to 204°C)
- Optional o-rings available for high-temperature applications to 500°F (260°C)
- Optional wetted materials
- Wide selection of tube and pipe end fittings available
- Electric and pneumatic actuator options

3 Way Ball Valve Applications:

- Laboratories
- Test Stands
- Control Panels
- Pilot Plants
- Actuator Sequencing
- Oil & Gas Production

3 Way Series: 3/16" (4.77mm) Orifice - Pressures to 20,000 psi (1379 bar)

Connection Type	MAWP** at Room Temperature	Minimum Orifice Inches (mm)	Rated Cv
SW250 (1/4" LP)	15,000 psi (1034 bar)	0.129 (3.28)	0.50
SW375 (3/8" LP)	15,000 psi (1034 bar)	0.188 (4.77)	0.50
SW500 (1/2" LP)	10,000 psi (690 bar)	0.188 (4.77)	0.50
SF250CX20 (1/4" MP)	20,000 psi (1379 bar)	0.109 (2.77)	0.50
SF375CX20 (3/8" MP)	20,000 psi (1379 bar)	0.188 (4.77)	0.50
F250C (1/4" HP)	20,000 psi (1379 bar)	0.094 (2.39)	0.33
F375C (3/8" HP)	20,000 psi (1379 bar)	0.125 (3.17)	0.33
1/4" FNPT	15,000 psi (1034 bar)	0.188 (4.77)	0.50
3/8" FNPT	15,000 psi (1034 bar)	0.188 (4.77)	0.50
QS250 (1/4" QSS)	15,000 psi (1034 bar)	0.157 (3.99)	0.50
QS375 (3/8" QSS)	15,000 psi (1034 bar)	0.188 (4.77)	0.50

3/16" 3-Way Valve can be used for bi-directional flow, inlet pressure from side ports are limited to 15,000 psi maximum.

** Special materials often have reduced MAWP ratings, see Technical brochure for assistance

3 Way 3/16" Bore Ball Valve

Pressure Ratings are determined by the end connections chosen, see chart.
Maximum Temperature rating is determined by the o-ring material (see following description)
NPT connections are limited to 400°F max due to PTFE Sealant.

To ensure proper fit use Parker Autoclave tubing

NOTE: Critical gas applications such as Hydrogen or Helium are not recommended and should be evaluated on a case by case basis. Consult factory.

Diverter Flow Control:

*3-Way Diverter Valve
90° Turn (3BD3 Series)

3-Way Switching Valve
180° Turn (3B3 Series)

*The Diverter Valve design permits inlet flow through the bottom port.
Outlet flow may be diverted to either valve side port with only a 90° turn.

Ordering Guide:

3-way ball valves are furnished complete with tube or pipe connections. Standard valve has FKM o-rings [400°F (204°C) maximum].

Building a Part Number: Example: 3B3S20M6

Example Part Number:	3B	3	S	20	M6	-	XXX

15	15,000 psi
Maximum MAWP based on connection type or material (whichever is lower)	

Basic Repair Kits: (see page 28 for kit contents)

When ordering a basic repair kit add an "R" prefix before product model codes A, B, and C (see above). Example: R3B6S

When ordering with "F-Options" add an "R" prefix before model codes A, B, C and F (see above). Example: R3B6S-EPR Contact your Parker Autoclave Engineers Sales Representative with any questions or refer to the Operation & Maintenance manuals (found online at www.Autoclave.com) for proper maintenance procedures.

E - End Connection			
	Connection	MAWP @ RT	Seat Gland Hex
L8	SW500 (1/2" LP)	10,000 psi	1-3/8"
M9	SF562CX20 (9/16" MP)	15,000 psi	1-3/8"
M12	SF750CX10 (3/4" MP)	15,000 psi	1-3/8"
P4	1/4" FNPT	15,000 psi	1-3/8"
P6	3/8" FNPT	15,000 psi	1-3/8"
H9	F562C (9/16" HP)	15,000 psi	1-3/8"

F - Options (Suffix addition)	
BO	O-ring, Buna-N, 40° to 250°F (121°C)
EPR	O-ring, Ethylene Propylene Rubber, 0° to 250°F (121°C)
HT	O-ring, Perfluoroelastomer (Parofluor®) FFKM 30° to 500°F (260°C)
K	Antivibration Gland Fitting (Cone & Thread Only)
L	Lockout Bracket (see page 43 for detail)
SOG*	ALL Parts NACE material, hardness Check, NACE Certification
2507**	2507 Super Duplex (20,000 psi max.) used with "S" Material Code
25-4MO**	6 Moly (25-4SMO) Material (used with "S" material code)
PM	Panel Mount Hardware
For Ball Valve Actuator Options see chart below	

Notes:
316 SS Valve bodies are cold worked and not suitable for use in NACE/ISO 15156 applications. If required, contact factory for options.

* SOG suffix also changes CW 316 SS body material to Annealed 316 SS suitable for NACE service. Contact factory for pressure reduction.

** Special materials often have reduced MAWP ratings, see Technical brochure for assistance.

Ball Valve Actuator Suffix options: For Detailed Actuator Information please see pages 34-42

Pneumatic Actuator	Electric Actuator			Actuator Operating Temperature			
	WP	XP					
AO	Air to Open / Spring to Close (Diverter Style Only)		EO1	EO1X	120 volt AC 50/60 Hz	Pneumatic	-10°F to 176°F (-23°C to 80°C)
AC	Air to Close / Spring to Open (Diverter Style Only)		EO2	EO2X	220 volt AC 50/60 Hz	Electric	0°F to 160°F (-17°C to 71°C)
AOC	Air to Open and Close (Double Action)		EO3*	EO3X*	24 VDC		

* 24VDC Electric Actuator not available in 180° Actuation option (3B6 Series)

See ball valve actuator section for full description, additional information, and options

3 Way Series: 1/2" (12.7mm) Orifice - Pressures to 10,000 psi (690 bar)

Connection Type	MAWP** at Room Temperature	Minimum Orifice Inches (mm)	Rated Cv
SF750CX20 (3/4" MP)	10,000 psi (690 bar)	0.500 (12.70)	4.4
SF1000CX20 (1" MP)	10,000 psi (690 bar)	0.500 (12.70)	4.4
3/4" FNPT	10,000 psi (690 bar)	0.500 (12.70)	4.4
1" FNPT	10,000 psi (690 bar)	0.500 (12.70)	4.4
QS750 (3/4" QSS)	10,000 psi (690 bar)	0.500 (12.70)	4.4
QS1000 (1" QSS)	10,000 psi (690 bar)	0.500 (12.70)	4.4

1/2" 3-Way Valve can be used for bi-directional flow, inlet pressure from side ports can be up to 10,000 psi maximum.

** Special materials often have reduced MAWP ratings, see Technical brochure for assistance

3 Way 1/2" Bore Ball Valve

Pressure Ratings are determined by the end connections chosen, see chart.
Maximum Temperature rating is determined by the o-ring material (see following description)
NPT connections are limited to 400°F max due to PTFE Sealant.

To ensure proper fit use Parker Autoclave tubing

NOTE: Critical gas applications such as Hydrogen or Helium are not recommended and should be evaluated on a case by case basis. Consult factory.

Diverter Flow Control:

***3-Way Diverter Valve**
90° Turn (3BD8 Series)

3-Way Switching Valve
180° Turn (3B8 Series)

*The Diverter Valve design permits inlet flow through the bottom port. Outlet flow may be diverted to either valve side port with only a 90° turn.

Ordering Guide:

3-way ball valves are furnished complete with tube or pipe connections. Standard valve has FKM o-rings [400°F (204°C) maximum].

Building a Part Number: Example: 3B8S10M12

Example Part Number:	3B	8	S	10	M12	-	XXX
Ordering Parameters/Options:	Valve Series	Ball Orifice Diameter	Material	Pressure (x 1000 psi)	End Connection		Options
Table Reference: (see below)	A	B	C	D	E		F

A - Valve Series	
3B	3 Way Switching (Selector) Valve, 180° Turn
3BD	3 Way Diverter Valve (90° Turn)

B - Ball Orifice Diameter	
8	1/2" (12.7mm)

C - Base Material	
S	316 Cold Worked (non-NACE) Stainless Steel
S	2507 Super Duplex Wetted Material (needs "F" Material Code Suffix)
S	6 Moly (254-SMO) Material (needs "F" Material Code Suffix)
Additional Material Available, please contact factory.	

D - Pressure (x 1000 psi)	
10	10,000 psi
Maximum MAWP based on connection type or material (whichever is lower)	

Basic Repair Kits: (see page 28 for kit contents)

When ordering a basic repair kit add an "R" prefix before product model codes A, B, and C (see above). Example: R3B8S

When ordering with "F-Options" add an "R" prefix before model codes A, B, C and F (see above). Example: R3B8S-EPR Contact your Parker Autoclave Engineers Sales Representative with any questions or refer to the Operation & Maintenance manuals (found online at www.Autoclave.com) for proper maintenance procedures.

Parts Listing and Material: Typical 3 Way Ball Valve Series

Material of Construction:

Item #	Description	Material
1	Stem Seal w/ Spring	PTFE w/ Graphite
2	O-Ring	FKM
3	O-Ring	FKM
4	Belleville Washer	17-7PH
5	O-Ring	90 Duro FKM
6	Set Screw, 3/8-16	316 CW SS
7	Stem	316 CW SS
8	Bottom Bearing	AMPCO 45
9	Thrust Washer	AMPCO 45
10	Stopping Device	316 SS
11	Seat Retainer	15-5 PH

Item #	Description	Material
12	Belleville Washer Backup	316 CW SS
13	Locking Piece	316 SS
14	Locknut	316 SS
15	Packing Gland	316 CW SS
16	Handle Hub	316 SS
17	Seat	PEEK
18	Bottom Gland	316 CW SS
19	Body	316 CW SS
20	Seat Gland	316 CW SS
21	Handle	304 SS
22	Set Screw, 5/16-24	Stainless

Typical spare parts found in Repair Kits

4 Way Quarter/180° Turn Ball Type 3/8" Bore

Pressures to 10,000 psi (690 bar)

4B6 and 4BS6 Series

These ball valves can also be modified to incorporate the use of special materials, seals for high temperature applications, subsea models, and valve actuators. When it comes to high-pressure applications, these ball valves with the associated high-pressure components, provide the critical performance demanded by the high pressure market.

4 Way Ball Valve Features:

- One-piece, trunnion mounted style, stem design eliminates shear failure and reduces the effects of side loading found in two piece designs
- Re-torqueable seat glands for longer seat life
- Carbon filled PEEK seats offer excellent resistance to chemicals, heat, and wear/abrasion
- UNS S31600, 316 cold worked Stainless Steel construction
- Low friction pressure assisted graphite filled PTFE stem seal increases cycle life and reduces operating torque
- Quarter turn crossover, and 180° turn four way switching models available
- FKM (Viton®) o-rings are standard for operation from 0° to 400°F (-18° to 204°C)
- Optional o-rings available for high-temperature applications to 500°F (260°C)
- Optional wetted materials
- Electric and pneumatic actuator options

4 Way Ball Valve Applications:

- Laboratories
- Test Stands
- Control Panels
- Pilot Plants
- Chemical/Petrochemical
- Oil & Gas Production

4 Way Series: 3/8" (9.52mm) Orifice - Pressures to 10,000 psi (690 bar)

Connection Type	MAWP** at Room Temperature	Minimum Orifice Inches (mm)	Rated Cv*
SW500 (1/2" LP)	10,000 psi (690 bar)	0.375 (9.52)	2.5
SF375CX20 (3/8" MP)	10,000 psi (690 bar)	0.203 (5.16)	1.6
SF562CX20 (9/16" MP)	10,000 psi (690 bar)	0.312 (7.92)	2.4
SF750CX10 (3/4" MP)	10,000 psi (690 bar)	0.375 (9.52)	2.5
3/8 FNPT	10,000 psi (690 bar)	0.375 (9.52)	2.5
1/2 FNPT	10,000 psi (690 bar)	0.375 (9.52)	2.5
QS562 (9/16" QSS)	10,000 psi (690 bar)	0.359 (9.12)	2.5

** Special materials often have reduced MAWP ratings, see Technical brochure for assistance

4 Way 3/8" Bore Ball Valve

Pressure Ratings are determined by the end connections chosen, see chart.
Maximum Temperature rating is determined by the o-ring material (see following description)
NPT connections are limited to 400°F max due to PTFE Sealant.

To ensure proper fit use Parker Autoclave tubing

NOTE: Critical gas applications such as Hydrogen or Helium should be evaluated on a case by case basis. Consult factory.

Diverter Flow Control:

4 Way Crossover
90° Turn (4B6 Series)

4-Way Switching
180° Turn (4BS6 Series)
(supplied with "D" port plugged)

Ordering Guide:

4-way ball valves are furnished complete with tube or pipe connections. Standard valve has FKM o-rings [400°F (204°C) maximum].

Building a Part Number: Example: 4B6S10M9

Example Part Number:	4B	6	S	10	M9	-	XXX
Ordering Parameters/Options:	Valve Series	Ball Orifice Diameter	Material	Pressure (x 1000 psi)	End Connection		Options
Table Reference: (see below)	A	B	C	D	E		E

A - Valve Series	
4B	4 Way Ball Valve Crossover (90° Turn)
4BS	4 Way Ball Valve Switching (1800° Turn)

B - Ball Orifice Diameter	
6	3/8" (9.52mm)

C - Base Material	
S	316 Cold Worked (non-NACE) Stainless Steel
Additional Material Available, please contact factory.	

D - Pressure (x 1000 psi)	
10	10,000 psi
Maximum MAWP based on connection type or material (whichever is lower)	

Basic Repair Kits: (see page 33 for kit contents)

When ordering a basic repair kit add an "R" prefix before product model codes A, B, and C (see above). Example: R4B6S

When ordering with "F-Options" add an "R" prefix before model codes A, B, C and F (see above). Example: R4BS6S-EPR Contact your Parker Autoclave Engineers Sales Representative with any questions or refer to the Operation & Maintenance manuals (found online at www.Autoclave.com) for proper maintenance procedures.

E - End Connection			
	Connection	MAWP @ RT	Seat Gland Hex
L8	SW500 (1/2" LP)	10,000 psi	1-3/8"
M6	SF375CX20 (3/8" MP)	10,000 psi	1-3/8"
M9	SF562CX20 (9/16" MP)	10,000 psi	1-3/8"
M12	SF750CX10 (3/4" MP)	10,000 psi	1-3/8"
P6	3/8" FNPT	10,000 psi	1-3/8"
P8	1/2" FNPT	10,000 psi	1-3/8"

F - Options (Suffix addition)	
BO	O-ring, Buna-N 40° to 250°F (121°C)
EPR	O-ring, Ethylene Propylene Rubber, 0° to 250°F (121°C)
HT	O-ring, Perfluoroelastomer (Parofluor®) FFKM 30° to 500°F (260°C)
K	Antivibration Gland Fitting (Cone & Thread Only)
L	Lockout Bracket (see page 43 for detail)
SOG*	ALL Parts NACE material, hardness Check, NACE Certification
PM	Panel Mount Hardware
For Ball Valve Actuator Options see chart below	

Notes:
316 SS Valve bodies are cold worked and not suitable for use in NACE/ISO 15156 applications. If required, contact factory for options.

* SOG suffix also changes CW 316 SS body material to Annealed 316 SS suitable for NACE service. Contact factory for pressure reduction.

** Special materials often have reduced MAWP ratings, see Technical brochure for assistance.

Ball Valve Actuator Suffix options: For Detailed Actuator Information please see pages 34-42

Pneumatic Actuator		Electric Actuator		Actuator Operating Temperature		
		WP	XP			
AO	Air to Open / Spring to Close (Diverter Style Only)	EO1	EO1X	120 volt AC 50/60 Hz	Pneumatic	-10°F to 176°F (-23°C to 80°C)

Typical spare parts found in Repair Kits

Ball Valve Actuators

Pneumatic and Electric

Single and Double Acting Pneumatic
24VDC, 120 and 220 VAC Electric

Principle of Operation:

Pneumatic and Electric Actuators

Pneumatic ball valve actuators found on pages 35-42 and are available for every bore/size option we offer (90° or 180° as needed). Our standard weather-proof housing is corrosion resistant anodized aluminum, Stainless Steel materials are available. CE Marked and SIL3 rated.

Parker Autoclave Engineers offers an ISO 5211 compliant pneumatic actuator with mounting configuration for NAMUR solenoid valves, limit switches or positioner as standard. Electric actuators (pages 37-42) are available in Weather-proof or Explosion-proof styles depending on location. Both varieties come standard with two (15 amp SPDT) position switches (SPDT). Explosionproof version includes an external handwheel for manual operation.

Ball Valve Actuators Features:

Pneumatic

- Temperature Range of 0° to 176°F (-18° to 80°C) with Buna-N Nitrile Seals
- Air-to-open/spring-to-close
- Air-to-close/spring-to-open
- Air-to-open and close (double acting)
- Visual Position Indication as Standard, Limit switches
- Anodized Aluminum Weather-proof housing as standard
- Stainless steel housing for corrosive atmospheres can be ordered
- Extended Temperature operation with Silicone Seals from 0° to 300°F (-18° to 150°C)
- CE Marked, SIL3 Rated

Electric

- Interface with control systems for automated operation and monitoring
- Weather-Proof NEMA 4X Polyester Housing Standard, 0° to 160°F (-18° to 70°C)
- 120 & 220 VAC, 50/60 Hz standard
- 24VDC
- Explosion-Proof, NEMA 7X Enclosure available
- CE mark available

Actuators: Pneumatic Operated Ball Valves (AO and AC)

90° Actuation/Spring Return

Valve Series*	Dimension Data - Inches (mm)										Actuator Weight .lbs	Air Usage

* Add the suffix **-AO** or **-AC** to the appropriate valve catalog number for a complete valve assembly. Actuators do not have repair kits and must be returned to factory for repair.

SPECIFICATIONS:

- Control Air Pressure: 80 to 150 psi (6 to 10 bar)
- 1/4" NPT female air connector
- **AO**: Air to open/spring to close
- **AC**: Air to close/spring to open
- Actuators operating temperature: -10°F to 176°F (-23°C to 80°C)
- High temperature actuator option available, consult factory
- Stainless steel housing actuator models available, consult factory
- Actuators available with limit switches and visual indicators.
- Corrosion resistant anodized aluminum housing.
- Meets ISO 5211 Solenoid Mounting dimensions
- CE Marked, SIL3 Rated

Actuators: Pneumatic Operated Ball Valves (AOC - Double Acting)

90° and 180° Actuation - No Spring

Figure 2

Lock-out Options: Ball Valves (2B4, 2B6, 2B8, 2B12, 2B16, 3BD3, 3BD6, 3BD8)

Versions: 2B4, 2B6, 3BD3, 3BD6

Versions: 2B8, 2B12, 2B16, 3BD8

-L Suffix option

Using the “-L” suffix option delivers the bolt-on Stainless Steel locking bracket shown above for the following Ball Valve Sizes:

- All 2-Way Ball Valves
- All 3BD (90° rotation) Series Ball Valves

We do not offer a metal lockout bracket for the 3-way 180° handle rotation ball valves (3B3, 3B6, 3B8). Nor do we offer any metal lockout bracket for the 4-way ball valve. To upgrade valves already in operation, order mounting kits using these part numbers: (includes bolting hardware, and modified handle, but does not include lock)

- | | |
|----------------------------|----------------------------|
| 2B4-L For all 2B4 valves | 3BD3-L For all 3BD3 valves |
| 2B6-L For all 2B6 valves | 3BD6-L For all 3BD6 valves |
| 2B8-L For all 2B8 valves | 3BD8-L For all 3BD8 valves |
| 2B12-L For all 2B12 valves | |
| 2B16-L For all 2B16 valves | |

Ball Valve Clam Shell Handle Lock-Out:

(ordered separately, lock not included)

Clam Shell Design covers ball valve handle to prevent unauthorized access during any Lock-Out, Tag-Out maintenance or emergency situation. This clamshell design is available in four (4) sizes dependent on handle length:

- P/N AE004855 - 1" to 2.5" handle length
- P/N 90088 - 2.5" to 5.0" handle length
- P/N 90194 - 6.5" to 10" handle length
- P/N AE004350 - 8" to 13" handle length

This product is optional for all ball valve sizes but necessary for all 3-way (3B series) Ball Valves that have a 180° handle turn and both 4-way (4B and 4BS Series) Ball Valves. We do not offer a metal bracket lock-out option for these valves at this time.

Ball Valve

Double Block & Bleed, 1/4 Turn

3/8" & 5/8" Bore to 15,000 psi (1034 bar)

6DB and 10DB Series

Parker Autoclave Engineers Double Block & Bleed valve is a two-stem ball valve with needle style vent valve providing economical and reliable isolation in critical areas superior in comparison to a standard, single valve. This valve is designed for use where critical isolation is needed to ensure that leakage does not occur. Our 3/8" and 5/8" Double Block & Bleed valves are designed to save space and weight while capable of pressures to 15,000 psi (1034 bar). These ball valves can also be modified to incorporate the use of special materials, optional seals with and capability for high temperature applications to 500°F (260°C).

Double Block & Bleed Ball Valve Features:

- One-piece, trunnion mounted style, stem design eliminates shear failure and reduces the effects of side loading found in two piece designs
- Re-torqueable seat glands for longer seat life
- Carbon filled PEEK seats offer excellent resistance to chemicals, heat, and wear/abrasion
- Vee-Stem Needle Vent Valve with PTFE Packing
- Full-port flow path minimizes pressure drop
- Manufactured using UNS S31600 316 cold worked Stainless Steel
- Low friction pressure assisted graphite filled PTFE stem seal increases cycle life and reduces operating torque
- FKM o-rings for operation from 0° to 400°F (-18 to 204°C)

Traceability is ensured by use of heat and purchase order codes etched on valve body that also includes model number, MAWP rating, and material type references. Parker Autoclave Engineers' valves are complemented by a complete line of Medium Pressure Cone & Thread, Quick Set (QSS), or NPT fittings, check valves, relief valves, and line filters.

ENGINEERING YOUR SUCCESS.

6DB Series: .323" (8.20mm) Orifice - Pressures to 15,000 psi (1034 bar)

Connection Type	MAWP** at Room temperature	Minimum Orifice Inches (mm)	Rated C _v
SW500 (1/2" LP)	10,000 psi (690 bar)	0.323 (8.20)	2.3

** Special materials often have reduced MAWP ratings, see Technical brochure for assistance

6DB Series Ball Valve Series

Pressure Ratings are determined by the end connections chosen, see chart. Maximum Temperature rating is determined by the o-ring material. NPT connections are limited to 400°F max due to PTFE Sealant.

See ball valve actuator section for full description, additional information, and options.

Ordering Guide:

For complete information on available end connections and material options, see below. 6DB ball valves are furnished complete with tube or pipe connections. Standard valve has FKM o-rings [400°F (204°C) maximum].

10DB Series 5/8" Bore Ball Valve Material:

5/8" Double Block and Bleed Ball Valve Part Identification

Many valve parts are duplicated but are only identified once for clarity.

Ball Valve

Subsea Series, 2 Way & 3 Way

Internal Pressures to 20,000 psi (1379 bar)
Water Depth to 12,500 ft. (3810m)

Principle of Operation:

Parker Autoclave Engineers subsea ball valves have been designed in accordance with ASME B31.3 Chapter IX High Pressure piping standards to fulfill the ever growing subsea applications in the petroleum industry as well as the need for externally pressurized components in other markets. Utilizing the same design technology as the standard ball valve, the subsea design incorporates the necessary design alterations to provide a reliable externally pressurized valve for the subsea industry.

Parker Autoclave Engineers has the most connection options available and all the associated tubing, fittings and adapters you would need to outfit any application you might have, above or below the surface. Traceability is ensured by use of heat and purchase order codes etched on valve body that also includes model number, pressure rating, and material type references.

Subsea Ball Valve Features:

- One-piece, trunnion mounted style, stem design eliminates shear failure and reduces the effects of side loading found in two piece designs
- Re-torqueable seat glands for longer seat life
- PEEK seats offer excellent resistance to chemicals, heat, and wear/abrasion
- Full-port flow path minimizes pressure drop
- UNS S31600/S31603 CW 316 Stainless Steel Material as standard. Optional materials available
- Low friction, pressure assisted, graphite filled PTFE stem seal increases cycle life and reduces operating torque
- Buna-N o-ring (Nitrile) standard, -20° to 250°F (-29° to 121°C)
- Additional seals engineered to prevent water and silt ingress to any threaded or rotating parts
- Designed to accept multiple types of tube and pipe end connections

Subsea Ball Valve Applications:

- Subsea Hydraulic Manifolds
- Subsea Control Umbilicals
- Subsea Wellheads and Control Packages

ENGINEERING YOUR SUCCESS.

Principle of Subsea Operation and Design:

The Parker Autoclave Engineers ball valves can be utilized to switch or isolate flow. The standard material of construction of the valve is 316 cold worked 316/316L with PEEK seats, graphite filled PTFE stem seal, and o-ring material as required by the process fluid.

The subsea ball valve design incorporates additional o-ring seals, which prevent the ingress of seawater into the valve which would adversely affect the operation of the valve as well as contaminate the process fluid. A significant feature of the subsea design is a thrust washer positioned under the stem preventing outside sea water from moving the stem from its aligned position.

Subsea ball valves are designed to facilitate operation by a Remote Operated vehicle (ROV). No handle or valve stop is provided as standard in preparation for mating to an ROV acceptable actuator. ROV operator assemblies are used for valve mounting and to provide positive valve stop for precise 90° operation.

Adaptable for Remote Operated Vehicle (ROV) operation by customer.

Note:
Third party actuator shown above is not available from Parker Autoclave Engineers

Various tube and pipe connections with valve bore sizes from 3/16" to 1" are available within a variety of valve configurations capable of up to 12,500' water depth (5,500 psi external pressure).

Contact Parker Autoclave Engineers technical sales support or your local distributor for more information on optional materials of construction, seal materials and valve configurations to fit your application requirements.

Subsea Actuation Torque

2 Way Subsea Ball Valve	Breakout Torque	Running Torque
1/4" Orifice Stem @ 20,000 psi	75 in-lbf (9 Nm)	70 in-lbf (9 Nm)
3/8" Orifice Stem @ 20,000 psi	275 in-lbf (31 Nm)	150 in-lbf (17 Nm)
1/2" Orifice Stem @ 15,000 psi	690 in-lbf (78 Nm)	425 in-lbf (48 Nm)
3/4" Orifice Stem @ 15,000 psi	140 ft-lb (190 Nm)	90 ft-lb (122 Nm)
1" Orifice Stem @ 10,000 psi	200 ft-lb (271 Nm)	150 ft-lb (203 Nm)

3 Way Subsea Ball Valve	Breakout Torque	Running Torque
3/16" Orifice Stem @ 20,000 psi	75 in-lbf (9 Nm)	70 in-lbf (9 Nm)
3/8" Orifice Stem @ 10,000 psi	275 in-lbf (31 Nm)	150 in-lbf (17 Nm)
1/2" Orifice Stem @ 10,000 psi	450 in-lbf (51 Nm)	420 in-lbf (47 Nm)

Breakout Torque is torque needed to initially rotate valve when in closed position with full MAWP on one side and 0 psi on the other.

Running Torque is torque needed to rotate the valve at full MAWP

2 Way Subsea Series: 1/4" (6.35mm) Orifice

Pressures to 20,000 psi (1379 bar)

Connection Type	MAWP at Room Temperature	Minimum Orifice Inches (mm)	Rated Cv
SF250CX20 (1/4" MP)	20,000 psi (1379 bar)	0.109 (2.77)	0.17
SF375CX20 (3/8" MP)	20,000 psi (1379 bar)	0.203 (5.16)	0.94
SF562CX20 (9/16" MP)	20,000 psi (1379 bar)	0.250 (6.35)	1.51
1/4" FNPT	15,000 psi (1034 bar)	0.250 (6.35)	1.51
3/8" FNPT	15,000 psi (1034 bar)	0.250 (6.35)	1.51
1/2" FNPT	15,000 psi (1034 bar)	0.250 (6.35)	1.51

2 Way 1/4" Bore Subsea Ball Valve

Pressure Ratings are determined by the end connections chosen, see chart.
 Maximum Temperature rating is determined by the o-ring material.
 PAE Ball Valves are designed to be used in fully open or fully closed position.
 NPT connections are limited to 400°F max due to PTFE Sealant.

To ensure proper fit use Parker Autoclave tubing

NOTE: Critical gas applications such as Hydrogen or Helium should be evaluated on a case by case basis. Consult factory.
 Ball Valves are designed to be operated in fully open or fully closed position

Ball Valve O-ring Options:

V	FKM material: 0° to 400°F (-18° to 204°C)
EPR	Propylene Rubber: -20° to 250°F (-29° to 121°C)

Ordering Guide:

For complete information on available end connections, see previous page. 2-way ball valves are furnished complete with tube or pipe connections. Standard valve has Buna-N o-rings [250°F (121°C) maximum].

3	O-Ring	Buna-N
4	O-Ring	Buna-N
5	Thrust Washer	AMPCO 45
6	Seat	Arlon 1260
7	Seat Retainer	316 CW SS
8	Locking Piece	316 SS
9	Lock Nut	316 SS
10	Bottom Gland	316 SS
11	Thrust Washer	AMPCO 45
12	Bottom Bearing	AMPCO 45
13	Body	316 CW SS
14	Stem	316 CW SS
15	Packing Gland	316 CW SS
16	2 Way Seat Gland	316 CW SS

Typical spare parts found in Repair Kits

Please reference drawing on Page 8

3/8" 2 Way Subsea Ball Valve Dimensions:

3/8" 2 Way Subsea Ball Valve

NOTE:

1. MAWP (See Table)
2. Maximum Sea Depth 11,500 FT (3505 meters)
3. Maximum External Pressure 5,500 psi (379 bar)

Dimensions for reference only and subject to change.

NOTE:

Valve Stem has no stop supplied as standard.
Stem will rotate 360° unless used with Subsea Actuator or Handle/Stop is ordered.

2 Way Subsea Series: 1/2" (12.7mm) Orifice

Pressures to 15,000 psi (1034 bar)

Connection Type	MAWP at Room Temperature	Minimum Orifice Inches (mm)	Rated C _v
SF750CX20 (3/4" MP)	15,000 psi (1034 bar)	0.500 (12.70)	10.2
SF1000CX20 (1" MP)	15,000 psi (1034 bar)	0.500 (12.70)	10.2
1/2" FNPT	15,000 psi (1034 bar)	0.500 (12.70)	10.2
3/4" FNPT	10,000 psi (690 bar)	0.500 (12.70)	10.2
1" FNPT	10,000 psi (690 bar)	0.500 (12.70)	10.2

2 Way 1/2" Bore Subsea Ball Valve

Pressure Ratings are determined by the end connections chosen, see chart.
 Maximum Temperature rating is determined by the o-ring material.
 PAE Ball Valves are designed to be used in fully open or fully closed position.
 NPT connections are limited to 400°F max due to PTFE Sealant.

To ensure proper fit use Parker Autoclave tubing

NOTE: Critical gas applications such as Hydrogen or Helium should be evaluated on a case by case basis. Consult factory.
 Ball Valves are designed to be operated in fully open or fully closed position

Ball Valve O-ring Options:

V	FKM material: 0° to 400°F (-18° to 204°C)
EPR	Propylene Rubber: -20° to 250°F (-29° to 121°C)

Ordering Guide:

For complete information on available end connections, see previous page. 2-way ball valves are furnished complete with tube or pipe connections. Standard valve has Buna-N o-rings [250°F (121°C) maximum].

Building a Part Number: Example: S2B8S15M16

Example Part Number:	S2B	8	S	15	M16	-	XXX
Ordering Parameters/Options:	Valve Series	Ball Orifice Diameter	Material	Pressure (x 1000 psi)	End Connection		Options
Table Reference: (see below)	A	B	C	D	E		F

A - Valve Series

S2B	Subsea 2 Way Ball Valve
-----	-------------------------

B - Ball Orifice Diameter

8	1/2" (12.7mm)
---	---------------

C - Base Material

S	UNS S31600/S31603 CW 316 SS (options, contact factory)
IN625	IN625 UNS N06625, Inconel 625

D - Pressure (x 1000 psi)

10	10,000 psi
15	15,000 psi

E - End Connection

	Connection	MAWP @ RT	Seat Gland Hex
M12	SF750CX20 (3/4" MP)	15,000 psi	1.75"
M16	SF1000CX20 (1" MP)	15,000 psi	1.75"
P8	1/2" NPT	10,000 psi	1.75"
P12	3/4" NPT	10,000 psi	1.75"
P16	1" NPT	10,000 psi	1.75"

F - Options

V	FKM material: 0° to 400°F (-18° to 204°C)
EPR	Ethylene Propylene Rubber: -20° to 250°F (-29° to 121°C)
SOG	NACE Material, Hardness Verification/Certificate
IN625	UNS N06625 Inconel 625 Materials
AP	All Parts (including collar and gland) optional to use with special materials
K	Antivibration Gland Fitting (Cone and Thread Connections only)
H	Handle/Handle Stop

Basic Repair Kits:

When ordering a basic repair kit add an "R" prefix before product model codes A, B, and C (see above).
Example: **RS2B8S**

When ordering with "F-Options" add an "R" prefix before model codes A, B, C and F (see above).
Example: **RS2B8S-EPR**

Contact your Parker Autoclave Engineers Sales Representative with any questions.

Material of Construction:

Item #	Description	Material
1	O-Ring	Buna-N
2	O-Ring	Buna-N
3	O-Ring	Buna-N
4	U-Cup Seal Assembly	Graphite/Carbon PTFE
5	Thrust Washer	AMPCO 45
6	Seat	316 CW SS
7	Seat Retainer	316 CW SS
8	Lock Nut	316 SS
9	Packing Gland	316 CW SS
10	Bottom Bearing	AMPCO 45
11	Thrust Washer	AMPCO 45
12	Bottom Gland	316 SS
13	Stem	316 CW SS
14	Locking Piece	316 SS
15	2 Way Seat Gland	316 CW SS
16	Body	316 CW SS

Typical spare parts found in Repair Kits

Please reference drawing on Page 11

1/2" 2 Way Subsea Ball Valve Dimensions:

1/2" 2 Way Subsea Ball Valve

NOTE:

- 1. MAWP (See Table)
- 2. Maximum Sea Depth 11,500 FT (3505 meters)
- 3. Maximum External Pressure 5,500 psi (379 bar)

Dimensions for reference only and subject to change.

NOTE:

Valve Stem has no stop supplied as standard.
Stem will rotate 360° unless used with Subsea Actuator or Handle/Stop is ordered.

2 Way Subsea Series: 3/4" (19mm) Orifice

Pressures to 15,000 psi (1034 bar)

Connection Type	MAWP at Room Temperature	Minimum Orifice Inches (mm)	Rated C _v
SF1000CX10 (1" MP)	15,000 psi (1034 bar)	0.688 (17.48)	21
3/4" FNPT	10,000 psi (690 bar)	0.750 (19.05)	24
1" FNPT	10,000 psi (690 bar)	0.750 (19.05)	24

2 Way 3/4" Bore Subsea Ball Valve

Pressure Ratings are determined by the end connections chosen, see chart.
 Maximum Temperature rating is determined by the o-ring material.
 PAE Ball Valves are designed to be used in fully open or fully closed position.
 NPT connections are limited to 400°F max due to PTFE Sealant.

To ensure proper fit use Parker Autoclave tubing

NOTE: Critical gas applications such as Hydrogen or Helium should be evaluated on a case by case basis. Consult factory.
 Ball Valves are designed to be operated in fully open or fully closed position

Ball Valve O-ring Options:

V	FKM material: 0° to 400°F (-18° to 204°C)
EPR	Propylene Rubber: -20° to 250°F (-29° to 121°C)

Ordering Guide:

For complete information on available end connections, see previous page. 2-way ball valves are furnished complete with tube or pipe connections. Standard valve has Buna-N o-rings [250°F (121°C) maximum].

1" 2 Way Subsea Ball Valve Dimensions:

1" 2 Way Subsea Ball Valve

NOTE:
 1. MAWP (See Table)
 2. Maximum Sea Depth 11,150 FT (3400 meters)
 3. Maximum External Pressure 5,000 psi (345 bar)
 Dimensions for reference only and subject to change.

NOTE:
 Valve Stem has no stop supplied as standard.
 Stem will rotate 360° unless used with Subsea Actuator or Handle/Stop is ordered.

3 Way Subsea Series: 3/16" (4.77mm) Orifice

Pressures to 20,000 psi (1379 bar)

Connection Type	MAWP at Room Temperature	Minimum Orifice Inches (mm)	Rated C _v
SF250CX (1/4" MP)	20,000 psi (1379 bar)	0.109 (2.77)	0.26
SF375CX (3/8" MP)	20,000 psi (1379 bar)	0.188 (4.77)	0.5
SF562CX (9/16" MP)	20,000 psi (1379 bar)	0.188 (4.77)	0.5
F250C (1/4" HP)	20,000 psi (1379 bar)	0.094 (2.39)	0.18
F375C (3/8" HP)	20,000 psi (1379 bar)	0.125 (3.17)	0.33
1/4" FNPT	15,000 psi (1034 bar)	0.188 (4.77)	0.50
3/8" FNPT	15,000 psi (1034 bar)	0.188 (4.77)	0.50

3 Way 3/16" Bore Subsea Ball Valve

Pressure Ratings are determined by the end connections chosen, see chart.
 Maximum Temperature rating is determined by the o-ring or PEEK seat material
Note: Side inlet pressure not recommended. Bottom inlet pressure only.
 PAE Ball Valves are designed to be used in fully open or fully closed position.
 NPT connections are limited to 400°F max due to PTFE Sealant.

To ensure proper fit use Parker Autoclave tubing

NOTE: Critical gas applications such as Hydrogen or Helium should be evaluated on a case by case basis. Consult factory.
 Ball Valves are designed to be operated in fully open or fully closed position

Ball Valve O-ring Options:

V	FKM material: 0° to 400°F (-18° to 204°C)
EPR	Propylene Rubber: -20° to 250°F (-29° to 121°C)

See ball valve actuator section for full description, additional information, and options.

Ordering Guide:

For complete information on available end connections, see previous page. 3-way ball valves are furnished complete with tube or pipe connections. Standard valve has Buna-N o-rings [250°F (121°C) maximum].

17	Packing Gland	316 CW SS
18	Seat Gland	316 CW SS

Typical spare parts found in Repair Kits

Please reference drawing on Page 23

3/8" 3 Way Subsea Ball Valve Dimensions:

3/8" 3 Way Subsea Ball Valve

NOTE:

- 1. MAWP (See Table)
- 2. Maximum Sea Depth 11,500 FT (3505 meters)
- 3. Maximum External Pressure 5,000 psi (345 bar)

Dimensions for reference only and subject to change.

NOTE:

Valve Stem has no stop supplied as standard.
Stem will rotate 360° unless used with Subsea Actuator or Handle/Stop is ordered.

3 Way Subsea Series: 1/2" (12.7mm) Orifice

Pressures to 10,000 psi (690 bar)

Connection Type	MAWP at Room Temperature	Minimum Orifice Inches (mm)	Rated C _v
SF750CX20 (3/4" MP)	10,000 psi (690 bar)	0.500 (12.70)	4.4
SF1000CX20 (1" MP)	10,000 psi (690 bar)	0.500 (12.70)	4.4
3/4" FNPT	10,000 psi (690 bar)	0.500 (12.70)	4.4
1" FNPT	10,000 psi (690 bar)	0.500 (12.70)	4.4

3 Way 1/2" Bore Subsea Ball Valve

Pressure Ratings are determined by the end connections chosen, see chart. Maximum Temperature rating is determined by the o-ring or PEEK seat material.
Note: Side inlet pressure not recommended. Bottom inlet pressure only.
 PAE Ball Valves are designed to be used in fully open or fully closed position.
 NPT connections are limited to 400°F max due to PTFE Sealant.

To ensure proper fit use Parker Autoclave tubing

NOTE: Critical gas applications such as Hydrogen or Helium should be evaluated on a case by case basis. Consult factory.
 Ball Valves are designed to be operated in fully open or fully closed position

Ball Valve O-ring Options:

V	FKM material: 0° to 400°F (-18° to 204°C)
EPR	Propylene Rubber: -20° to 250°F (-29° to 121°C)

Flow Configuration

See ball valve actuator section for full description, additional information, and options.

Ordering Guide:

For complete information on available end connections, see previous page. 3-way ball valves are furnished complete with tube or pipe connections. Standard valve has Buna-N o-rings [250°F (121°C) maximum].

Building a Part Number: Example: 3B8S10M12

Example Part Number:	S3B	8	S	10	M12	-	XXX
Ordering Parameters/Options:	Valve Series	Ball Orifice Diameter	Material	Pressure (x 1000 psi)	End Connection		Options
Table Reference: (see below)	A	B	C	D	E		F

A - Valve Series	
S3B	3 Way Subsea Switching Valve (180° Handle Turn)
S3BD	3 Way Subsea Diverter Valve (90° Handle Turn)

B - Ball Orifice Diameter	
8	1/2" (12.7mm)

C - Base Material	
S	UNS S31600/S31603 CW 316 SS (options, contact factory)
IN625	IN625 UNS N06625, Inconel 625

D - Pressure (x 1000 psi)	
10	10,000 psi

E - End Connection			
	Connection	MAWP @ RT	Seat Gland Hex
M12	SF750CX20 (3/4" MP)	10,000 psi	1.75"
M16	SF1000CX20 (1" MP)	10,000 psi	1.75"
P12	3/4" NPT	10,000 psi	1.75"
P16	1" NPT	10,000 psi	1.75"

F - Options	
V	FKM material: 0° to 400°F (-18° to 204°C)
EPR	Ethylene Propylene Rubber: -20° to 250°F (-29° to 121°C)
SOG	NACE Material, Hardness Verification/Certificate
IN625	UNS N06625 Inconel 625 Materials
AP	All Parts (including collar and gland) optional to use with special materials
K	Antivibration Gland Fitting (Cone and Thread Connections only)
H	Handle/Handle Stop

Basic Repair Kits:

When ordering a basic repair kit add an "R" prefix before product model codes A, B, and C (see above). Example: **RS3B8S**

When ordering with "F-Options" add an "R" prefix before model codes A, B, C and F (see above). Example: **RS3B8S-EPR**

Contact your Parker Autoclave Engineers Sales Representative with any questions.

Diverter Flow Control:

*The Diverter Valve design permits inlet flow through the bottom port. Outlet flow may be diverted to either valve side port with only a 90° turn.

Material of Construction:

Item #	Description	Material
1	Stem Seal w/ Spring	PTFE w/ Graphite
2	Belleville Washer	302 SS
3	O-Ring	Buna-N
4	O-Ring	Buna-N
5	O-Ring	Buna-N
6	O-Ring	Buna-N
7	Thrust Washer	AMPCO 45
8	Locking Piece	316 SS
9	Locknut	316 SS
10	Seat	Carbon Filled Peek
11	Seat Retainer	Nitronic 50 HC
12	Belleville Washer Backup	316 CW SS
13	Bottom Bearing	AMPCO 45
14	Stem	316 CW SS
15	Packing Gland	316 CW SS
16	Bottom Gland	316 CW SS
17	Body	316 CW SS
18	Seat Gland	316 CW SS

NOTE:

Valve Stem has no stop supplied as standard.
Stem will rotate 360° unless used with Subsea Actuator or Handle/Stop is ordered.

relief
valves

Relief Valves

Medium Pressure, High Pressure, and NPT Inlet Options to 75,000 psi

RVP/PRVP and RVS/PRVS Series

Principle of Operation:

Parker Autoclave Engineers relief valves are designed to open proportionally to increasing pressure. Therefore, they are not recommended for applications requiring immediate full valve flow at set pressure and should not be considered a "Safety Valve". Full flow of relief valve is defined as 110% of set pressure.

RVP Metal Seat Relief Valve:

Series RVP relief valves provide reliable venting of gases or liquids for set pressures from 3,000 psi (205 bar) minimum to 75,000 psi (5170 bar). The standard temperature range for all models is -423° to 400°F (-252° to 204°C). A high temperature option to 750°F (399°C) is also available.

These precision valves are designed for pressure gas systems, cryogenic systems, petrochemical applications and other special systems. Capable of handling air, gases, steam, vapor and liquids, they are however, not recommended for steam boiler applications nor are they ASME code stampable (K-Factors are not available).

RVS Soft Seat Relief Valve:

Series RVS relief valves utilize a PEEK soft seat design for reliable venting of gases at set pressures from 1,500 psi (103 bar) to 20,000 psi (1380 bar). The operating temperature range is -50° to 400°F (-46° to 204°C).

The soft seat design provides bubble tight sealing, repeatable pop-off, and reseal. Additionally, soft seat valves provide a higher cycle life than metal seat relief valves.

These precision valves are designed for gases and liquid systems where zero leakage is critical. They are not recommended for liquefied gases which produce gas at cryogenic temperatures below -50°F upon relief.

ENGINEERING YOUR SUCCESS.

Relief Valves: Pressures to 75,000 psi (5170 bar)

Features and Benefits:

Material:

Standard models of Relief Valves are constructed of UNS S31600, 316 cold worked stainless steel with selected components made of anti-galling stainless steel material for optimum economy and ruggedness.

Connections:

Cone and Thread versions (RVP & RVS Series):

Models 5, 10, and 20RVS Series = SF562C 9/16" Medium Pressure Cone & Thread Connection

Models 5, 10, 15, and 20RVP = SF562C 9/16" Medium Pressure Cone & Thread Connection

Models 30, 45, and 60 RVP = F375C 3/8" High Pressure Cone & Thread Connection

Model 75RVP = F312C150 5/16" Ultra-High Pressure Cone & Thread Connection

NPT Inlet Versions (PRVP & PRVS Series):

Models 5, 10 and 15 PRVS and PRVP Series = 1/2" NPT

The outlet connection on all models is a female 3/4" NPT. While adapters to other sizes and connection types are available, they must be sized for specific flow requirements. Outlet pressure cannot exceed 500 psi (35 bar) in all pressure ranges.

Orifice Sizes:

Orifice diameters range from .062 (1.57mm) to .312" (7.92mm). (See chart on page 5 for list of valve orifice options)

Full Lift for Full Flow:

These relief valves are designed to open as a function of increasing system pressure. Proper spring selection assures repeatability of opening, full lift and flow, and reseal pressures.

Reliability and Long Service Life:

Materials engineering and stringent quality control procedures combine to assure the highest quality, reliability and service life. Each valve is preset and factory sealed to ensure proper valve operation. Note: Mount as far from Pump Outlet as possible to avoid premature relief and extend valve life.

Setpoint Accuracy:

Setpoint Accuracy is $\pm 3\%$.

Re-Seat Pressure: 85% of set pressure

High Set Pressure Capability:

Unique seat construction plus over-the-nozzle guiding and proper selection of materials permits standard set pressures to 75,000 psi. (5170 bar).

Dependable Shut-Off:

Series RVP/PRVP relief valves are designed to provide shut-off of liquids and gases under pressure to commercial tightness standards. Series RVS/PRVS relief valves are designed to provide bubble tight shut off of gases and liquids.

Fewer Parts, Ease of Maintenance:

Engineered to perform with fewer basic components, both RVP/PRVP and RVS/PRVS valves facilitate minimum stocking of spare parts and ease of maintenance. The combined angle seat in the RVP/PRVP series eliminates the need for lapping in rework.

Special Requirements:

Most models available with CE Mark/PED Approval (PRVP and PRVS are exception) to Category IV. SOG (NACE MR0175) option available upon request.

Relief Valves: Pressures to 75,000 psi (5170 bar)

Options:

Parker Autoclave Engineers can supply various options on special order. A high temperature option is also available for temperatures to 750°F (399°C) for RVP or PRVP models. To specify high temperature option: Add suffix “HT” for 750°F (399°C) high temperature option.

Note: Pressure rating for elevated temperature based on derating curves. (See Technical Brochure).

Caution:

1. AE relief valves are preset and factory sealed. Warranty is voided if seal is broken by customer.
2. Maximum system operating pressure should not exceed 90% of relief valve set pressure. **Operating pressures in excess may cause weepage resulting in damage to the plug and seat.**
3. Relief Valves are not to be used as Pressure regulators, RVP has limited actuation life dependent on pressure.

Ordering Instructions:

To permit prompt and correct responses to your order, we will require the following information: quantity, valve catalog number, service requirements (liquid, gas & vapor), set pressure (PSIG - bar), and service temperature range.

All models are designed primarily for thermal expansion or low volume relief applications at high pressures where flow is not critical.

Note: Curves on this page are based on capacities of valves only and do not take tubing into account.

Caution should be exercised in proper selection of medium pressure tubing based on actual operating conditions. Two series available: 15,000 (1035 bar) and 20,000 (1380 bar).

Relief Valves: Pressures to 75,000 psi (5170 bar)

Relief Valve Dimensions and Details:

* Maximum pressure rating based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower. Note: For pressure rating see selection chart.

¹ Include suffix from original valve for correct options

Suffix	Relief Valve Options (add as suffix to Catalog number listed above)
HT	High Temperature Spring to 750°F (399°C) (RVP or PRVP Series only)
K	Antivibration Gland Fitting (Cone & Thread Connections)
HYG	Modified for use with Hydrogen/Helium
CE	CE Mark/PED Category IV (not available with PRVP or PRVS models)
SOG	Materials used are NACE Capable & Hardness verified (Maximum pressure reduction possible)
2507	UNS S32750 2507 Super Duplex Wetted Materials
HC	UNS N10276 Hastelloy C-276 Wetted Materials
IN625	UNS N06625 Inconel 625 Wetted Materials

(See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

Note: use of optional material only changes "wetted parts" to selected material. Items like collars and glands remain CW 316/316L SS. Use **-SOG** (Includes hardness check for NACE) or **-AP** suffix

accessories

Accessories

Safety Head/Rupture Discs
Pressure Gauges/Snubbers
Thermocouples

Accessories Components:

Parker Autoclave Engineers offers a complete selection of accessories to complete your system requirements.

Thermocouples and **Thermowells** are used for monitoring and controlling temperatures in systems with operating pressures up to 60,000 psi (4137 bar).

Safety Head/Rupture Disc assemblies are used to protect systems and pressure vessels from over-pressure conditions. Rupture discs are available in various pressure ranges and material options suitable for the application.

Pressure Gauges are used to monitor and control pressure. P-Style pressure gauges are available in two sizes, 4-1/2" and 6" (114.3 mm and 152.4 mm), and ranges to 80,000 psi (5515 bar). Optional electrical contact faces for pressure control are used to set high and low limits. Gauges are standard panel mount or can be flush mounted with an optional flush mount kit. H-Style stainless steel case gauges with K-Monel bourdon tube are also offered for corrosive applications up to 30,000 psi (2068 bar)

Gauge/Instrument Snubbers provide superior pressure gauge protection without compromising instrument accuracy. Available with male and female Medium and High Pressure Cone and Thread connections in 1/4" and 3/8" sizes.

ENGINEERING YOUR SUCCESS.

Pencil Type Thermocouples

Accessories - Pressures to 15,000 psi (1035 bar)

Overview:

Thermocouples provide reliable temperature measurement within a system. The design permits installation of the element in direct contact with the fluid stream, thereby providing reliable temperature measurement. The quick-connector affords system flexibility. The thermocouple tip has a grounded-type junction.

Materials:

Precision-molded plastic connectors have heavy duty, spring-loaded jack inserts for positive contact. The sheath is type 316 stainless steel with 316 SS ferrule and gland. We offer a choice of iron constantan (J) or chromel-alumel (K) type elements (please specify when ordering). Basic assembly includes 1/8" Parker Autoclave Engineers Speedbite connection with adapters for other connection sizes.

Pressure/Temperature Ratings:

Ratings to 15,000 psi (1035 bar) maximum working pressure. Temperature rating based on connection style. Low pressure Speedbite connection not recommended below -100°F (-73°C) or above 650°F (343°C).

Ordering Information:

Catalog order numbers in the table refer to the complete assembly. Add suffix "J" for iron constantan element or "K" for chromel-alumel. To order a basic thermocouple with plug/jack assembly and connection adapter but **WITHOUT** Through or Angle-Style Tee change last digit in order number to "0" and specify sheath length if different from standard 3.62" (91.94 mm) length.

Ordering examples: TP4400K 6" (152.4 mm) denotes basic thermocouple to fit into a 1/4" Parker Autoclave Engineers SpeedBite connection with chromel-alumel element and 6" (152.4 mm) sheath. TP 4401K denotes the above unit complete with through-type Tee assembly and standard 3.62" (91.94 mm) sheath.

Thermocouple Specification Table

Calibration Type	Type of Thermocouples	Temperature Range	Comments
J	Iron (+) Constantan (-)	32 to 1400°F (0 to 760°C)	Reducing atmosphere recommended. Iron leg subject to oxidation to elevated temperatures.
K	Chromel (+) Alumel (-)	-328 to 2300°F (-200 to 1260°C)	Well suited for oxidizing atmosphere. Most commonly used calibration type.

Through-Type

Catalog Number	Connection Type	Pressure Rating PSI (Bar)	Tubing Size inches (mm)	Dimensions - inches (mm)						Block Thickness

Note: All thermocouples are furnished complete with connection components unless otherwise specified.

*Adapter not required. Tee is included in standard catalog number.

Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower. Increased temperatures reduce mechanical strength. See Technical Brochure for pressure/temperature curves on most optional material. Parker Autoclave Engineers stocks select products.

All dimensions for reference only and subject to change. For prompt service, Consult your local representative.

Low Pressure Speedbite Tee matching connection size selected is included with catalog number ending in "1". (ie; TP8801J)

Angle-Type

Catalog Number	Connection Type	Pressure Rating PSI (Bar)	Tubing Size inches (mm)	Dimensions - inches (mm)						Block Thickness
				A	B	C	D Typical	E	H	
TP2202*	W125 (1/8" LP)	15,000 (1035)	1/8 (3.18)	1.00 (25.40)	0.75 (19.05)	0.31 (7.87)	3.62 (91.95)	1.38 (35.05)	7.62 (193.55)	0.50 (12.70)

Low Pressure Speedbite Tee used in Angle configuration, matching connection size selected, is included with catalog number ending in "2". (ie; TP8802J)

Sheath Type Thermocouples

Accessories - Pressures to 60,000 psi (4140 bar)

Overview:

Thermocouples provide reliable temperature measurement within a system. Similar to low pressure thermocouples, this design also permits direct temperature monitoring at any point in a fluid system. The sheath type thermocouple features grounded junction and rapid response - 100 milliseconds or less at 63.3% of a step change.

Materials:

Bodies are 15-5PH stainless steel. 316 SS sheath brazed into body with gold-nickel alloy brazing material. An aluminum terminal housing is threaded into the body for ready access to terminals. An o-ring seal provides moisture protection.

Sheath Length:

Differs for each size connection for optimum tip contact with fluid stream. Sheath diameter is 1/16".

Temperature Ratings:

Rating to 2,000°F (1093°C) at tip of thermocouple. (Refer to adjacent Pressure/Temperature chart for elevated temperatures.) Minimum operating temperature at the tip of the thermocouple: Type J = 0°F (-18°C), Type K = -328°F (200°C).

Maximum operating temperature for 15-5PH Body is 0° to 1000°F (-18° to 538°C)

Maximum operating temperature for 316 SS body is -328° to 1200°F (-200° to 650°C)

Ordering Information:

To order thermocouples for use in standard Parker Autoclave Engineers tees or crosses, use order numbers listed in table (**fittings not included as standard**). For custom length sheaths, to extend through a vessel wall or cover, calculate sheath length from the detail drawings (Fig 1 & 2) on the following page:

1. Add vessel wall or cover thickness to the distance the sheath will extend into vessel.
2. When using a basic 1/4" Parker Autoclave connection, subtract dimension "M" for proper sheath length to order.
3. For all other connection sizes, add dimension "N" to measurement obtained in step 1.
4. Order a custom length sheath by adding desired length in inches as suffix to order number.

Standard collar and gland are cold worked 316 SS. When cold worked 316 SS collar and gland are used, the physical properties are permanently altered after use above 800°F (430°C). See Technical Brochure for full description.

Series TS Medium Pressure to 20,000 psi (1380)

Note: All thermocouples are furnished complete with 1/4" Medium or High Pressure connection adapter to match tubing size selected. Union Tee or Cross sold separately.

TSJ24 and TSK24 do not extend past the wall of the bore.

*Maximum pressure rating is based on the lowest rating of any component.

Actual working pressure may be determined by tubing pressure rating, if lower. All dimensions for reference only and subject to change.

For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Thermowells

Accessories - Pressures to 20,000 psi (1379 bar)

Typical Thermowell Assembly

Overview:

Thermowells are used to provide isolation between a temperature sensor and the environment, such as liquid or gas. Thermowells protect the sensor from pressure, corrosion, abrasion or vibration caused by the process medium. Thermowells allow the temperature sensor to be removed and replaced without compromising either the ambient region or the process.

Parker Autoclave Engineers manufactures thermowells from solid bar stock to accommodate applications in the petrochemical, chemical, refining, power and other process industries.

Parker Autoclave Engineers manufactures 316SS thermowells capable of connecting to a 1" (SF1000CX) Parker Autoclave Engineers female medium pressure connection.

Materials:

Care must be taken in determining the material used for the thermowell as well as other factors. Parker Autoclave Engineers offers design assistance that includes pressure, temperature and vibration effect of the fluids. This vibration can cause well stem failure.

Standard and special thermowell materials available:

- 316 Stainless Steel
- Hastelloy
- Inconel
- Connection gland included

To order Parker Autoclave Engineers thermowell assemblies, please refer to our order guide on next page to assist in determining your needs.

Contact your local representative or the factory for technical assistance and application suggestions.

Ordering Information:

Catalog Number	Dimension "A" inches (mm)	Pressure Rating psi (bar)

TW012.00	12.00 (304.80)	20,000 (1379)

Note: Thermowells fit Autoclave's 1" medium pressure connection. (SF1000-CX). 1" connection insertion length is 1.44" (36.76).

Universal Safety Heads

Accessories - Pressures to 110,000 psi (7584 bar)

Safety Heads/Rupture Discs:

Safety Heads and Rupture Discs offer an economical and dependable relief port to guard against system over-pressure.

Parker Autoclave Engineers offers universal safety heads in three series compatible in orifice size and maximum pressure rating with Parker Autoclave Low Pressure, Medium Pressure and High Pressure valves, fittings and tubing.

Parker Autoclave Engineers Low Pressure Series SS: Parker Autoclave SpeedBite Single Ferrule compression tube connection, maximum rupture disc pressures to 15,000 psi (1034 bar).

Parker Autoclave Engineers Medium Pressure Series CSX: Parker Autoclave Medium-Pressure coned-and-threaded tube connection, maximum rupture disc pressures to 20,000 psi (1379 bar).

Parker Autoclave Engineers High Pressure Series CS: Parker Autoclave High Pressure coned-and-threaded tube connection, maximum rupture pressure to 110,000 psi (7584 bar).

The 3/16F style features a 3/16" blow-out diameter and a **FLAT** seat which can be ordered in pressure range from 200 to 27,000 psi (13.8 to 1862 bar).

The 1/4A style features a 1/4" blow-out diameter and an **ANGULAR** seat which can be ordered in pressures from 900 to 110,000 psi (62 to 7584 bar).

The 1/2F style features a 1/2" blow-out diameter and a **FLAT** seat which can be ordered in pressures from 500 to 10,000psi (35 to 690 bar).

Material and Features:

- Non-rotating double-cone plug design avoids galling and scoring of safety head or connection during installation. Reduces likelihood of leakage.
- Interchangeable hold-down rings permit use of several different sizes and types of rupture discs in a single safety head. Accommodates discs with rupture pressures as low as 90 psi (6.2 bar) and ranging to 60,000 psi (4137 bar) and above.
- Installs in any standard Parker Autoclave Engineers coupling, elbow, cross or tee.
- Cold-worked Type 316 SS body hold down gland and plug, all series.
- Hold down rings are corrosion resistant stainless steel.

Consult Local Sales Representative for safety head assemblies rated above 60,000 psi (4137 bar).

ASME Safety Head Option is no longer available due to a change in code April 2016 that makes it impractical to manufacture.

Ordering Information:

To order an Parker Autoclave Engineers Universal Safety Head, use the catalog order number from table. ADD THE SIZE OF THE RUPTURE DISC YOU WANT AS A SUFFIX TO THE CATALOG NUMBER; SUCH AS CS6600-1/4A.

Then order desired rupture discs from rupture disc section. (This is important since the disc size determines which hold-down ring will be furnished with the safety head.) Please note: Plug is included.

Hold-Down Nut Torque Values					
Torque @ Minimum Pressure		Torque @ Maximum Pressure		Rupture Disc Size Inches	Hold-Down Ring Part Number
Ft. lb. (N.m)	psi (bar)	Ft. lb. (N.m)	psi (bar)		
20 (27.1)	5000 (345)	90 (122)	26,500 (1827)	3/16 Flat†	112A-0439
40 (54.2)	4000 (276)	90 (122)	10,000 (690)	1/2 Flat	1050-7434
20 (27.1)	4000 (276)	140 (189.8)	60,000 (4137)	1/4 Angle	108A-0439

† 3/16 flat seat disc cannot be used with safety head assemblies SS6600, SS8600, 40CS9600 and CSX9600. Torque values for intermediate pressures may be linearly interpolated. Use minimum torque value for pressures lower than those shown.

Prebulged Rupture Discs

Pressures to 75,000 psi (5171 bar)

Flat Seat Rupture Disc

30° Angular Seat Rupture Disc

Note: Inconel disc normally available from stock.

Ordering Information:

Specify quantity, disc size, type, material and temperature.

- **Stock Disc(s):** Choose part number that corresponds to desired rupture rating which should be at least 110% of operating pressure. The burst rating tolerance is +/- 5% of the furnished tag rating. Discs are rated at 72°F (22°C).
- **Special Rupture Disc Order:** Special burst pressures can be ordered. The manufacturing tolerance of requested "Burst Pressure" will be +0%/-5%. For example, if a 20,000 psi disc is requested, the burst pressure of the supplied disc can be from 20,000 to 19,000 psi. This disc will have a "Burst Tolerance" of +/-5%. Based on the suppliers tolerances, the resultant disc could burst between 21,000 psi and 18,050 psi. Order number example **RD20000-5-1/4A**
- Minimum order of 6 discs required for Special Orders or for materials other than Inconel.

Disc Material	Disc Size Seat Type	Rupture Pressure Standard available Range ± 5%	Maximum Temperature Rating
	inches	psi (bar)	°F (°C)
Hastelloy C	3/16 Flat	4,400 to 65,000 (303.4 to 4481.5)	1000 (538)
	1/4 Angle	3,300 to 70,000 (227.5 to 4826.3)	1000 (538)
	1/2 Flat	1,000 to 10,000 (68.9 to 690)	1000 (538)
Monel	3/16 Flat	2,650 to 20,000 (182.7 to 1378.9)	800 (427)
	1/4 Angle	2,000 to 40,000 (137.9 to 2757.9)	800 (427)
	1/2 Flat	1,000 to 7,500 (68.5 to 517.1)	800 (427)
Inconel 600 (Standard)	3/16 Flat	2,000 to 2,700 (13.8 to 1861.6)	900 (482)
	1/4 Angle	900 to 75,000 (62.1 to 5171)	900 (482)
	1/2 Flat	500 to 10,000 (34.5 to 690)	900 (482)
Type 316 Stainless Steel	3/16 Flat	1,750 to 20,000 (120.7 to 1378.9)	900 (482)
	1/4 Angle	1,250 to 60,000 (86.2 to 4136.8)	900 (482)
	1/2 Flat	700 to 10,000 (48.3 to 690)	900 (482)

CAUTION: High pressure-to-rupture ratios, severe pressure or temperature cycling, corrosion and metal fatigue affect disc life and rupture pressure. Frequent disc replacement may be desirable to avoid premature rupture.

All dimensions for reference only and subject to change.

Pressure Gauges

P-Style High Accuracy Gauges to 80,000 psi (5115 bar)

Gauges:

Pressure gauges are offered for use in low, medium and high pressure systems to pressures up to 80,000 psi (5515 bar). Adapters are available.

Material and Features (Low, Medium and High Pressure System Gauges):

- Gauges are Dual Scale, Single Color, PSI and BAR graduations
- ASME Grade 2A, +/- .5% full scale accuracy
- Connection: Female F250C 1/4" High Pressure. **-CG** suffix required to include Collar & Gland
- Acrylic dial cover/solid front aluminum alloy case
- 316 Stainless steel Bourdon tubes**
- Gauges available with bottom entry as standard or back (**-B** suffix) entry connection
- Precision stainless steel movement for accuracy and resistance to atmospheric corrosion
- Pointer zero adjustment located on front of gauge behind dial cover for convenience
- Standard gauges are rated from -20°F to 250°F (-30°C to 121°C) dry, 20°F to 200°C (-7°C to 93°C) Liquid Filled
- Calibration report available on special orders only
- Gauges glycerin filled upon request (**-LF** suffix)

Instrument Quality Gauges:

Flush panel mounting - Panel mounting kits are stocked to permit flush panel mounting of any instrument quality gauge.

To order gauge panel mount kit:

- P-8559 4.5" Flush mount
- P-8560 6.0" Flush mount

Note: Gauge connections are female 1/4" (F250C) High Pressure coned-and-threaded connection. Furnished with collar and gland (-CG suffix).

Optional electrical contact face - Available for all instrument quality gauges. With adjustable low and high electrical contacts, this option permits gauges to provide pressure control for automatic or remote operation, or for fail-safe set points.

**Bourdon tube material for 0-30,000 psi gauge is K Monel. Bourdon tube material for 0-50,000 psi and 0-80,000 psi gauge is Inconel 718.

Pressure Gauges

H-Style Sour Service Stainless Steel Gauges - Pressures to 30,000 psi (2068 bar)

Overview:

Parker Autoclave Engineers H Series Pressure Gauges are suitable for use where ambient corrosion is a major concern and are NACE MR01-75 2002 compliant. Its stainless steel case and ring offer good appearance and excellent resistance to chemical, weather and corrosion attack. The bourdon tube is made from K-Monel providing durability and performance when used with aggressive process media.

These gauges are available dry or liquid filled (-LF suffix).

Factory Calibrated			
Catalog Number	Pressure psi (bar)	Minor Interval Value psi (bar)	Dial Diameter Inches (mm)
H-0380	0-5000 (350)	50 (5)	4-1/2 (114)
H-0336	0-10,000 (700)	100 (5)	4-1/2 (114)

H-0360	0-30,000 (2000)	250 (20)	4-1/2 (114)

* Glycerine is standard liquid filled for "LF" option

Material and Features:

- Gauges are Dual Scale, Single Color, PSI and BAR graduations.
- ASME Grade 1A, +/-1% of span accuracy
- Temperature Range (Process), -20°F to 250°F (-29°C to 121°C) - Dry, 20°F to 150°F (-7°C to 93°C) - Liquid Filled (Glycerin)
- 304 stainless steel case and ring, glass window
- K-Monel Bourdon tube and socket
- Connection: Male M562C 9/16" High Pressure Cone & Thread (API Type III) All gauges furnished with SOG 316 SS collar and gland as standard
- Precision Teflon® -coated, 400 stainless steel movement for accuracy and resistance to atmospheric corrosion.
- Pointer zero adjustment located on front of gauge behind dial cover for convenience.
- Gauges can be liquid filled (Add - LF to Catalog number)*
- Gauges are NACE MR0175-2002 compliant
- NIST Calibration reports available on special orders only

Gauge/Instrument Snubber

Accessories - Pressures to 100,000 psi (6895 bar)

Overview:

Parker Autoclave Engineers Pressure Snubbers provide protection to gauges and instrumentation from pressure surges, pulsation and shock. The unique snubber design provides superior instrument protection while not compromising instrument accuracy or reaction time. This is accomplished by the use of existing technology from our excess flow check valve with additional design features.

When sudden flow is experienced, the poppet will rise, blocking the pressure surge and a small bleed hole in the poppet will allow pressure to slowly equalize. When the pressure is equalized, the poppet will then drop allowing normal flow to the gauge. A 5 micron filter is used to prevent the hole in the plug from becoming plugged. **The snubber must be mounted in the vertical position as indicated on the unit.**

Snubbers are offered in CW316SS as standard, with either male, female or male/female connections in 1/4" and 3/8" sizes. Optional materials available upon request.

Standard O-ring is FKM rated 400°F (204°C) maximum.

Ordering Guide:

For complete information on available gauge snubber types and additional options, contact your Sales Representative.

Tools, Installation, Operation, Maintenance

Low Pressure "Speedbite", Cone & Thread:
Manual and Machine, Quick Set (QSS) Tooling

Principle of Operation:

Safe, efficient operation of any product is inherently dependent upon its proper installation. In this section the preparation and assembly of low, medium and high pressure connections is explained. Also covered is the assembly procedure for medium and high pressure Cone & Thread Connections as well as anti-vibration collet gland assemblies.

Correct installation procedures are further promoted by providing dimensional information associated with a variety of Parker Autoclave Engineers tube connections as well as the torque required to properly seat numerous Parker Autoclave Engineers components. Several tools developed by Parker Autoclave Engineers are presented to help accomplish proper valve, fitting and tubing installation and maintenance. Video tutorials are available on our website (www.Autoclave.com) and a Setup & Operational DVD is sent with every Cone and Thread Machine.

When installing or maintaining any pressure component, common practice dictates the use of proper safety equipment at all times.

Inside you will find:

- Installation Instructions for Low Pressure "Speedbite" Single Ferrule Bite-Type Compression Fittings
- Part numbers and Installation Instructions for both Medium and High Pressure Manual Cone & Thread Kits and Accessories
- Assembly and Installation Instructions for Anti-Vibration Gland Assemblies
- Part numbers and Specification detail for Cone & Thread Machine (required for all tubing sizes above 9/16")
- Connection Torque Values (for both Standard and Special Materials)
- Connection and Packing Gland Nut Sizes, Torque Wrenches and Crows Foot Wrench Adapters
- Connection Reamer Part Numbers for cleaning up Connection Sealing Surfaces
- Valve Packing, Running and Seating Torque Values
- Male and Female Connection reference drawings with dimensions with connection names
- Manual Make-up and Installation instructions for Quick Set System (QSS) - only 1/4" and 3/8" tube sizes
- Hydraulic Set Up Tool for Quick Set System (HST) - All Sizes
- Part Numbers and Specifications for the Hydraulic Tube Bender (HTB)
- Maintenance and Lubrication site locations for various Parker Autoclave Engineers valves with recommended Lubricants

ENGINEERING YOUR SUCCESS.

Installation: SpeedBite Connection

Speedbite: Single Ferrule Compression Sealing for Pressures to 15,000 psi (1034 bar)

Parker Autoclave Engineers Low Pressure "Speedbite" connections utilize a "bite-type" single ferrule compression fitting (Fig. 1) that when used with typical annealed instrument tubing (ASTM A269) that does not exceed a hardness of 90 HRB (available from Parker Autoclave) is capable of up to 15,000 psi (1034 bar) MAWP. This "bite" prevents the tubing from ejecting at these higher pressures. Designed to meet the standards of ASME B31.3 Chapter IX this connection picks up where standard single and dual ferrule compression fitting capabilities end. Available in sizes from 1/16" to 1/2" (Note: 1/2" size is restricted to 10,000 psi MAWP). Many different Exotic alloys are available (see product literature).

Installation Instructions:

Determine the length of tubing needed (see Fig. 2 on next page) by measuring the fitting to fitting, face- to-face dimension - adding the extra allowance from Table 1 for proper engagement.

Step 1. Cut tubing to length and deburr. To ensure a good joint, tube must be cut off square using a hacksaw or bandsaw (suggest at least 32 teeth per inch minimum) and sawing vice or guide. Deburr external edge with a flat file and the ID of the tube with either the Parker AE deburr tool (p/n 90257) or even the Cone & Thread Reamer tools shown on page 21.

Step 2. Lubricate male threads. (Lubrication not necessary if tube nut has Bonded Dry-Film Lubricant.) Slip gland and sleeve onto tubing.

Note: Be sure to remove gland and sleeve from components and slide them onto the tubing before inserting the tubing into the components. **Make sure larger end of sleeve is toward gland.** Push tubing into valve or fitting until it bottoms out.

Note: A small amount of process tolerable inert grease on the nose of the compression sleeve will improve sealing process.

Step 3. Turn gland until "finger-tight", THEN, TIGHTEN GLAND UNTIL SLEEVE BEGINS TO GRIP TUBING by using wrench, turning until you feel increased resistance. This is what we call "Wrench-Tight". (this differs from standard compression fitting installation)

Step 4. From this "Wrench Tight" position, note starting position of wrench. Tighten gland approximately 1-1/4 turns for the SW and 1/16" & 1/8" W connections. When installing Male Adapter (preformed ferrule tip) fitting, - only 1/8 turn is necessary.

Installation: SpeedBite Connection

Complete Connection

The illustration below (Fig. 1) shows the condition of sleeve and tubing after completion of “sleeve seating.” The sleeve has cut into the tubing (bite-type) as it moved forward into the tapered seat, upsetting material ahead of it and establishing a shoulder on the tubing to provide positive mechanical support for the tubing end-load. A properly seated sleeve cannot be displaced back and forth along the tubing but may be rotated around the tubing.

Reassembly/Plug Set

To reassemble a connection or to set a plug, insert plug or tubing with sleeve and then gland into valve or fitting. Tighten gland “finger-tight”. Tighten gland with a wrench approximately 3/8 of a turn for a gas-tight seal. After frequent reassemblies, it may take less than 3/8 turn to effect a gas-tight seal, and as little as 1/8 of a turn may be sufficient.

Figure 1

**Table 1: 10V2/SW Series Engagement Allowance	
Nominal Tube OD inches (mm)	Insertion Depth to Shoulder inches (mm)
1/16 (1.59)	0.47 (12)
1/8 (3.18)	0.47 (12)
1/4 (6.35)	0.69 (19)
3/8 (9.53)	0.69 (19)
1/2 (12.70)	0.81 (22)

Note:

- * No special torque wrenches or mandrels required.
- ** Engagement/Insertion Depth; Add this additional length (per tube end) to distance between Fitting-Face & Fitting-Face (see Figure 2 below) Bite into tubing exaggerate for clarity

Figure 2
Determine Tube Length

Fully annealed tubing (hardness max of 90 HRB) with proper outside diameter tolerances is recommended for these connection components.

When installing or maintaining any pressure component, common practice dictates the use of proper safety equipment at all times.

Installation: Coning and Threading Kits

Parker Autoclave Engineers both Medium and High Pressure coning and threading tool kits. Each kit consists of the required tools and other items necessary for your coning and threading needs. All kit items are placed in a hand-carry tool case with top tray.

Medium Pressure Kit (p/n KMCT-MT)

MCT Coning Tool and:

- 1/4, 3/8 and 9/16" collets
- 1/4, 3/8 and both 9/16" (.312" and .359" ID) Coning Blades

402 Threading Die Holder Tool and:

- 1/4, 3/8 and 9/16" guide bushing
- 1/4, 3/8 and 9/16" dies

Options:

Please note: Each Kit includes Reservoir and Support Arm Assembly as shown on page 5.

High Pressure Kit (p/n KMCT-HT)

MCT Coning Tool and:

- 1/4, 3/8 and 9/16" collets
- 1/4, 3/8 and 9/16" blades
(9/16" blades for 60,000 psi tubing only)

402 Threading Die Holder Tool and:

- 1/4, 3/8 and 9/16" guide bushing
- 1/4, 3/8 and 9/16" dies

Options:

Please note: Each Kit includes Reservoir and Support Arm Assembly as shown on page 5.

Note:

Additional Coning Blades, Collets, and Threading Dies are available for other sizes of tubing. See manual coning and threading tooling chart, Table 1 on page 5 for sizes and part numbers.

Coning and Threading Kits

Parker Autoclave Engineers manufactures a manual coning and threading tool for optimum performance with tubing sizes up to 9/16" (14.3 mm) outside diameter. These precision quality manual tools permit on-site end preparation for Parker Autoclave Engineers medium and high pressure tubing installations.

Included with all kits:

Coning Tool Assembly:

- Three Collets
- Collet Nut Wrench (p/n 90253)
- Three sets of Coning Blades (1/4" to 9/16")
- 3/32" Coning Blade Allen Wrench (p/n 90256)
- Oil/Chip Reservoir Tube (p/n MCT-RES)
- Support Arm (p/n MCT-SA)
- Four spare Set Screws (p/n 90254)
- De-burring Tool (p/n 90257)
- One quart of Cutting Oil (p/n P-8784)
- Tool Box with Tray (p/n 90255)

Threading Tool parts include:

- 1/8" Die Allen Wrench (p/n P-0285)
- Die Set Screws (p/n P-0281)
- Threading Tool with Handle
- Three Guide Bushings (1/4", 3/8", 9/16")
- Three Threading Dies (1/4", 3/8", 9/16")
- Laminated Instruction Sheet

Installation: Manual Coning and Threading Tools

Interchangeable collets for each size tubing provides proper centering of tubing. The cutting feed arrangement permits the operator to control the length of the cut. Interchangeable tool steel cutting blades are used in pairs to assure more accurate and faster coning. They are designed to square-off and finish the tube end as the cone is completed. There is a provision for applying metal cutting lubricants to the cutting zone.

For coning tool with optional support arm (For holding in vise) and chip/oil catch reservoir, add **RS** to suffix of model number. Example: MCTM4-**RS**

For threading operations the threading die holder is designed to hold the appropriate die for any of the standard Parker Autoclave Engineers tubing sizes through 9/16" (14.3 mm) outside diameter. Interchangeable guide bushings properly guide the tool for accurate thread cutting.

Reservoir (RS) Support Arm (SA)

P/N 402: Threading Tool (Threading Dies not included)

Note: Collet nut wrench (not shown) supplied with coning tool.

Table 1

Options:

Cutting Oil: **P-8784** (quart)

Laminated Instruction Sheet: **90286**

Coning Tool plus Support Arm Assembly: **MCT-SA**

Coning Tool plus Reservoir Assembly: **MCT-RES**

* All threads for Parker AE medium pressure and high pressure tubing are LH national fine (class 2).

Note: Manual coning and threading tools for 3/4" (19.1 mm) and 1" (25.4 mm) outside diameter tubing are not available. Model AEGCTM-2 Power Coning-and-Threading Machine is recommended for this tubing.

A minimum of 3" (76 mm) straight length is required to perform coning and threading operation with manual coning tool.

Installation: Manual Coning and Threading Procedure

Manual Kit Procedure

1. Cut tubing to length (see Table 2, Dwg. 1 below) and square off the end using hacksaw with at least 32 teeth per inch or abrasive cut-off wheel. (Fig.1)

Allow extra length for proper engagement into the connection as listed in Table 2.

Additional 1/16" should be added to each end to compensate for coning/end facing.

Note: When cutting tubing with abrasive cut off wheel, tubing should not be over heated effecting material properties.

TABLE 2: Engagement Allowance			
	Connection Tubing Size	Type OD x ID	Engagement Allowance in (mm)
Medium Pressure (to 20,000 psi)	SF250CX	1/4 x .109	.55 (14.0)
	SF375CX	3/8 X .203	.69 (17.6)
	SF562CX10	9/16 x .359	.81 (21)
	SF562CX20	9/16 x .312	.84 (21.3)
	SF750CX10	3/4 x .516	1.00 (25.4)
	SF750CX20	3/4 x .438	1.00 (25.4)
	SF1000CX10	1 x .688	1.38 (35)
	SF1000CX20	1 x .562	1.46 (37)
High Pressure (to 60,000 psi)	SF1500CX	1-1/2 x .937	1.88 (47.6)
	F250C	1/4 x .083	.50 (12.7)
	F375C	3/8 x .125	.69 (17.5)
	F562C	9/16 x .188	.87 (22)
	F562C40	9/16 X .250	.84 (21)
Ultra-High Pressure (to 150,000 psi)	F1000C43	1 x .438	1.62 (41.1)
	F250C100	1/4 x .083	1.18 (30.0)
	F375C100	3/8 x .125	1.10 (28.0)
	F562C100	9/16 x .188	.84 (21.3)
	F312C150	5/16 x .062	1.18 (30.0)

Manual coning and threading tools are not available for any tubing sizes over 9/16" OD, see Coning and Threading Machine section.
All dimensions for reference only and subject to change.

Drawing 1:

TABLE 3: Tubing Coning

	Tubing O.D. Inches	Cone Length inches (mm)	Number of Turns
Medium Pressure (to 20,000 psi)	1/4"	.11 (2.79)	2
	3/8"	.13 (3.30)	3-1/2
	9/16" (CX-10)	.13 (3.30)	2-1/2
	9/16" (CX-20)	.16 (4.06)	3
High Pressure (to 60,000 psi)	1/4"	.13 (3.30)	3
	3/8"	.16 (4.06)	3
	9/16" (C40)	.28 (7.11)	5-1/2
	9/16"	.21 (5.33)	4-1/2
Ultra-High Pressure (to 150,000 psi)	1/4" (C100)	.13 (3.30)	3
	3/8" (C100)	.16 (4.06)	3
	9/16" (C100)	.21 (5.33)	5 1/2
	5/16"	.19 (4.83)	3-1/2

Manual coning and threading tools are not available any tubing sizes over 9/16" OD, see Coning and Threading Machine section.
All dimensions for reference only and subject to change.

2. Install the collet and collet nut into the bottom of the coning tool housing. Remove the cutter support feed nut from the coning tool housing and install the cutters. This can be done by backing out the four set screws in the cutter support.

Note: When installing new blades, be sure the blades are flat against the holder. There should be no space between the blades and the holder.

3. Place the coning tool housing (or optional support arm), without the feed nut/cutter support assembly, in a vise. The vise should be equipped with soft jaws, and the housing should be placed in the vise to allow lubricant to flow to the cutters and cone.

4. Slide the tubing through the collet until the end of the tube appears in the coning tool housing window (see Drawing in Table 3 above). Line the end of the tube with the edge of the window as marked above and tighten the collet nut firmly in place using the collet nut wrench (Fig. 2).

Installation: Manual Coning and Threading Procedure

5. Install the feed nut/cutter support assembly into the coning tool housing. Rotate the feed nut clockwise until the top of the cutters just contact the top of the tube. **Do not** rotate the feed nut any further at this point.

6. Apply cutting oil through the lubricant opening in the end of the cutter holder or directly through the housing window (Fig. 3). A medium weight high sulphur content cutting fluid is recommended. Use the cutting oil freely during the coning operation.

7a. The distance the feed nut travels from its start position can be used to gauge the amount of travel to properly cone the tube. The amount of travel is shown in Table 3, pg 6 and is labeled "Cone Length".

7b. Another method to determine proper cone length is to count the number of turns of the feed nut. The number of turns required is listed in Table 3 under the heading "Number of Turns". This includes enough advancement of the feed nut to face-off the tube and square the edge that forms the seal surface. The feed nut is supplied with a position indicator (drilled hole) to help determine the number of turns.

8. Rotate the handle in a clockwise direction while simultaneously **slowly turning** the feed nut in a clockwise direction. Rotate the feed nut slowly and evenly to smoothly cone the tube. Loosen collet nut, remove tubing and visually inspect the cone. Use deburring tool to remove any burr on inside edge of tube after coning.

Manual Threading

9. Using the Coning Tool Body to hold the tubing for threading, clamp in vise, and slide the threading tool over the tube through the guide bushing (Fig. 4).

10. Apply a medium weight, high sulphur cutting oil to threading area (Exception: Hydrogen service - Sulphur not recommended)

11. Apply pressure to the top of the threading tool to start the cutting action. The threads are left handed, so turn the threader **counterclockwise**

to thread the tube. The threading tool may need to be periodically rotated clockwise to break and discharge metal chips. Apply lubricant freely during the threading process.

Note: The lead in chamfer (larger chamfer) on the die flutes toward guide bushing.

12. Continue to rotate die holder counterclockwise while applying cutting oil generously throughout the process until threads of the following lengths have been cut. See number of turns required in Table 5 (page 8), or length in Table 4 below.

13. After tube is coned, threaded and deburred, check for proper thread fit and length with a new collar of the proper size.

Note: Remember to flush all tubing prior to installation with a fluid that is compatible with the process fluid being used.

TABLE 4 - Inches (mm)				
Male Connection	Tube Size O.D. x I.D.	Dimensions		Thread Size and Type *
		D	L (max)

Installation: Cone & Thread Make-up Procedure

Assembly and Makeup of Connection

1. Inspect seat cone and tube cone to verify free of all lines and surface imperfections with tube face and cone edge completely smooth. Lubricate male threads of gland nut and collar/gland contact surface with a metal flake based thread lubricant. (see recommended lubricants on page 25-26 of this catalog)

Slip gland nut on tubing as shown (Fig. 5) and thread collar on tubing (turning counter-clockwise) until 1-1/2 to 2 full threads are exposed between collar and cone (Fig. 6).

Figure 5

Note: A small amount of process tolerable lubricant, such as silicone grease or any lubricating oil, on the cone tip will help with the sealing process.

Figure 6

2. Insert tubing in connection, engage gland nut and tighten "finger-tight" at least 4 complete turns (Medium Pressure) and 5-6 Turns (High Pressure) - angular misalignment will not allow rotation with fingers and could cause leakage or gland nut gall - remove and determine cause of misalignment and correct.

Figure 7

3. Tighten gland nut with torque wrench (REQUIRED) to specified values on page 16 or 17. When tightening, the use of an additional wrench is recommended to hold the fitting or valve body if not otherwise anchored.

Figure 8

Cautionary Note: The torque used to seal Cone and Thread Connections is typically much less than used on compression fittings (1/8 to 1/4 turn of gland nut from finger-tight)

Recommended Thread Anti-Seize (Not for use on coned surfaces)

Copper Anti-Seize Lubricant:
P-3580 (16 oz. can)
P-3580-8 (8 oz. can)

Moly Paste (50-70%) Anti-Seize Lubricant:
P-9766 (16 oz. can)
(See recommended lubrication sites on pages 23-24)

Specifications: Coning & Threading Machine Ordering

Benefits

- Coning and Threading of Parker Autoclave Engineers Medium and High Pressure Tubing.
- Separate heads for coning and threading are powered by a single motor and drive system.
- New design collet / support system allows for easier coning and threading of long tube lengths.
- New design tube depth gauge eliminates movement of tubing during the threading operation.

Features

- 1/2-HP TEFC motor, capacitor start
- Pop-Open die prevents thread damage; no reversing necessary on threading
- Complete tooling available; order separately
- Supplied with oil pump and reservoir
- Optional oil reservoir heater for operation below 65° F (18.3°C)
- CE marked on 220 VAC units standard
- Unit mounted on stand with locking casters for ease of mobility and stability
- Guard option - see next page

Ordering Procedure

Tooling must be ordered separately see Table 2 listing

Model	Description
AEGCTM-2	115 VAC 60Hz
AEGCTM-2E-CE	220 VAC 50hz - CE Marked
AEGCTM-2WOH	Standard units with Oil Heater
AEGCTM-2EWOH-CE	

Approximate Dimensions:
56" Height x 28" Width x 20" Depth
(142cm x 71cm x 51 cm)

Shipping Weight:
350 pounds (158.7 Kg)

Cutting Oil:
Part Number: P-8699, 3-1/2 Gallon (11.36 liter) equals Reservoir Capacity

Note 1: A minimum of 5 inches (127mm) straight length of tubing is required to perform coning and threading operations.

Video Aids Available (Coning and Threading DVD):
Part Number: P-9930-D

Tube Size Inches (mm)	Collet Only (set)	Cutters Only (set)	Die Chasers (set)	Complete Set

Oil / Chip Guard

A threading die oil/chip guard is now standard on our AEGCTM machines. This guard prevents oil and metal chips from being ejected onto the operator.

The guard is a swing away Plexiglass design providing protection from splashing oil or thrown chips while allowing full access to the die head.

A retrofit guard option is available to upgrade machines already in operation (-2 models). The kit will contain all required items along with instructions.

Example:

AEGCTM-2GK (Retrofit kit catalog number)

Coning & Threading Machine Operation

Note:

Detailed Operational Instructions are supplied with the machine in two forms, printed or USB jump drive. Refer to these instructions for tooling installation, machine adjustment, and maintenance instructions. Download from our website at www.Autoclave.com.

Installation: QSS Manual/Wrench Assembly Instructions (Sizes: 1/4" to 3/8" only)

Step 1:

Cut tubing to length and deburr. Allow extra length for proper engagement (per table below).

Outside Diameter Tube Size inches (mm)	Extra Allowance for Engagement** inches (mm)
1/4" (6.35)	0.75 (19.05)
3/8" (9.53)	0.81 (20.64)

Step 2:

Slip gland nut and sleeve onto tubing.

Note: Be sure to remove gland and sleeve from components and slide them onto the tubing before inserting the tubing into the components.

Make sure larger end of sleeve is toward gland.

Push tubing into valve or fitting until it bottoms. If process tolerable, a slight amount of inert grease on the nose of the compression sleeve is recommended to improve sealability. Lubrication of the gland threads will also aid in assembly.

Step 3:

Rotate Gland Nut "finger-tight" and then a bit more with wrench until Sleeve begins to Grip Tubing (wrench-tight).

Step 4:

Note starting position of wrench.[†] Starting now at the "wrench-tight" position, turn 1-1/4 turns to complete the QSS connection.*

Completed Connection

The illustration below shows the condition of sleeve and tubing after completion of "sleeve setting." The sleeve has cut into the tubing as it moved forward into the tapered seat, upsetting material ahead of it and establishing a shoulder on the tubing to provide positive mechanical support for the tubing end-load. A properly set sleeve cannot be displaced back and forth along the tubing but may be rotated around the tubing.

Bite into tubing exaggerated for clarity

Reassembly and Adapter/Plug Connection

To reassemble a connection, insert tubing with sleeve and gland nut into valve or fitting, finger tight. Rotate to "wrench-tight" position and then 1/4 turn more for gas-tight seal or use Torque Chart in Step 6 on next page. Male Adapters and Plugs do not require same torque to seal, see chart below:

QSS Male Adapter or Plug Torque	
Size	Torque
1/4"	10 ft-lbs
3/8"	20 ft-lbs
9/16"	45 ft-lbs
3/4"	100 ft-lbs
1"	225 ft-lbs

Notes:

** Distance tubing protrudes into connection from face of fitting.

[†] A small blind hole on the face of the gland is provided for a starting position reference.

Parker Autoclave Engineers Medium Pressure tubing is required for these connection components.

When assembling tubing into fittings such as in rack systems, alignment of tubing is critical in connection port make up. Do not force tubing into alignment with connections as bending stress will effect the sealing capability of the connections.

Installation: QSS Hydraulic Preset Instructions (Sizes: 1/4" to 3/4")

Step 1:

Cut tubing to length and deburr. Allow extra length for proper engagement (per table below).

Outside Diameter Tube Size inches (mm)	Extra Allowance for Engagement** inches (mm)
1/4" (6.35)	0.75 (19.05)
3/8" (9.53)	0.81 (20.64)
9/16" (14.27)	1.25 (31.75)
3/4" (19.04)	1.63 (41.28)
*1" (25.40)	1.75 (44.455)

** Distance tubing protrudes into connection from face of fitting.

Step 2:

Slip gland nut and sleeve onto tubing. Lubricate the nose of the compression sleeve or the tapered die surface with a moly-based metal to metal lubricant. We recommend Jetlube MP-50. Make sure larger end of sleeve is toward gland nut. Push tubing into hydraulic set tool until it bottoms into the setting die.

Step 3:

Thread gland nut into cap until the hex touches the top surface.

Step 4:

Pressurize cylinder up to the set pressure (per table below.)

**DO NOT EXCEED THE SET PRESSURE IN CHART BELOW.
AS WITH ALL HIGH PRESSURE EQUIPMENT, USE CAUTION
DURING OPERATION. SET TOOL MAWP IS 10,000 PSI (690 BAR)**

Outside Diameter Tube Size inches (mm)	Set Pressure for Full Tubing Bite inches (mm)
1/4" (6.4) and 3/8" (9.5)	4500 (310) to 5000 (344)
9/16" (14.3)	9000 (620) to 10000 (690)
3/4" (19.0)	8000 (552) to 10000 (690)
*1" (25.4)	9000 (620) to 9500 (655)

Vent all pressure from hydraulic cylinder. Remove gland assembly from preset tool and inspect biting end of sleeve. Looking inside the biting end of the sleeve you should see a shoulder pushed up from the tubing material. A properly set sleeve must spin freely to achieve a seal. If the sleeve is seized in place after setting, discard and make another.

Do not set a sleeve more than once.

Step 5:

Install gland assembly into valve/fitting. If process tolerable, a slight amount of inert grease on the nose of the compression sleeve should be used to aid sealing. Lubrication of gland threads will also aid in assembly. Turn to "Wrench-Tight" position where torque to turn increases dramatically.

Step 6:

Note starting position of wrench.† Tighten gland nut 1/4 turn to complete the QSS connection. Since the mechanical bite has already been completed with the hydraulic set tool, it is permissible to vary the torque to achieve sealing.

Size (in)	Required Torque ft.-lbs. (Nm)	Max. Torque ft.-lbs. (Nm)	Torque Wrench Adapter Size	Wrench Adapter Part #
1/4"	30 (40)	50 (70)	5/8"	AE003321
3/8"	35 (50)	75 (100)	3/4"	AE003322
9/16"	90 (120)	175 (240)	1-3/16"	AE003324
3/4"	175 (240)	325 (440)	1-1/2"	AE000170
*1"	375 (500)	635 (860)	1-3/4"	AE001067

Not for use with Male Adapters or Plugs (see chart on previous page)

† A small blind hole on the face of the gland is provided for a starting position reference.

Completed Connection

The hydraulically set sleeve has cut into the tubing as it moved forward into the tapered seat, upsetting material ahead of it and establishing a shoulder on the tubing to provide positive mechanical support for the tubing end-load. A properly set sleeve cannot be displaced back and forth along the tubing but may be rotated around the tubing.

Installation: QSS Hydraulic Preset (HST-912) Instructions & Overview

Reassembly & Adapter/Plug Connection

To reassemble a connection, insert tubing with sleeve and gland nut into valve or fitting, finger tight. Rotate to “wrench-tight” position, then 1/4 turn more for gas-tight seal or use torque chart shown in Step 6 on page 13. Male Adapters and Plugs do not require same torque to seal, see chart on page 12.

Parker Autoclave Engineers Medium Pressure tubing is required for these connection components.

When assembling tubing into fittings such as in rack systems, alignment of tubing is critical in connection make up.

Do not force into alignment with connections as bending stress will effect the sealing capability of the connections.

Hydraulic Sleeve Set Tool (HST-912)

The hydraulic set tool requires minimal assembly and is easy to use. There are three models available; a manual hydraulic pump, an air operated hydraulic pump and a complete stand mounted system with air pumps and tooling for all five connection sizes.

The HST-912 Parker Autoclave hydraulic sleeve set tool is designed for use with the QS Series glands, sleeves and Parker Autoclave tubing. This tool is required to set the sleeve for the 9/16" and 3/4" sizes and recommended for the 1/4" and 3/8" sizes. It not only produces the required bite into the tubing, it is much easier than trying to set the sleeve the conventional method. The tool comes in a self contained portable, lockable case complete with hand or air pump, cap and dies for all sizes up to 3/4".

HST-912 Specifications

Hand Pump: Single stage hydraulic (standard)

Hydraulic Cylinder: 10,000 psi, 2.5" 25 ton

Base & Housing: Aluminum anodized

Die and Cap: Precision hardened steel

Gauge: 15,000 psi (1034 bar)

Operating Pressure: 0 to 10,000 psi (0 to 690 bar).

Required Air Pressure: 30 psi (2.1 bar) minimum 120 psi (8.3 bar) maximum

Reservoir Capacity: 24 cu. in. (393cm³)

Air lubricator/air separator is recommended for air operated units.

HST-912 Bill of Materials	Part Number
Hydraulic Cylinder	90588
Gauge	90594
Adapter	90593
Housing	101F-3408

1-1/2" Crows Foot Wrench Adpt, 3/4" Drive	AE000170
1-3/4" Crows Foot Wrench Adpt, 3/4" Drive	AE001067
Adjustable Spanner Wrench	P-1970

Ordering Information

HST-912:

Complete tool kit with hand pump (Sizes 1/4" to 3/4")

HST-912TW:

Complete tool kit as above with torque wrench and adapters

HST-912A:

Complete tool kit as above with air-operated, foot activated pump (Air Operated Pump #P-1948)

HST-912ATW:

HST-912A tool kit with torque wrench and adapters

HST-S:

Complete Double Air-Drive Press Stand System with dies, torque wrenches and tooling for all tubing sizes including 1".

! CAUTION !

Do not operate Hydraulic Cylinder without setting sleeve and tube as this may result in damage to the die housing!

Installation: QSS Hydraulic Preset (HST-912) Instructions

HST-912 Cap and Die Changeout Instructions

To switch tooling to another size only requires interchanging two (2) parts.

1. Using a 5/32" Allen Wrench, loosen the 5/16" set screw that locks the threaded cap from rotating.
2. Use the included spanner wrench to rotate and remove the threaded steel cap from aluminum housing.
3. Turn the tool assembly upside down the remove the die from inside the housing.
4. Install the die of the appropriate connection size you wish to use. The solid side of the die should be facing down towards the hydraulic cylinder.
5. Install the appropriate size cap to match the size of the die. Insert cap with the spanner holes facing up. Rotate the cap with the spanner wrench until it bottoms out on the shoulder side of the housing.
6. Thread in the 5/16" set screw until it bottoms out on the cap threads. Tighten set screw to prevent movement during use.

Heavy Duty Torque Wrenches and Heavy Duty Crows Foot Wrench Adapters

Recommended for use with Parker Autoclave Quick Set System (QSS) and Flared Cone Connection (FCC) Fittings and Valves. (will work with standard products)

Torque Wrench	Torque Range
AE003325	10 to 150 ft. lbs (10 to 203 Nm), 1/2" Drive
AE003326	75 to 250 ft. lbs (102 to 339 Nm), 1/2" Drive
AE003327	100 to 600 ft. lbs (136 to 814 Nm), 3/4" Drive

Heavy Duty Torque Wrench Adapters		
Wrench Adapter Number	Packing Gland or Tube Nut Hex Size (inches)	
AE005904	1/2" x 1/2"	
AE005905	9/16" x 1/2"	
AE003321	5/8" x 1/2"	
AE003322	3/4" x 1/2"	
AE005906	13/16" x 1/2"	
AE005907	7/8" x 1/2"	
AE003323	15/16" x 1/2"	
AE005908	1" x 1/2"	
AE005909	1-1/16" x 1/2"	
AE003324	1-3/16" x 1/2"	
AE005910	1-3/8" x 1/2"	
AE000170	1-1/2" x 3/4"	
AE001067	1-3/4" x 3/4"	
AE005911	1-7/8" x 3/4"	
AE003826	2" x 3/4"	
AE000171	2-3/4" x 3/4"	
AE005590	1/2" Drive to 3/4" Drive Adapter	

Standard Duty Torque Wrenches (old style) can be found on page 16

Operation/Maintenance: Torque Values

Medium & High Pressure Connection, Valve Packing, Running and Seating

Parker Autoclave Engineers Micrometer Adjustable Torque Wrenches

Torque Wrench	Torque Range
P-1680	20 to 150 ft. lbs (27 to 203 Nm)
91020	75 to 250 ft. lbs (102 to 339 Nm)
See Heavy Duty Torque Wrenches on Page 15	100 to 600 ft. lbs (136 to 814 Nm)

Accurate tightening for all Parker Autoclave Engineers valve packing glands and tube nuts is essential. The wrench can be adjusted to the ranges shown above and is used with interchangeable wrench adapters for hex sizes from 1/2" through 1-7/8". Part numbers for wrench adapters are listed below.

Wrench adapters sold separately.

Standard Wrench Adapters		
Wrench Adapter Number	Packing Gland or Tube Nut Hex Size (inches)	
P-1681	1/2	
P-1682	9/16	
P-1683	5/8	
P-9813	3/4	
P-1685	13/16	
P-1686	7/8	
P-1687	15/16

	F375C (3/8" UHP-100K)	3/4	105 (143)	-	100,000
	F562C (9/16" UHP-100K)	1-3/16	125 (170)	-	100,000
	F375C (5/16" UHP-150K)	3/4	70 (95)	-	150,000

¹ Required torque shown is for manually lubricated (liquid or paste anti-seize) glands. For torque reduction when using glands supplied with Dry-Moly coating see "Reduced Pressure/Special Material" Chart on next page.

For torques at lower working pressures (specialty materials) see "Special Material" Torque Chart on next page.

Operation/Maintenance: Torque Values

Reduced Pressure/Special Material Torque Table: Pressure psi (bar) vs. Torque ft.-lbs. (N.m)

Note: ALL Parker Autoclave Engineers Pressure Containing products will have Maximum Allowable Working Pressure (@ Room Temperature) indelibly marked at an easy to read location. Most "Special Materials" are rated to a pressure less than our standard Cold Worked UNS S31600/S31603 316/316L Stainless Steel Material and use of the chart below is necessary for proper installation of Cone & Thread Connections at these lower pressures.

Use of this chart is also recommended when application pressure is less than the MAWP rating on the part. This will create a seal circle in the connection at a point before max insertion depth is reached - enhancing the lifetime of the product.

Connection	Pressure psi (bar) vs. Torque ft-lb (N.m)										** Dry-Moly Coat Torque Reduction
	Minimum	5,000 (345)	10,000 (690)	15,000 (1034)	20,000 (1379)	25,000 (1724)	30,000 (2068)	40,000 (2758)	50,000 (3447)	60,000 (4137)

* These are not specifications.

Note: All valve stem torques are based on standard PTFE packing.
For valves with option "TG" (PTFE Glass) or "GY" (graphite, yarn packing), the following equations should be used to estimate torques.

Option "TG"

Running Torque = Running Torque (x 1.1)

Seating Torque = Running Torque (x 1.1) + Seating Torque - Running Torque

Option "GY"

Running Torque = Running Torque (x 2)

Seating Torque = Running Torque (x 2) + Seating Torque - Running Torque

Note:

All dimensions are shown for reference only and should not be considered as actual machining dimensions.

All threads are manufactured using Unified Thread Form - Class 2A or 2B fit.

Installation: Anti-Vibration Collet Gland/Reseating Tools & Instructions

Assembly Procedures

Anti-vibration collet gland assembly replaces the standard gland nut.

1. Cone and thread tubing as defined on pages 6-9.
2. Slide collet assembly onto tube and install collar as described in the assembly and makeup of connections on page 8. One or two threads should be exposed between the collar and cone.
3. Lubricate male threads on glands (medium pressure anti-vibration assemblies supplied with a baked on dry film lubricant. Lubrication not required.)
4. Tighten collet body (elongated gland) to specified torque on page 16-17. The high pressure collet will grip the tube when the connection gland is tightened.
5. For the medium pressure collet gland assembly, hand tighten the collet gland in place and further tighten 1-1/4 turns with a wrench. When tightening the medium pressure anti-vibe collet nut, hold the collet body with a wrench to prevent the body from turning and over tightening. This will lock the collet against the tube. For subsequent retightening of the medium pressure anti-vibration collet gland, use 3/4 turns past finger tight.

Medium & High Pressure Antivibration Gland Assemblies

Note: Always use a back-up wrench on collet body to prevent over tightening of collet body into connection.

See individual Cone & Thread Fitting Brochures for additional information and ordering details.

Reseating Tool

For female TUBING CONNECTION cone seat

1. Clamp fitting in soft-jawed vise.
2. Thread gland nut into connection and tighten to 10 ft. lbs. (13.6 N.m).
3. Apply a medium weight high sulfur cutting oil generously through opening in nut. Cutting oil P-8784.
4. Insert reamer through guide bushing and press down firmly while rotating clockwise approximately two full turns, relieving pressure gradually toward end of second turn.
5. Remove reamer, guide nut and bushing and inspect cone seat.
6. Repeat steps 2,3,4 and 5, if necessary, until cone surface has been restored and finish is smooth.
7. Clean fitting thoroughly to remove all chips and residue.

Operation: Hydraulic Tube Bender (HTB)

Required Air Pressure: 30 psi (2.1 bar) minimum 120 psi (8.3 bar) maximum.

Reservoir Capacity: 24 cu. in. (393cm³).

Available with optional hydraulic pressure gauge and gauge adapter. A lubricator/air separator is recommended for air operated units.

201A-6020	1 (25.4)	.562 (14.27)	20,000 (13794)	4.62 (117.3)	22 (55.8)
201A-6020	1 (25.4)	.688 (17.48)	15,000 (1034)	4.62 (117.3)	22 (55.8)

Annealed Parker Autoclave Engineers pressure tubing may also be bent on HTB tube bender using bending shoe sizes specified above.

* HTB bending shoes are constructed of heat-treated aluminum alloy and designed specifically for use with Parker Autoclave Engineers' heavy wall stainless tubing. They are not intended for bending such components as commercial pipe. Because of diameter differences, such misuse could fracture the bending shoe.

** Information on bending 150,000 psi (10342 bar) tubing is included here for reference only. This tubing should not be bent on HTB hydraulic tube bender because of the 6" required minimum radius.

†† Pressure rating of the bent tube will be reduced. Consult the Technical Application section for pressure rating at various bend radii, or contact Technical Help department with tube OD, ID, and Bend Radius for assistance (IPDAETechnical@parker.com)

All dimensions for reference only and subject to change.

Single Pass Bending: High Pressure Tubing

The Parker Autoclave Engineers hydraulic tube bender is designed for 1/4" to 1" heavy wall tubing and provide fast, accurate and reliable bending with only one setup. The tube bender is complete with pump, cylinder, frame and bending shoes which are self contained in a portable, lockable case.

(Order number: **HTB**)

HTB Features:

Dimensions: 27.5"W x 14.0"H x 14.0"D
69.9cm x 35.6cm x 35.6cm).

Weight: 55 lbs. (29.9 Kg)

Single-stage hydraulic hand pump (standard)

Ram retractor valve relieves system pressure after bending. The spring loaded ram retracts for easy removal of tubing after bending is completed.

Quick release pivot pins lock and unlock easily for tube removal.

One-piece shoe locking pin locks bending shoe securely but allows for quick release to interchange shoes.

Rugged bending frame is lightweight, aircraft quality, aluminum alloy.

Precision one-piece bending shoes are permanent mold, heat-treated, aircraft quality, aluminum alloy.

Air-operated hydraulic pump option can be furnished in place of standard hand pump. (Add "-A" to order number) Operating pressure 0 to 10,000 psi (0 to 690 bar).

Maintenance: Lubrication Guide

General Information

For reliable operation and long life of hand valves, air valves, relief valves, check valves and safety heads, Parker Autoclave Engineers strongly recommends proper lubrication of all components that are subject to friction during assembly and /or operation. This is especially important where metal to metal contact occurs such as on connection gland threads, packing gland threads and stem threads. Without proper lubrication, the high loads imposed on these threads may cause the parts to weld (or gall) together from the high metal to metal contact forces and friction heat. Lubrication is also essential for the effective sealing and long life of o-rings, especially those that are used in dynamic sealing applications. The performance of metal to metal seals will be improved with lubrication but, they do not absolutely require it.

Lubricant selection is strongly dependent on the application of the given component. Process fluids, fluid temperature, ambient environment temperature, materials and other factors are important in selecting a lubricant. This manual gives some basic guidelines in the proper selection and application of lubricants. The end user must ultimately determine the suitability of a lubricant based on process requirements.

Note: Parker Autoclave Engineers assumes no liability in selecting lubricant for customer applications.

Lubrication Sites

1. Speedbite, Medium Pressure and High Pressure Connections in all valves and fittings - Prior to assembly, the connection gland should be lubricated on the threads and on the area that is in contact with the sleeve or collar. Parker AE provides as standard a dry molybdenum disulfide lubricant on Speedbite glands unless specified otherwise. If process tolerable, a small amount of any lubricant (or process fluid) on the end of the tube cone or connection sleeve will help to maximize the metal-to-metal sealing process. This inherently provides for better sealing of gases.

2. Hand Valves - Ideally, the non-rotating stem should be lubricated along the shank that fits into the threaded stem sleeve as well as on the surfaces that are in contact with the stem washers. The threaded stem sleeve should be lubricated on the stem threads and at the ends (see Figure 1). The packing gland should be lubricated on the external threads and on the end that is in contact with the packing washer. For valves with replaceable seats,

the external threads on the seat retainer and the portion of the seat retainer in contact with the seat should be lubricated.

Figure 1
Hand Valve Lubrication Sites

3. Air Valves - The packing gland and seat retainer (if the valve has a replaceable seat) should be lubricated in the same manner as the hand valve. Threads should also be lubricated on all of the yoke screws (for yoke style valves) and on the retainer insert (on other air operated valves).

For piston type air operators, o-ring lubricant should be applied to the inside of the operator housing, on the center rod and on all the o-rings, on the pistons and divide plates.

4. Check Valves - The gland nut should be lubricated on the external threads and at the end where it contacts the cover. The cover should be lubricated at the sealing surface where it contacts the body. For o-ring check valves, a small amount of o-ring lubricant on the o-ring will help swell the elastomer and aid sealing. Refer to Figure 3 for lubrication sites on check valves.

Maintenance: Lubrication Guide

Figure 2
Air Valve Lubrication Sites

Figure 4
Relief Valve Lubrication Sites

Figure 3
Check Valve Lubrication Sites

Figure 5
Safety Head and 2-Piece Male/Female Adapter
Lubrication Sites

5. **Relief Valves** - Threads should be lubricated on the cap, spring cylinder, adjustment bolt and on the seat gland. Refer to Figure 4 for lubrication sites on the relief valve.

6. **Safety Heads/2-Piece Male/Female Adapters** - The threads and end of the hold down nut in Safety Head should be lubricated. Refer to Figure 5 for lubrication sites on the safety head.

Maintenance: Lubrication Guide

Parts that will move against each other during assembly or operation should be lubricated at the points/areas of contact.

Recommended Lubricants

Note: This information is provided for reference only. The manufacture of the lubricant should be contacted for specific information based on your application. Refer to the material safety data sheets for information on safe usage and storage methods for these lubricants.

1. Jet Lube SS-30™ - This lubricant consists of pure copper flakes that are homogenized into a non-melting, nonvolatile viscous carrier. It is fortified with anti-oxidants, rust and corrosion inhibitors. Jet Lube SS-30 is the standard lubricant for Parker Autoclave VFT components with sliding metal to metal contact surfaces. The surfaces are copper coated and prevents seizure, galling and heat freeze. SS-30 comes in the form of a thick oil that can be easily brushed on the surfaces to be lubricated. The absolute service temperature range is from -65° to 1800°F (-55 to 982°C). Jet Lube SS-30 is not recommended for extreme low temperature applications or processes that will not tolerate the presence of copper.

2. Jet Lube MP-50 Moly Paste - This is a thick paste that contains molybdenum disulfide (MoS₂). This lubricant is suitable for preventing seizure and galling of parts at absolute temperatures of -300 to 750°F (-184 to 399°C). It is recommended for metal to metal components that are exposed to temperatures of less than 0°F. Other lubricants may solidify under these conditions and prevent the effective operation of dynamic components.

3. DuPont Krytox 240AC - Krytox is a non-flammable fluorinated grease used for metal to metal lubrication in valves that are cleaned and designated for oxygen service. It comes in the form of a white grease and has a recommended absolute service temperature range of -15 to 500°F (-26.1 to 260°C).

4. Molykote® 55 O-ring Grease (See also DC 111) (Dow Corning) - This grease is used for static lubrication between rubber and metal parts in actuators, ball valves and o-ring check valves. It is a silicone based lubricant and meets Military Specifications MIL-G-4343. It is not recommended for use on silicone rubber o-rings and seals. It has a recommended absolute service temperature range of -85 to 350°F (-65 to 177°C).

5. Neolube DAG 156 - This is a dry film lubricant for valves used in Navy Nuclear service. It consists of graphite particles in a thermoplastic resin and isopropanol and meets Military Specification MIL-L-24131B. The dry film form allows tight control of impurities that are required for these applications. It has an absolute service temperature of -100 to 400°F.

6. Lubriplate Pure Tac, NSF H-1 Registered, Extremely Tacky, Food Grade Greases - This grease is used for dynamic lubrication between rubber and metal parts in pneumatic systems such as piston style air operators. A tacky, adhesive, highly water resistant grease for medium to slow dynamic speeds. It has a recommended absolute service temperature range of 0 to 350°F (-17.8 to 177°C).

7. Klueber Lube - ISOFLEX TOPAS NB 52 - Synthetic Plain and Roller Bearing Grease - This grease is used on all of our Air-Driven ASL, ACHL, AFL and AHL Liquid Pumps and is based on a synthetic hydrocarbon oil and barium complex soap. The special barium-soap thickener used offers good load-carrying capacity as well as resistance to water and ambient media. Shows good protection against corrosion as well as oxidation and ageing stability. ISOFLEX TOPAS NB 52 can be used in a wide service temperature range from -58° to 250°F (-50° to 120°C).

Maintenance: Lubrication Guide

Lubrication Selection Guide

Lubrication	Part Number	Application	Absolute Service Temperature Range
Jet-Lube SS-30	P-3580 (1 lb.) P-3580-8 (8 oz.)	Metal to Metal, Standard	-65°F to 1800°F (-18°C to 982°C)

General Information:

For reliable operation and long life of hand valves, air valves, relief valves, check valves and safety heads, Autoclave Engineers strongly recommends proper lubrication of all components that are subject to friction during assembly and /or operation. This is especially important where metal to metal contact occurs such as on connection gland threads, packing gland threads and stem threads. Without proper lubrication, the high loads imposed on these threads may cause the parts to weld (or gall) together from the high metal to metal contact forces and friction heat. Lubrication is also essential for the effective sealing and long life of o-rings, especially those that are used in dynamic sealing applications. The performance of metal to metal seals will be improved with lubrication but, they do not absolutely require it.

Lubricant selection is strongly dependent on the application of the given component. Process fluids, fluid temperature, ambient environment temperature, materials and other factors are important in selecting a lubricant. This manual gives some basic guidelines in the proper selection and application of lubricants. The end user must ultimately determine the suitability of a lubricant based on process requirements.

Note: Parker Autoclave Engineers assumes no liability in selecting lubricant for customer applications. Parker Autoclave Engineers reserves the right to alter the specifications given in this publication in line with our policy of continuous improvement. All general terms and conditions of sale, including limitations of our liability, apply to all products and services sold.

Caution: While testing has shown o-rings to provide satisfactory service life, both cyclic and shelf life may vary widely with differing service conditions, properties of reactants, pressure and temperature cycling, and age of the o-ring. Frequent inspection should be made to detect any deterioration and o-rings replaced as required.

Lubrication Sites:

1. Speedbite, Slimline and High Pressure Connections in all valves and fittings

Prior to assembly, the connection gland should be lubricated on the threads and on the area that is in contact with the sleeve or collar. AE provides as standard a dry molybdenum disulfide lubricant on Speedbite glands unless specified otherwise. If process tolerable, a small amount of any lubricant (or process fluid) on the end of the tube cone or connection sleeve will help to maximize the metal-to-metal sealing process. This inherently provides for better sealing of gases.

2. Hand Valves

Ideally, the non-rotating stem should be lubricated along the shank that fits into the threaded stem sleeve as well as on the surfaces that are in contact with the stem washers. The threaded stem sleeve should be lubricated on the stem threads and at the ends (**see Figure 1**). The packing gland should be lubricated on the external threads and on the end that is in contact with the packing washer.

For valves with replacement seats, the external threads on the seat retainer and the portion of the seat retainer in contact with the seat should be lubricated.

Figure 1
Hand Valve Lubrication Sites

3. Air Valves

The packing gland and seat retainer (if the valve has a replaceable seat) should be lubricated in the same manner as the hand valve. Threads should also be lubricated on all of the yoke screws (for yoke style valves) and on the retainer insert (on other air operated valves). For piston type air operators, o-ring lubricant should be applied to the inside of the operator housing, on the center rod and on all the o-rings, on the pistons and divider plates. On air-to-open diaphragm operators, the o-ring on the stem should be lubricated. The threads and end of the spring adjustment screw should be lubricated on all air-to-open valves. Refer to **Figure 2** for lubrication sites on piston style operators.

4. Check Valves

The gland nut should be lubricated on the external threads and at the end where it contacts the cover. The cover should be lubricated at the sealing surface where it contacts the body. For o-ring check valves, a small amount of o-ring lubricant on the o-ring will help swell the elastomer and aid sealing. Refer to **Figure 3** for lubrication sites on check valves.

5. Relief Valves

Threads should be lubricated on the cap, spring cylinder, adjustment bolt and on the seat gland. Refer to **Figure 4** for lubrication sites on the relief valve.

6. Safety Heads

The threads and end of the hold down nut should be lubricated. Refer to **Figure 5** for lubrication sites on the safety head.

For any part not covered in the above statements, the general rule is that parts that will move against each other during assembly or operation should be lubricated at the points/areas of contact.

Recommended Lubricants:

Note: This information is provided for reference only. The manufacture of the lubricant should be contacted for specific information based on your application. Refer to the material safety data sheets for information on safe usage and storage methods for these lubricants.

1. DuPont Krytox 240AC2

Krytox is a non-flammable fluorinated grease used for metal to metallubrication in valves that are cleaned and designated for oxygen service. It comes in the form of a white grease and has a recommended absolute service temperature range of -15 to 500°F.

2. Hallocarbon 25-5S

This is a silica thickened chlorotrifluorethylene grease that is recommended for use on check valve balls and o-rings. *It is not recommended for use on magnesium and aluminum alloys and in contact with sodium potassium, amines, liquid flurine and liquid chlorine trifluoride.* It has a recommended absolute service temperature range of 0 to 350°F.

3. Neolube DAG 1563

This is a dry film lubricant for valves used in Navy Nuclear service. It consists of graphite particles in a thermoplastic resin and isopropanol and meets Military Specification MIL-L-24131B. The dry film form allows tight control of impurities that are required for these applications. It has an absolute service temperature of -100 to 400°F.

4. Dow Corning Molycoat 55M4

This grease is used for dynamic lubrication between rubber and metal parts in pneumatic systems such as piston style air operators. It is a silicone based lubricant and meets Military Specifications MIL-G-4343. *It is not recommended for use on silicone rubber o-rings and seals.* It has a recommended absolute service temperature range of -85 to 350°F.

5. Jet Lube SS-301

This lubricant consists of pure copper flakes that are homogenized into a non-melting, nonvolatile viscous carrier. It is fortified with anti-oxidants, rust and corrosion inhibitors. Jet Lube SS-30 is the standard lubricant for Parker Autoclave VFT components with sliding metal to metal contact surfaces. The surfaces are copper coated and prevents seizure, galling and heat freeze. SS-30 comes in the form of a thick oil that can be easily brushed on the surfaces to be lubricated. The absolute service temperature range is form 0 to 1800°F. *Jet Lube SS-30 is not recommended for extreme low temperature applications or processes that will not tolerate the presence of copper.*

2. Jet Lube MP-50 Moly Paste1

This is a thick paste that contains molybdenum disulfide (MoS). This lubricant is suitable for preventing seizure and galling of parts at absolute temperatures of -300°F to 750°F. It is recommended for metal to metal components that are exposed to temperatures of less than 0°F. Other lubricants may solidify under these conditions and prevent the effective operation of dynamic components.

WARNING

FAILURE, IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met. The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

technical information

Note: New Technical Information Section coming soon.

Technical Information

The information presented in this section is intended to assist designers in the proper selection of Parker Autoclave Engineers' valves, fittings and tubing for fluid handling systems. This technical data does not represent product specifications but rather guidelines for direction in the proper application of the referenced equipment. These guidelines are general in nature because of the many process variables.

For severe service applications, selection of the appropriate valves, fittings and tubing is essential in order to optimize the service life of these products. Parker Autoclave Engineers' technical staff is available to assist in the interpretation of this information.

www.autoclave.com

Materials:

Widely varying conditions frequently require that valves, fittings and tubing be constructed of materials other than conventional stainless steel. Since many variables affect the corrosion resistance of metallic materials, it is Parker Autoclave Engineers' policy not to recommend materials based on corrosion resistance for specific fluid applications. We can, however, suggest materials based on mechanical strength and also indicate materials generally used in a specific application. Other materials not listed in this section are also available.

Pressure:

Included in this section are the standard pressure ratings for several common materials for valves and fittings as well as tubing. Parker Autoclave Engineers stocks a select quantity of special material tubing for immediate delivery.

Temperature:

Also contained in this section are pressure reduction factors at various temperatures for several materials. To obtain the maximum pressure rating at an elevated temperature, multiply the maximum pressure rating of the item at room temperature by the elevated temperature factor (% of RT).

High and low temperatures or high heat up and/or cool down rates can affect the capability of a metal-to-metal seal. When selecting a valve series, consideration should not only be given to static pressure rating, but also static and dynamic temperature conditions. Generally, the smaller the seal diameter of a metal-to-metal seal, the more reliable the seal will be.

Gas or Liquid Service:

Light gases such as hydrogen and helium are more difficult to seal than liquids. When selecting a valve series, consideration should be given to the fluid application and not just pressure and temperature requirements. The higher the rating of the valve or fitting, the less the likelihood of weepage problems with light gases. Tubing selections should also consider the service requirements, since thicker wall, smaller outside diameter tube sizes will produce a more reliable connection seal. Handling of fittings and tubing during installation will make a difference in sealability of light gases as well as liquids. Do not handle the tube or fitting in such a way as to damage the sealing surfaces. If it is process tolerable, a small amount of lubrication (or even process fluid) on the seal area during installation will help the sealing process. Refer to the Tools, Installation, Operation and Maintenance section for further information.

Valve Stem Packing Materials:

The considerations listed thus far should be applied when selecting a suitable valve stem packing material (PTFE, PTFE glass or Graphite yarn). Where possible, PTFE packing is the most reliable, low maintenance, packing choice; PTFE/glass is the second. While graphite yarn packing is a reliable pack-

ing material for the majority of extremely high temperature applications, some gases may permeate more readily through graphite yarn packing than through the PTFE packing in a valve with an extended stuffing box. The packing material must be kept below the maximum permitted temperature listed on page 5.

Valve Stem Seating:

Abrasive flow or high cycle service will require more frequent maintenance. Special materials and the proper valve series selection may extend service life. For example, if flow is not critical, a 30VM valve with an **N-Dura** stem will require less maintenance than an SW series valve used in a low pressure, high cycle, abrasive flow application. Although all application parameters cannot be considered in this section, the user can generally expect several thousand cycles in a liquid application and several hundred cycles for gas service. The packing gland may require adjustment, however, to achieve these results.

Pressure Cycling:

In medium and high pressure applications, static as well as dynamic (cyclic) pressure must be considered when selecting an appropriate valve series. If fatigue life is a concern, Parker Autoclave Engineers can supply tubing which has been autofrettagged for improved fatigue resistance. For internally pressurized tubing, **autofrettaging** is a method by which the inner wall of the tube is precompressed to reduce the tube operating bore stresses. By applying sufficient internal pressure, greater than the maximum working pressure of the tube, the inner wall is plastically deformed by a controlled amount. The remaining outer portion of the wall acts elastically, and when the pressure is released, a positive compressive load at the bore will exist. As mentioned previously, the result is reduced bore stress and increased fatigue life. In addition to the autofrettaging method to increase cycle life, Parker Autoclave Engineers offers HP-HC (high-pressure — high cycle) tubing, rated to 100,000 psi (6895 bar). This tubing can be substituted for our standard 60,000 psi (4137 bar) tubing providing longer life at 60,000 psi (4137 bar) operation.

Vacuum Service:

The high, medium and low pressure series of Parker Autoclave Engineers' standard valves, fittings and tubing can be used in light vacuum services to 10^{-2} torr. For high vacuums to 10^{-5} or 10^{-6} torr, Parker Autoclave Engineers' high pressure series is recommended. Extreme care and proper seal lubrication is required (as mentioned in the Gas or Liquid Service paragraph) to achieve these degrees of vacuum. The pump type and size will determine the final vacuum pressure.

Technical Information - Coned & Threaded Connections

Parker Autoclave Engineers Medium & High Pressure Coned and Threaded Connections

Parker Autoclave Engineers' Medium Pressure Coned and Threaded Connections

Features:

- Pressures to 20,000 psi (1379 bar)
- Uncompromised reliability under rigorous thermal and pressure cycling.
- Design is a more compact version of the original Parker Autoclave Engineers High Pressure connections.
- Well suited to installations which require repeated assembly and disassembly with consistent reliability.
- Available in tube outside diameter sizes from 1/4" (6.35 mm) through 1-1/2" (38.10 mm) and bore sizes from .109" (2.77 mm) to .938" (23.83 mm).

Note: 1" 43,000 psi (2965 bar) utilizes the medium pressure coned and threaded connection.

Differences in angles exaggerated for clarity.

Parker Autoclave Engineers' High Pressure Coned and Threaded Connections

Features:

- Pressures to 60,000 psi (4137 bar)
- Increased pressure handling capabilities
- Uncompromised reliability under rigorous thermal and pressure cycling
- Well suited to installations which require repeated assembly and disassembly with consistent reliability.
- Available in tube outside diameter sizes of 1/4" (6.35mm), 3/8" (9.53mm) and 9/16" (14.27mm) and bore sizes of .083(2.11mm), .125"(3.18mm), .188"(4.78mm) and .250"(6.35mm).

Differences in angles exaggerated for clarity.

Technical Information - Coned and Threaded Connections

Design Considerations - Why Coning and threading?

High-pressure designs require a superior joining technique for valves, fitting and tubing. Conventional joining methods fall short of the reliability needed for pressures above 10,000 - 15,000 psi (690-1034 bar) and tube sizes above 1/4" outside diameter. Dissimilar angles between the body and the tube cone provide line contact sealing along the perimeter of a contact circle. The sealing contact area is therefore, maintained at its practical minimum for the given tube size and a reliable seal is produced due to high sealing stresses that occur at low sealing loads. When process tolerable, a small amount of lubricant (or even process fluid) on the seal area will help improve the reliability of the metal to metal seals, especially when light molecule gases are to be sealed. The metal to metal seal also eliminates the need for elastomers in the connections.

Positive backup support occurs with the collar threaded (left-handed) directly onto the tubing to form a positive integral retaining surface. This allows for a consistent connection make up that is required at higher pressures and temperatures. When the gland nut is threaded into the connection, the tubing is locked securely in place and the possibility for the ejection of the tubing from a properly assembled and used connection is extremely remote.

Remarks:

Since the glands and threaded collars can be removed from the tubing, properly lubricated Parker Autoclave Engineers Medium-Pressure and High-Pressure connections can be disassembled and reassembled repeatedly without loss of reliability. These connections are used with cold-worked valve and fitting bodies which can withstand many repeated sealings. Therefore, valves, fittings and accessories can be inserted or removed from the pressure system or the system can be altered or expanded in a fraction of the time and cost that may be imposed by welded, screwed, flared or other types of connections.

Vacuum Service:

Parker Autoclave Engineers' Medium-Pressure connections can be reliably used in light vacuum service to 10^{-2} torr. Parker Autoclave Engineers' High-Pressure connections are recommended for vacuum to 10^{-5} torr. Extreme care and proper seal lubrication are required to successfully achieve these levels of vacuum.

Pressure Cycling:

Since the metal to metal seal is pre-torqued to a specified value greater than the end load generated from the pressure, fatigue concerns of the connection due to pressure cycling are minimal.

Thermal Cycling:

Because of the threaded on collar design, Parker Autoclave Engineers' Medium and High-Pressure connections can take repeated thermal cycling under pressure with no loss in reliability. These connections can also handle a wider range of temperatures than swaged or bite type connections and are designed to maintain integrity from -423°F to 1200°F (-252°C to 649°C).

Pre-Rated Systems:

Valves, fittings and tubing with Parker Autoclave Engineers' Medium and High-Pressure connections provide a fully engineered, pre-rated system of components that are interchangeable from assembly to assembly. They are not over sensitive to abuse or careless assembly and no special gauges or tools are needed to check the connection. Weep holes are provided in every connection to permit fast visual inspection for leakage, and prevent pressure build up in the threads.

Materials:

Parker Autoclave Engineers' standard gland and collar material is type 316 cold-worked stainless steel. This material provides high strength and good impact resistance over the temperature range mentioned above. A bonded dry film lubricant, to be used as an anti-galling agent, is available.

Pipe Thread Information

In some applications pipe threads may be preferred in place of standard Parker Autoclave Engineers connections. Pipe threads for pressure seals are tapered or combination of taper and straight. A number of factors apply to pipe threads for high-pressure sealing. Thread form or the quality of the thread, which refers to the gauging or thread dimensions. Another is the actual machining of the thread producing the required finish to prevent thread galling. Pipe threads can be used up to 15,000 psi (1034 bar) safely if proper installation procedures are followed. The following should be adhered to when using pipe threads.

NOTE: NPT (Pipe) connections

- NPT threads must be sealed using a high quality PTFE tape and/or PTFE paste product. Refer to thread sealant manufacturer's instructions on how to apply thread sealant.
- Sealing performance may vary based on many factors such as pressure, temperature, media, thread quality, thread material, proper thread engagement and proper use of thread sealant.
- Customer should limit the number of times an NPT fitting is assembled and disassembled because thread deformation during assembly will result in deteriorating seal quality over time. When using only PTFE tape, consider using thread lubrication to prevent galling of mating parts.

Temperature limitations for pipe threads are based on material strength and thread sealant. Parker Autoclave Engineers limits it's pipe thread components to 0°F (17.8°C) to 400°F (204°C) and pressures as stated in the components sections.

Technical Information - Pressure/Temperature Rating Guide

Pressure/temperature Rating Guide

Information in this rating guide is furnished to approximate the pressure/temperature capabilities of Parker Autoclave Engineers valves and fittings with various options.

To determine approximate ratings, the following factors should be considered:

- Refer to valve or fitting ordering pages for the base pressure rating of component at room temperature (R.T.).
- Refer to Technical Information section for pressure ratings of materials at elevated temperatures.

- Refer to appropriate tubing section for pressure ratings of standard Parker Autoclave Engineers' tubing at various temperatures to 800°F (427°C).

- Note maximum temperature ratings for Parker Autoclave Engineers' valves with various packing and stem options in table below.

- Note pressure/temperature curve on page 6 for type 316 stainless steel bodies and tubing.

- Note temperature information checklist on page 6.

Valve Series	Stem Type	Packing Temperature °F (°C)														Optional Extended Stuffing Box
		Standard PTFE Packing		Optional PTFE Glass -TG		Optional PTFE with Cryogenic Trim -B		Optional Graphite Yarn -GY		Standard Nylon-Leather		Optional Peek-PTFE Glass - TG		Optional Peek-PTFE with Cryogenic Trim -B

See Page 2 of Extreme Temperature Series Needle Valve for information on extended stuffing box.

Caution: While testing has shown O-rings to provide satisfactory service life, both cyclic and shelf life may vary widely with differing service conditions, properties of reactants, pressure and temperature cycling and age of the O-ring. FREQUENT INSPECTION SHOULD BE MADE to detect any deterioration, and O-rings replaced as required.

Note:

1. Optional graphite-yarn packing not recommended for hydrogen or helium service.
2. 40VM, 60VM and 60VRMM valves use Peak/PTFE/Peak for the PTFE glass option.

3. Compression sleeve-type connections such as Parker Autoclave Engineers' SpeedBite or other swaged or bite-type connections are not recommended for service above 650°F (343°C) or below 0°F (-17.8°C). For such applications, Parker Autoclave Engineers recommends its medium pressure components with Parker Autoclave Engineers Medium Pressure coned-and -threaded connections, offering excellent thermal cycling capability.

4. Pressure Limitations: Consult factory on 3/4 and 1 inch sizes.

Pressure/Temperature Rating Curve: 316 SS & 304 SS

Note:

Curves and ratings presented here are average values for reference only, and can be significantly affected by pressure and temperature characteristics of trim and packing materials. For unusual pressure/temperature requirements, please consult factory for recommended body, trim and packing specifications.

For pressure temperature information on components supplied in materials other than Type 316 stainless steel, refer to pages 9-10.

* Curve is valid for cold-worked Type 316 stainless steel components as long as operating temperature does not exceed 800°F (427°C). When exceeding this temperature, the cold worked effect is PERMANENTLY altered, and the components should be considered as annealed material, using 40% of its cold-worked rating for future operation of the components.

Technical Information - Pressure vs. Temperature Rating Curves

Maximum Coincident Metal Temperature

Maximum Coincident Metal Temperature

Maximum Coincident Metal Temperature

Curves and ratings presented here are average values for reference only and can be significantly affected by pressure and temperature characteristics of trim materials, stem packing materials (or o-rings), and connection type. Other options such as an extended stuffing box will be required to achieve the maximum temperature rating. See pages 5 and 6 for further temperature limitations. For unusual pressure/temperature requirements, please consult factory for recommended body, trim and packing specifications.

To obtain the maximum pressure rating at an elevated temperature, multiply the maximum pressure rating of the item (in special material) at room temperature, by the elevated temperature factor (% of RT).

Example: What would be the pressure rating of a 30VM 1/4 inch valve constructed of Titanium Grade 2 at 600°F (316°C)?

From the Material vs. Pressure rating chart on pages 7 & 8 for valves and fittings, the maximum pressure rating for a 30VM 1/4 inch valve constructed of Titanium Grade 2 would be 15,200 psi (1048 bar).

To determine the approximate pressure rating at 600°F (316°C), the Pressure vs. Temperature Rating Curves will be used. A vertical line on the x-axis (Temperature) is traced at 600°F (316°C) [on the Titanium Grade 2 graph], until it intersects the curve. A horizontal line is then drawn to the y-axis (% of rated pressure @ RT) and read as 30%. The room temperature rating of the Titanium Grade 2 valve is multiplied by the temperature reduction factor (.30) 15,200 psi (1048 bar) to approximate the temperature corrected pressure of 4,560 psi (314 bar).

See page 5 for further packing temperature limitations.

316/317 Material - see page 6.

Technical Information - Flow Calculations

Liquids & Gases

Coefficient of flow (C_v) for a valve is the volume of water, in U.S. gallons per minute at room temperature, which will flow through the valve with the stem fully open with a pressure drop of 1 psi (.069 bar) across the valve. C_v is the valve sizing factor that permits selection of the appropriate valve to meet flow requirements of a given fluid system

The flow capacity curves presented in the ordering pages for each series of Parker Autoclave Engineers valves show the C_v for all series, sizes and stem types per number of turns of the stem. These curves also illustrate the relative flow patterns for a vee on-off stem and a regulating stem.

The C_v values shown on the valve ordering pages represent the full-open C_v for that valve. In determining estimated capacity, this C_v value should be used in the formulas which follow.

Specific Gravity (Sg)
Typical Gases

Gas	Sg@RT Relative to Air
Acetylene	0.897
Air	1.000
Ammonia	0.587
Argon	1.377
Butane	2.070
Carbon Dioxide	1.516
Ethylene	0.967
Helium	0.138
Hydrogen	0.0695
Methane	0.553
Nitrogen	0.966
Oxygen	1.103
Propane	1.562
Sulphur Dioxide	2.208

Specific Gravity (Sg)
Typical Liquid

Liquid	Sg@RT Relative to Water
Acetone	0.792
Alcohol	0.792
Benzine	0.902
Gasoline	0.751
Gasoline, nat.	0.680
Kerosene	0.815
Pentane	0.624
Water	1.000

Flow Formulas

Liquids

Flow, U.S. gal./min.

$$V = \frac{C_v \sqrt{P_1 - P_2}}{\sqrt{S_{GF}}}$$

Flow, lb./hr.

$$V = 500 C_v \sqrt{(P_1 - P_2) / S_{GF}}$$

Gases

Flow, SCFH

$$Q = \frac{42.2 C_v \sqrt{(P_1 - P_2) (P_1 + P_2)}}{\sqrt{S_{GF}}}^{* \dagger}$$

Flow, SCFH (temperature corrected)

$$Q = \frac{963 C_v \sqrt{(P_1 - P_2) (P_1 + P_2)}}{\sqrt{S_g T_f}}^{\dagger}$$

Flow, lb./hr.

$$W = 3.22 C_v \sqrt{(P_1 - P_2) (P_1 + P_2) / S_g}^{\dagger}$$

Saturated Steam

Flow, lb./hr.

$$W = 2.1 C_v \sqrt{(P_1 - P_2) (P_1 + P_2)}^{\dagger}$$

Super Heated Steam

Flow, lb./hr.

$$W = \frac{2.1 C_v \sqrt{(P_1 - P_2) (P_1 + P_2)}}{(1 + 0.0007 T_s)}^{\dagger}$$

Formula Nomenclature

V = Flow, U.S. gallons per minute (GPM)

Q = Flow, standard cu.ft. per hr. (SCFH)

W = Flow, pounds per hour (lb./hr.)

P1 = Inlet pressure, psia (14.7 + psig)

P2 = Outlet pressure, psia (14.7 + psig)

Sgf = Liquid specific gravity (water = 1.0)

Sg = Gas specific gravity (air = 1.0)

Tf = Flowing temp., °R absolute (460 + °F)

Ts = Superheat in °F

Cv = Valve coefficient of flow, full open

* Effect of flowing temperatures on gas flow are minimal for temperatures between 30°F (-1.1°C) and 150°F (66°C). Correction should be included if temperatures are higher or lower.

† Where outlet pressure P_2 is equal to or less than 1/2 inlet pressure P_1 , the term:

$$\sqrt{(P_1 - P_2) (P_1 + P_2)} \text{ becomes } 0.87 P_1$$

Note: Maximum C_v values in this catalog have been determined in accordance with the Fluid Controls Institute report FC158-2. "Recommended Voluntary Standards for Measurement Procedure for Determining Control Valve Flow Capacity," including procedure, design of the test stand and evaluation of the data.

Technical Information - Liquid Flow Curves

Tubing

Theoretical Pressure Drop & Fluid Velocity vs. Flow, Parker Autoclave Engineers Medium and High Pressure Tubing. (Based on water @ RT)

Legend

—— Pressure drop $\Delta P = \text{psi/ft. (bar/m)}$
 - - - Velocity $V = \text{ft./s (m/s)}$

Note: Multiply pressure drop ($\Delta P/\text{ft}$) from graph above by factor 'C' to correct for system pressure above atmospheric. Higher system pressure increases the fluid density resulting in higher system pressure loss.

Instructions: To determine the expected pressure drop, per foot of tube length, select the appropriate curves based on tube Inside Diameter. Follow the graph vertically at the design flow rate (X-axis) until it intersects the solid line, then move horizontally to read the expected pressure drop per foot (Y-axis). Multiply this by the total tube length to obtain the

total pressure loss. See note below to correct for system pressures above atmospheric. To determine the average fluid velocity, repeat the above procedure, but use the dashed line. The pressure drop is for straight lengths of tube only.

Example: What would be the expected pressure drop and average fluid velocity at 1 gallon (4.4 liter) per minute of water through 100 feet (30.48 meters) of 3/8 outside diameter x .125 inside diameter tubing at 30,000 psi (2068 bar) will be used. This curve lists .125 inch (.317mm) inside diameter data.

From the x-axis (Flow "Q" GPM (LPM)) at 1 GPM (3.5 LPM) a vertical line is drawn until it intersects the solid line labeled ".125 (3.17mm)". A horizontal line is then traced to the y-axis (Pressure Drop/Unit Length) and is read 12 psi/ft. (2.71 bar/m).

Since the system pressure is 30,000 psi (2068 bar), a correction must be made to this value 12 psi/ft. (2.71 bar/m). The small graph in the lower left corner is used to determine this correction factor. A horizontal line on this graph is drawn from the y-axis System Pressure KSI (MPa) until it intersects the curve. It is then traced vertically to the x-axis (Compressibility Correction Factor 'C') and is read as 1.054.

To determine the total pressure drop, multiply the total tube length by the expected pressure drop per foot and by the correction factor 'C' (100) (12) (1.054) = 1,265 psi [(30.48m)(2.71 bar/m) (1.054)=87.10 bar].

The average fluid velocity is determined in a similar way except that on the original graph, the dashed line is used instead of the solid line. The average fluid velocity at 1 GPM (4.4 LPM) would be 25 ft/s (7.62 m/s). No correction needs to be made for elevated system pressures.

Introduction

Parker Autoclave Engineers has always been a large user of Air-over-Liquid pump technology and has a lifetime of experience using all variety of pumps in many different configurations. We have used this experience to develop a best-in-breed line of air-driven, high pressure pumps that are efficient to operate, simple in design, and will stand the test of time. Compared to other types of hydraulic pumps, they provide cost effective and energy saving benefits for many applications in the Oil and Gas, Chemical, Industrial and Research industries.

These pumps convert simple air pressure into high and ultra-high liquid pressures by utilizing a large area piston on the air side to move a small area plunger to compress the liquid into very high hydraulic pressures - as high as 60,000 psi (4137 bar). Some designs are for economy, some for manual use, some for low-flow & high pressure, some for high flow & medium pressure. Pumps like these are perfect for product testing, valve actuation, chemical injection and other applications that require intense pressure. When used in conjunction with a Hydraulic Intensifier (another PAE product) pressures to 150,000 psi (10,000 bar) are normal.

Parker Autoclave Engineers has been making pressure and corrosion test systems as well as high pressure laboratory reaction vessels for over 70 years.

Pump Series Models

ASL Series:

- Standard Liquid Pump
- Pressures up to 60,000 psi (4137 bar)
- 6 inches in diameter air piston
- Broad range of ratios
- Single and Double Piston

ACHL Series:

- ACL Series Pump with hand lever - Air or Manually Driven
- Pressures up to 31,900 psi (2199 bar)
- Precise Pressure control operation, pump is spring returned
- 3 inches in diameter air piston

AFL Series:

- High Flow, High Pressure
- Pressures up to 5,000 psi (1035 bar)
- Flow up to 6.8 gpm (25 lpm)
- Dual Acting

AHL Series:

- High Flow up to 7.6 gpm (29 lpm)
- Pressures up to 22,500 psi (917 bar)
- Approximately 10 inch diameter air piston
- Dual Acting

Pump Operation

Piston to Plunger Ratio

- Compressed air is used to produce hydraulic pressure
- Works on differential surface area between the large air piston and smaller hydraulic plunger
- Differential is represented by the pressure ratio of the pump

Pressure Ratio = Area of Air Piston ÷ Area of Hydraulic Plunger

- The higher the pressure ratio, the higher the output hydraulic pressure

Pressure Output = Pressure Ratio x Air Drive Pressure

- When air is applied to the pump it will cycle until the forces on the air piston equals the forces on the hydraulic plunger. This is the stall pressure.
- Pump will automatically restart if there is a drop in hydraulic pressure or an increase in air drive pressure.
- Double air pistons available which will double the pressure ratio because you have twice the air piston area acting on the same hydraulic plunger area.

Air Drive Section

- Compressed air is used to produce hydraulic pressure
- Works on differential surface area between the large air piston and smaller hydraulic plunger
- Differential is represented by the pressure ratio of the pump

Section 1

- Air pilot operated spool provides automatic cycling of air from one side of the piston to the other
- At the end of each stroke, the air piston activates a pilot valve that will cause the spool to shift

Section 2

- The spool shifting will supply air to one side of the piston while venting the other side of the piston
- This alternating action continues until the pump reaches its stall pressure

Typical Pump Cut-Away

	Description
A	Air Inlet
B	Top End Cap
C	Air Muffler
D	Air Cylinder
E	Bottom End Cap
F	High Pressure Outlet Connection
G	Outlet Check Valve
H	Pilot Valve

	Description
I	Air Piston Bumper
J	Air Piston
K	High Pressure Seal Assembly
L	Liquid Inlet Connection
M	Inlet Check Valve
N	Pump Head Body
O	Hydraulic Plunger

Pump Special Features & Benefits

- All Aluminum parts machined from high quality bar stock, not cast aluminum components
- Anodizing with special sealing technique to provide better protection from harsh environments
- Muffler specified to give a great combination of high flow and low noise
- Rubber bumpers in end caps to reduce noise of operation
- Latest lubrication technology provides long seal service life and improves pump efficiency and performance
- No lubricator required for air drive source
- Stainless steel tie-rods and hardware
- Stainless plunger coated with a proprietary multi-layer carbon based coating with diamond like carbon exterior layer:
 - High hardness (3 times harder than Stellite)
 - Inert, it has superior chemical compatibility and corrosion resistance
 - Low friction that limits seal wear and increases efficiency (coefficient of friction equal to or less than PTFE)
 - Tough coating that provides long plunger cycle life.
- Pressure head specially designed and engineered for high cycle life
- Spring energized U-cup seal provides better sealing performance at wide ranges of pressures
- Extended service life check valves with Ceramic balls for high pressure applications

ASL SERIES Single-Acting, Single or Double Piston Air Drive

Features:

- Pressure Ranges from 1,600 to 60,000 psi (110 to 4100 bar) max
- Operating Temperature Range: 0° to 140°F (-18° to 60°C)
- Pressure Head Material: 15-5 PH Stainless Steel
- Plunger: Stainless Steel, coated with proprietary multi-layer carbon for long life
- Liquid Side Material: All Stainless Steel Construction
- Air Side Material: Anodized Aluminum

Technical Data:

- Liquid Connections: Side Inlet Only – see chart (page 9)
- Isolation Chamber: Only available on ASL400-02 pump
- Displacement per stroke: See chart (page 9)
- Liquid Seals:
 - ASL10 to ASL35 = UHMWPE U-Cup and FKM Orings (PV option)
 - ASL60 to ASL400 – UHMWPE U-Cup w/Elgiloy Spring Energizer
- Air Drive Pressure Range: 15-150 psi (1-10 bar) * See Note
- Main Air Inlet: ½” FNPT (Regulated)
- Pilot Air Inlet: 1/8” FNPT (unregulated)
- Max Air Consumption: 70 SCFM @ 90 psi (no pressure)
- Pre-Lubricated Piston at Factory
- Air Seals: Buna-N

Note: *Maximum air drive pressure is limited by maximum pressure shown in chart on Page 9.

Air Drive Connection

All ASL Series Pumps have a 1/2" FNPT regulated main air drive supply connection and utilize a 1/8" FNPT pilot port connection for remote start/stop operation. It is recommended to operate the pilot port at a higher air pressure unregulated than the main air drive supply pressure for proper function.

ACHL SERIES Single-Acting, Single Air Drive with Hand Lever

Manual Operation

Air Driven Pump includes Hand Lever for manual operation or precise pressure control, remote locations, or emergency back-up.

Features:

- Pressure Ranges from 12,500 (860 bar) or 31,900 psi (2200 bar) maximum
- Operating Temperature Range: 0° to 140°F (-18° to 60°C)
- Liquid Side Material: All Stainless Steel Construction
- Air Side Material: Anodized Aluminum

Technical Data:

- Liquid Connections: Side Inlet Only – see chart (page 14)
- Displacement per stroke: See chart (page 14)
- Liquid Seals: UHMWPE U-Cup w/Elgiloy Spring Energizer
- Air Drive Pressure Range: 15-150 psi (1-10 bar) * See Note
- Main Air Inlet: 1/4" FNPT (Regulated)
- Exhaust port (muffler removed) 1/4" FNPT
- Air Seals: Buna-N
- Pre-lubricated at Factory

Note: *Maximum air drive pressure is limited by maximum pressure, see rating show above.

ACHL Pump Part Number Matrix

Typical catalog number: **ACHL72-01SNP**

Note: Individual Pump Specifications can be found at www.Autoclave.com.

Note:

- Each Mounting Bracket includes (2) 11/32" (8.73) holes for 5/16" Bolts.
- Spool air tubing not shown for clarity.
- All dimensions are for reference only and are subject to change without notice.
- Primary Dimensions: Inches
- Secondary Dimensions: (Millimeters)

AFL SERIES Double-Acting, Single Piston Air Drive

Features:

- Pressure Ranges from 5,600 to 15,000 psi (385 to 1035 bar) max
- Operating Temperature Range: 0° to 140°F (-18° to 60°C)
- Pressure Head Material: 15-5 PH Stainless Steel
- Plunger: Stainless Steel, coated w/proprietary multi-layer carbon for long life
- Liquid Side Material: All Stainless-Steel Construction
- Air Side Material: Anodized Aluminum

Technical Data:

- Liquid Connections: Bottom Inlet Only – see chart (page 17)
- Isolation Chamber: Standard on all sizes
- Displacement per stroke: See chart (page 17)
- Liquid Seals: UHMWPE U-Cup w/ optional o-rings (see P/N matrix)
- Air Drive Pressure Range: 15-150 psi (1-10 bar) * See Note
- Main Air Inlet: 3/4" FNPT (Regulated)
- Pilot Air Inlet: 1/8" FNPT (unregulated)
- Exhaust Port (muffler removed) 1" FNPT
- Max Air Consumption: 167 SCFM @ 90 psi
- Pre-Lubricated Piston at Factory
- Air Seals: Buna-N

Note: *Maximum air drive pressure is limited by maximum pressure shown in chart on Page 17.

Air Drive Connection

All AFL Series Pumps have a 1/2" FNPT regulated main air drive supply connection and utilize a 1/8" FNPT unregulated pilot port connection for remote start/stop operation. It is recommended to operate the pilot port at a higher air pressure than the main air drive supply pressure for proper function.

Note:

- Each Mounting Bracket includes (2) 9/16" (14.29) holes for 1/2" Bolts.
- All dimensions are for reference only and are subject to change without notice.
- Primary Dimensions: Inches
- Secondary Dimensions: (Millimeters)

AHL SERIES Double-Acting, Double Piston Air Drive

Features:

- Pressure Ranges from 6,700 to 22,500 psi (460 to 1550 bar) max
- Operating Temperature Range: 0° to 140°F (-18° to 60°C)
- Pressure Head Material: 15-5 PH Stainless Steel
- Plunger: Stainless Steel, coated w/proprietary multi-layer carbon for long life
- Liquid Side Material: All Stainless-Steel Construction
- Air Side Material: Anodized Aluminum

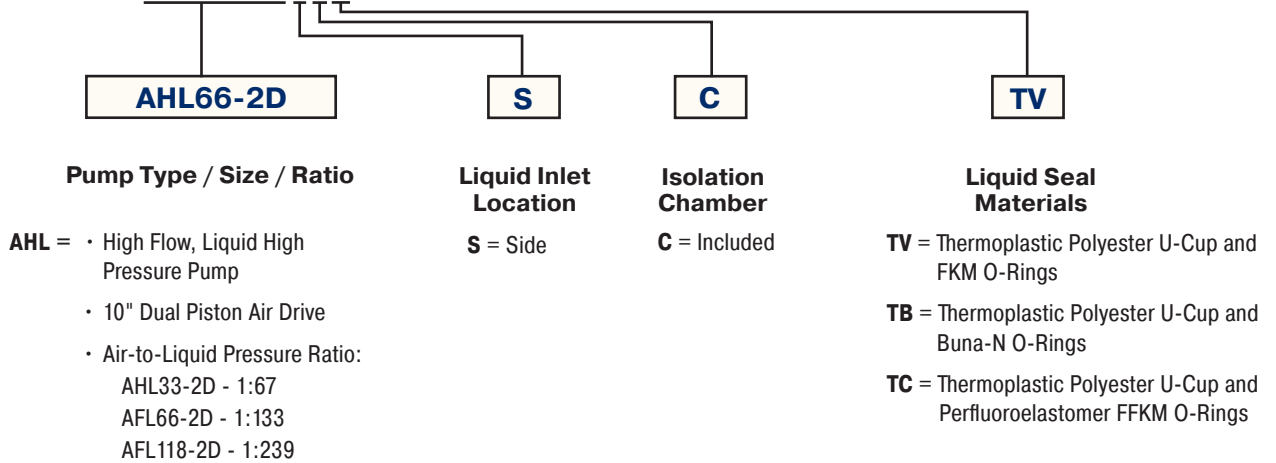

Technical Data:

- Liquid Connections: Dual Side Inlet Only – see chart (page 20)
- Isolation Chamber: Standard on all sizes
- Displacement per stroke: See chart (page 20)
- Liquid Seals: Thermoplastic Polyester U-Cup w/ optional o-rings (see P/N matrix)
- Air Drive Pressure Range: 20-100 psi (1.5-7 bar) * See Note
- Main Air Inlet: 1" FNPT (Regulated)
- Pilot Air Inlet: 1/8" FNPT (unregulated)
- Exhaust Port (muffler removed) 1" BSP
- Max Air Consumption: 290 SCFM @ 50 psi (no pressure)
- Pre-Lubricated Piston at Factory
- Air Seals: Buna-N

Note: *Maximum air drive pressure is limited by maximum pressure

FAILURE, IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application and review the information concerning the product or system in the current product catalog.

Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met.

The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

ALL PARKER VALVES MUST PASS A RIGID OPERATIONAL AND LEAKAGE TEST BEFORE LEAVING THE FACTORY. IT IS RECOMMENDED AFTER ANY REASSEMBLY, THE VALVE SHOULD BE TESTED BY THE USER FOR OPERATION AND LEAKAGE. IF THESE INSTRUCTIONS ARE NOT FULLY COMPLIED WITH, THE REPAIRED PRODUCT MAY FAIL AND CAUSE DAMAGE TO PROPERTY OR INJURY TO PERSONS. PARKER HANNIFIN CANNOT ASSUME RESPONSIBILITY FOR PERFORMANCE OF A CUSTOMER SERVICED VALVE.

Technical & Performance Data Sheet

Manual: 02-9244BE | January 2022

ENGINEERING YOUR SUCCESS.

Technical Data

Section 1.0 Liquid Side Specifications

Service: Oil, Water or Water/Oil mixture and other fluids depending on material compatibility

Maximum Outlet Pressure: 1,600 psi (110 bar)

Air to Liquid Pressure Ratio: 1:11

Volume Displacement Per Stroke: 5.22 in³ (85.5 cm³)

Inlet Connection: 1" FNPT

Outlet Connection: 1/2" FNPT Female NPT

Section 2.0 Air Side Specifications

Air Drive Pressure Range: 15-150 psi (1-10 bar)* **(Note)**

Nominal Air Pressure Required: 1,600 psi (110 bar)

Output Pressure: 145 psi (10 bar)

Inlet Port: 1/2" FNPT

Pilot Port: 1/8" FNPT (unregulated air)

Exhaust Port (muffler removed): 1/2" FNPT

Air Consumption @ 90 psi: 69 SCFM

Prelubricated at Factory

***Note:** Maximum air drive pressure is limited by maximum output pressure.

Section 3.0 General Specifications

Maximum Operating Temperature: 0-140° F (-18° to 60° C)

Net Weight: 38 lbs. (17.2 kg)

Pressure Head: 15-5 PH Stainless Steel

Plunger Description: Stainless steel plunger utilizing a proprietary multi-layer carbon based coating with diamond like carbon exterior layer - 3 times the hardness of stellite with a coefficient of friction equal to/less than PTFE

Check Valve Glands: 316 Stainless Steel

Liquid Seal: UHMWPE U-Cup and FKM O-Rings

Air Drive Seals: Buna N

Technical Data

Section 1.0 Liquid Side Specifications

Service: Oil, Water or Water/Oil mixture and other fluids depending on material compatibility

Maximum Outlet Pressure: 11,200 psi (772 bar)

Air to Liquid Pressure Ratio: 1:78

Volume Displacement Per Stroke: 1.50 in³ (24.6 cm³)

Inlet Connection: 1/2" FNPT

Outlet Connection: 1/2" FNPT Female NPT

Section 2.0 Air Side Specifications

Air Drive Pressure Range: 15-150 psi (1-10 bar)* **(Note)**

Nominal Air Pressure Required: 11,200 psi (772 bar)

Output Pressure: 143 psi (9.9 bar)

Inlet Port: 1/2" FNPT

Pilot Port: 1/8" FNPT (unregulated air)

Exhaust Port (muffler removed): 1/2" FNPT

Air Consumption @ 90 psi: 56 SCFM

Prelubricated at Factory

***Note:** Maximum air drive pressure is limited by maximum output pressure.

Section 3.0 General Specifications

Maximum Operating Temperature: 0-140° F (-18° to 60° C)

Net Weight: 46 lbs. (20.9 kg)

Pressure Head: 15-5 PH Stainless Steel

Plunger Description: Stainless steel plunger utilizing a proprietary multi-layer carbon based coating with diamond like carbon exterior layer - 3 times the hardness of stellite with a coefficient of friction equal to/less than PTFE

Check Valve Glands: 316 Stainless Steel

Liquid Seal: UHMWPE U-Cup and FKM O-Rings

Air Drive Seals: Buna N

**FAILURE, IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN
OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.**

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application and review the information concerning the product or system in the current product catalog.

Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met.

The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

ALL PARKER VALVES MUST PASS A RIGID OPERATIONAL AND LEAKAGE TEST BEFORE LEAVING THE FACTORY. IT IS RECOMMENDED AFTER ANY REASSEMBLY, THE VALVE SHOULD BE TESTED BY THE USER FOR OPERATION AND LEAKAGE. IF THESE INSTRUCTIONS ARE NOT FULLY COMPLIED WITH, THE REPAIRED PRODUCT MAY FAIL AND CAUSE DAMAGE TO PROPERTY OR INJURY TO PERSONS. PARKER HANNIFIN CANNOT ASSUME RESPONSIBILITY FOR PERFORMANCE OF A CUSTOMER SERVICED VALVE.

Manual: 02-9324BE | January 2022

ENGINEERING YOUR SUCCESS.

Technical Data

Manual Operation: Pump Comes standard with Hand Lever for precise pressure control, remote locations or emergency back-up applications.

Section 1.0 Liquid Side Specifications

Service: Oil, Water or Water/Oil mixture and other fluids depending on material compatibility

Maximum Outlet Pressure: 12,500 psi (862 bar)

Air to Liquid Pressure Ratio: 1:84

Volume Displacement Per Stroke: 0.09 in³ (1.47 cm³)

Inlet Connection: 3/8" FNPT

Dual Outlet Connections: Parker Autoclave F250C-1/4" Female High Pressure

Section 2.0 Air Side Specifications

Air Drive Pressure Range: 15- 150 psi (1.0- 10 bar)* **(Note)**

Nominal Air Pressure Required: 12,500 psi (862 bar)

Output Pressure: 148 psi (10.2 bar)

Inlet Port: 1/4" FNPT

Pilot Port: 1/4" FNPT

Exhaust Port (muffler removed): 1/4" FNPT

Air Consumption @ 90 psi Air (0 PSI Liquid): 13 SCFM

Prelubricated at Factory

***Note:** Maximum air drive pressure is limited by maximum output pressure.

Section 3.0 General Specifications

Maximum Operating Temperature: 0-140° F (-18° to 60° C)

Net Weight: 9 lbs. (4.1 kg)

Pressure Head: 316 Stainless Steel

Plunger Description: 440 Stainless Steel

Check Valve Glands: 15-5PH Stainless Steel (SS)

Liquid Seal: UHMWPE U-Cup with Elgiloy Spring Energizer

Air Drive Seals: Buna N

General Information

***Note:** Maximum air drive pressure is limited by maximum output pressure.

Section 3.0 General Specifications

Maximum Operating Temperature: 0-140° F (-18° to 60° C)

Net Weight: 51.8 lbs. (23.5 kg)

Pressure Head: 15-5 PH Stainless Steel

Plunger Description: Stainless steel plunger utilizing a proprietary multi-layer carbon based coating with diamond like carbon exterior layer - 3 times the hardness of stellite with a coefficient of friction equal to/less than PTFE

Check Valve Glands: 316 Stainless Steel (SS)

Liquid Seal: UHMWPE U-Cup with FKM O-Rings

Air Drive Seals: Buna N

General Information

Section 4.0 - Ordering Guide

For complete information on available pump options, contact Parker Autoclave Engineers.

Typical catalog number: **AFL100-1DBCPV**

Pump Type / Size / Ratio	Liquid Inlet Location	Isolation Chamber	Liquid Seal Materials†
ASL = <ul style="list-style-type: none"> • High Flow, High Pressure Pump • 6" Single Piston Air Drive • 1:113 Air-to-Liquid Pressure Ratio • Maximum 15,000 psi (1034 bar) • Single Ended, Double Acting Liquid Head 	B = Bottom	C = Included	* PV = UHMWPE U-Cup with FKM O-Rings PB = UHMWPE U-Cup with Buna N O-rings PC = UHMWPE U-Cup with FFKM O-rings

Section 5.0 - Liquid Flow Rate vs. Outlet Pressure

Actual flow rates will vary depending on air flow capacity, downstream flow restrictions, and fluid type.
